IN SALONICA WITH OUR ARMY

SECOND EDITION.

# LOVE LETTERS OF AN ANZAC

By

TROOPER BLUEGUM

(Oliver Hogue)

*English Review.*—"We have read with delight every word of these letters. . . . Brisk, pungent, full of good things."

*Sunday Times.*—"Forms a document of genuine human and historical value."

*Bookman*— . . . "he relates his personal experiences simply, unaffectedly, and with an easy realism that sets the reader's blood singing, and brings the terror and glory of the whole thing home to his understanding."

*Price 2s. 6d. net. Cloth, with portrait of author.*

## CHAPTER I

### THE BULGAR ON THE HILL

**T**HERE is a hill which rises to the north of the small and ugly village of Ambarkoj, which in its turn is twelve miles north of Salonica. It is not a particularly impressive hill, but it happens to command a good view of the country for many miles around, so I climbed to the top of it, uncomfortably enough by reason of the tangle of evergreen oak, the harsh edges of the rock, and the thickets of brambles. Right on the summit I found all that the birds and beasts and sun and storm of Macedonia had left of a man who must have fallen in one of the half-forgotten wars which have troubled the land. There were the scattered bones. Rags of clothing were embedded in the ground. Close at hand a couple of clips of cartridges

---

## IN SALONICA WITH OUR ARMY

---

proved that he had fallen in the midst of his fight. There was the merest remnant of his cap, and there was a button which showed him to have been a Bulgarian. His rifle had been taken away, but the rest had been left as it fell, left to remain through the years, to be a symbol and token of all that land which one could see standing there beside the tangled rubbish which used to be a man.

It is hard to think of a better place than that for the beginning of some account of the country of which so many tens of thousands of our men are gaining an intimate knowledge, and of their difficulties and sufferings and achievements. From that high place it is possible to see all the different kinds of land which go to make up Macedonia, and to remember all the problems which mountain, valley, and plain present. And those forgotten bones were the witness of the history of the country, of all that past conduct of its affairs, of all its custom and habit—of all those things which are producing so direct an effect on our life to-day. It may

---

## THE BULGAR ON THE HILL

---

not appear that there is any connexion between a dead Bulgarian on a little hill three thousand miles away and the war-time price of sugar in England, and yet the connexion exists, and will be made plain later on.

If you were to stand where I was standing and face the north, you would have on your left a great plain rolling away to a blue wall of distant mountains in the west. Immediately before you, but still a little to the left, you would see a line of trees and a fresh green in the herbage which would prove the presence of water with occasional swamps. Due north and on all the right would be the hills, some of them smooth and gentle, some of them great grey mountains. Between them you would find the little valleys, and the occasional habitations of men.

One valley there is in particular. It lies at the foot of the hill which, indeed, closes the southern end of it. From the line where the evergreen oak ends it sweeps downward very gently and delicately for about a couple of miles to where a tiny village stands at the

---

## IN SALONICA WITH OUR ARMY

---

foot of its eastern slope, and then winds out of sight round a westerly bend. On either side it is fenced by considerable hills. They rise about it, very grim and forbidding. It is not an easy valley to enter from any direction, and in consequence it has all the appearance of prosperity and comfort. The soil is cultivated. There are the wide fields of maize, and the great patches of tobacco. In one part of it I found a whole series of plots given over to funny little plants which made me realize for the first time that the tomato and the vegetable marrow are very closely related to each other. There is abundant pasture. Two small square towers of whitish brick mark the presence of springs, and all the appearance of the ground proves that you could find water anywhere by sinking a well twenty feet deep or less. The houses of the village have a settled, established appearance, very unlike that of the flimsy mud-plastered hovels of Ambarkoj. It looks like a place where the generations have followed each other in peace, and that is very

---

## THE BULGAR ON THE HILL

---

unusual in Macedonia. The bones of the dead Bulgarian are there to explain why such tranquillity is unusual ; the sheltering hills give the reason for the happiness of this one village.

All that delightful valley is a picture of what Macedonia might be, and the most insistent reminder of what it is not. Even the people are different. Wandering down the length of it one day I found two women and a man working in the fields, with two great black pigs frisking and gambolling round them like a couple of terriers. I asked some question about water, and they stood up and answered to the best of their power, frankly and courteously. The day after, in another village across the hills and down in the plain three miles to the west, I tried to buy some eggs, and met with nothing but glum silence, averted eyes and closed doors. They were the people of the plain, whose homes lay open and defenceless ; they were a people accustomed to war.

As the village of the hills stands for what

---

## IN SALONICA WITH OUR ARMY

---

Macedonia might be, so does Karadza Kadi, the village of the plain, stand for what it is. It is a village which knows and obeys the law of that war-troubled land. The homes of its people are poor, mean structures with never a hint or trace of beauty or security about them. If they were burnt down and destroyed it would be no great loss, for they could be rebuilt so easily. All around stretch the miles of utterly fertile land, but only tiny patches are cultivated. The approach to the village might easily be made into a good safe road but it is left a wretched, half-obliterated track swamped with water and mud at every time of rain.

For this is the law of Macedonia, that you shall not build yourself a secure and costly home which your enemy may at any time destroy or take for himself; you shall not plant great fields or any more than is strictly necessary for yourself lest your enemy come and reap your rich harvest; you shall not make an easy road to your home lest your enemy come down it swiftly to your destruc-

---

## THE BULGAR ON THE HILL

---

tion. It is better and safer to have so poor a house that it is not worth the burning, so small a crop that it is not worth the gathering, so painful a road that it is not worth the travelling. That dead Bulgarian explained all these things. The poor confusion of his bones was the witness that this country has not ceased to be ravaged by war, that it has known no accustomed peace, that its people have not dared to surround themselves with those permanent things which are the mark of happier lands.

There can be, one imagines, few more fertile countries in the world, and few indeed in Europe. All sorts of rare, desirable things will grow on its soil in splendid profusion. Maize is a most flourishing crop. Tobacco is grown here which is valued all over the world. Such things as the little grapes which are turned into currants and raisins thrive on the hillsides, and there are the plantations from which comes attar of roses. There does not appear to be any end to the possibilities of Macedonia. Civilized nations

---

## IN SALONICA WITH OUR ARMY

---

spend millions in reclaiming land in far countries, in clearing it of swamps, mosquitoes and malaria, in perfecting systems of drainage and irrigation, and yet here is this rich land, in Europe itself, barren and desolate, given over to thistles and scrub, with the poison of fever haunting every valley, with miserable tracks instead of roads—wasted altogether.

For Macedonia to-day is not very far from being a wilderness. Before the army came to Salonica there was scarcely a road worthy of the name between the sea and the Bela Sitza range and the Struma. There are the hundreds of square miles that might be so busy growing food for man and beast, and they grow nothing but thistles. The hillsides might be rich with vineyards, and they are desolate with evergreen oak. There is water everywhere, and it is allowed to serve a little space and then to wander aimlessly to the sea. There might be herds of great cattle and mighty flocks of sheep, but all you shall find is a few tiny cows, a few attenu-

---

## THE BULGAR ON THE HILL

---

ated goats, and a few scraggy, fleshless sheep. Each wretched village worries along as best it may, a self-contained community, having little traffic with the outer world. And between the villages there sweep the miles of the wasted land. Wasted because here is no security of tenure, no consecutive rule, no assurance that he who sows shall also reap. Wasted because it is a country where you may find the bones of the dead on the tops of little hills.

And in addition to being wasted, the country is poisonous. In every low-lying, swampy area the mosquito finds an admirable home prepared ; and there arises the problem of malaria. Modern science understands how to deal with that problem. Macedonia could be cleared of it as other countries have been cleared. Drainage and the discipline of fire would make the country free—only there has been no one sufficiently interested in the country to take the matter up. The natives, I suppose, are accustomed to fever, or perhaps they develop immunity. No one from

---

## IN SALONICA WITH OUR ARMY

---

the outside has been attracted to the place. Even the wildest American millionaire would shrink from working out development schemes in a country compared with which the average South American republic is a model of stable and constitutional government. People have been fighting in and for and about Macedonia from the dawn of history, and so we have it as it is to-day.

That such a land should be in such a condition is a fact that arouses a very bitter kind of anger. Few of us, perhaps, have brought, or will bring, pleasant memories away from it, but that is the fault, not of the land, but of the circumstances which have made it what it is. And in spite of the things we endured in it, we shall probably remember as the years pass by that it is a country which has great beauty, grandeur, and an appealing loveliness, as one moves from place to place and learns all the variety of it. We shall remember again the wooded slopes of Kotos, Ajvasil resting so happily on the border of the lake, the dim mountains that hide Fort

---

## THE BULGAR ON THE HILL

---

Rupel, and the little streams that run in secret valleys. We shall remember such things as these ; perhaps we shall forget the unpleasant facts. But those unpleasant facts are the things which have to be remembered at this time, and in any future considering of the Salonica campaign ; for they have the power to condition and to limit every operation that has been or will be planned. They are more potent to hinder than all the strength of the enemy. When our rulers decided on the expedition they opened war not against man alone, but also against Nature—Nature neglected, misused, spurned. The generations to come may ask why they added such a task to the burden we were already bearing. It is not my business to ask that question, but—the fact must be borne in mind, for if it is not remembered there may be heavy injustice to those who were charged to carry out the adventure.

An army is a large and complex thing with innumerable needs. If you send it to any distant place you must either be prepared to

---

## IN SALONICA WITH OUR ARMY

---

supply those needs or else be very certain that they can be supplied on the spot. Whether or not the fact was realized, one cannot say, but a fact it is that scarcely a single need of our army in Macedonia can be supplied on the spot. I cannot, indeed, remember a single article that was bought in large quantities from the inhabitants except forage. That was rounded up and stacked—under guard—at convenient places, but there was little or nothing besides.

The land has no food to give us. The great spaces which might have grown corn are, as I have said, busy with thistles. The cattle are so scarce and of such shocking quality that if the army had begun to eat them they would have been extinct in a week and the troops would have been mutinously demanding bully beef. All our corn and meat came, and still must come, across the perilous sea. There were, of course, such trifles as melons, eggs and tomatoes and occasional fowls, but all that Macedonia can give us to eat is the merest drop in the bucket.

---

## THE BULGAR ON THE HILL

---

Every fresh battalion that is sent to Salonica means that more ships must bring food behind it, and keep on bringing it so long as it remains there.

And not food alone, but everything else which an army can possibly require. Guns and ammunition must be brought as a matter of course, but there must be also all clothing, every detail of equipment, tools for every imaginable purpose, materials for putting up wire entanglements—there is not enough wood in the country to form the uprights—and all sorts of hospital stores. Paper, pens and pencils, books, bacon, baths, soap, candles, tobacco, matches—all such things must be brought across the sea. Galvanized iron, wagons, mules, telephone wire, water buckets and bivouac sheets—every imaginable thing. For the one thing certain about Macedonia is that you will not find in the country anything that you want.

The relation between that dead Bulgar and the price of sugar in England is, perhaps, becoming apparent. Because so many ships

---

## IN SALONICA WITH OUR ARMY

---

are busy carrying things to the Salonica army there are the fewer to fetch and carry for the people at home ; the traffic of the seas is diverted, and Britain has to put up with the consequences. But if, on the other hand, Macedonia in the past had been free from war, with power to fulfil its own enormous possibilities, half the stuff required might have been bought on the spot, and half the transport saved.

But that, after all, is a side issue. The problems of sea transport are the problems of the people who sent us there. My concern is only with our own problems, those interesting puzzles which began as soon as the stuff reached the wharves at Salonica, and which do continually perplex and worry all sorts of people, high and low, and must be the greatest trouble General Sarrail has ever known. For we came to a country without roads, and undertook to push armies into that country along tracks radiating as do the sticks of a fan. A country without bridges also, and one in which the most

---

## THE BULGAR ON THE HILL

---

innocent trickle of a stream may whirl up into a great river in the course of an afternoon. A country where a way had to be found across swamps, and over great hills—a way where no way had been before.

And a modern army cannot be content with mere tracks, trodden down though they may be by bare feet and unshod bullocks through the years. A modern army has heavy, cumbersome things to carry with it—great guns, ammunition limbers and the rest. These heavy things drive the tyres into the ground till at last a swamp is reached which cries a halt to all adventuring. Moreover, a modern army in a wilderness has to be fed. If it will advance, then food must be brought up to it, day after day. There must be rations enough for all the men, forage for all the animals, material to repair all the inevitable wastage of war. These things must be close up to the troops and instantly available. They must follow close behind each new advance if the ground once taken is to be held. If its transport breaks down the army

---

## IN SALONICA WITH OUR ARMY

---

is defeated and must inevitably retire, or die most uselessly where it stands—and an army which dies uselessly is rather worse than no army at all. It comes to this, that if you cannot keep your army supplied you must not send it forward.

That was the first problem of the Salonica expedition, and it is still and will always be the chief difficulty in the way. Standing there beside that dead Bulgar one could realize it all so clearly. Transport was not so great a difficulty when he lived and died. Heavy artillery was not of the first importance and, to a considerable extent, armies could live on the land which they occupied. A man could go out with his ammunition and his rifle and a loaf of bread and do his work for days on end. His campaigning did not call for well-made roads and strings of motor lorries. It was a simple matter of skirmishing men, of good shooting, and desperate unrecorded little conflicts.

But that old order has changed. The Bulgar of to-day digs himself excellent

---

## THE BULGAR ON THE HILL

---

trenches from which he must be shelled with heavy guns. To aid him he has all sorts of German guns, brought up along carefully prepared roads to the selected positions. For a defence he has the almost impassable country before him, so that he can deal at leisure with his enemies as they advance to the attack. That, at least, was the state of things at the beginning of the Salonica adventure.

## CHAPTER II

### ROADS AND THEIR MAKING

**E**ASTWARD from Salonica runs the road which leads at last to Stavros and all the land which controls the mouth of the Struma. Some five miles out from the town it passes through the village of Kireckoj.

It is a fine road, one of the best which the army has made in all the country. Broad and smooth it sweeps onward and upward, threading the valleys which lead at last to the Hortiack plateau. But when it comes to Kireckoj it is beaten altogether, forced to remember that it is in Macedonia and most unkindly reminded that it cannot behave as a road might in a civilized country. I shall never forget the surprise and amusement and understanding which came in due succession when first I marched up that road

---

## ROADS AND THEIR MAKING

---

and encountered that obstructive village.

We had been coming so freely and easily, with room and to spare for the passing of all the bustling motor lorries which raced to and fro. The surface was so good that marching was easy. The gradient had been so excellently contrived that we climbed without effort higher and higher into the heart of the hills. And then quite suddenly we saw a few houses before us. Our road disappeared between them, and a private, with the armlet of the military police, stepped forward and stopped our little column. In a little while we realized that he had a companion who was busy at the side of the road with a telephone. Presently another body of marching men appeared, and when they had passed we were told that we might go on.

We passed between the houses of Kireckoj. Our fine, broad road had vanished, strangled in mid-career. In its place we had a narrow, winding track that worked a zig-zag course upwards and onwards. If we met a little native cart we had to pass it in single file.

---

## IN SALONICA WITH OUR ARMY

---

How motor lorries ever contrive to get through the place I cannot imagine. It must be a far longer and more trying performance than the rest of the five-mile run to Salonica, yet scores of them accomplish it daily. When at last we came out at the other end and recovered our road we found another policeman and another telephone operator stationed at the side of it, and then we understood. They were on duty there all the time to prevent collisions in the village. They were the signalmen of the road whose duty it was to see that no one went forward from either end unless it was certain that the way was clear.

There could not be a better illustration of the contrast between Macedonia as it is and Macedonia as the warfare of to-day requires it to be, or as, indeed, modern civilization requires it to be. As Eastern villages go, Kireckoj is very good indeed. Planted in the security of the hills, its houses are well built and substantial. It is quite unusually clean, its shops do not wear the general

---

## ROADS AND THEIR MAKING

---

Macedonian air of being utterly ashamed of themselves, and its people appear to be happy, prosperous and unafraid. But there was that horrid little winding street, a silent witness to that hatred of free movement and development which marks the East, a barrier to trade as well as to war, the symbol of a people who are content if only they are allowed to live in a close-packed little circle remote from the striving of the world.

They may be right, of course. That is a question with which I have no present concern. The only point of immediate importance is that their symbolical street is a confounded nuisance to soldiers who have a war to worry about. It was well enough, no doubt, in the days before artillery reigned on the battle-field and hiding carefully behind the corner of a house the soldier shot his less cautious enemy and advanced to the next corner. But it is not at all well now, as any gunner can testify who has tried to take a battery through that serpentine alley.

I have written so much about Kireckoj,

---

## IN SALONICA WITH OUR ARMY

---

not because it is exceptional, but because it is so thoroughly typical. It is a village of the very best type, and yet it turns the march of an army into a sort of inglorious obstacle race, and all the villages of Macedonia have the same awkward characteristic. I do not know one with a road running clear through from end to end. Salonica itself has streets which twist and turn in every direction.

This was one of the facts which had to be considered when the plans were made for pushing the army forward. It is natural when one is making a road in a new place to follow any existing tracks. Those tracks have usually been chosen by the wisdom of the centuries because they afford the easiest way of getting from one place to another. The folly of men is certainly stupendous, but you don't get people toiling along a difficult way year after year when an easier and safer way is open to them. Therefore it would have been natural for the new roads to follow the old paths, but the nature of these obstructive villages made such a simple course very

---

## ROADS AND THEIR MAKING

---

generally impossible. In the particular case of Kireckoj it could scarcely be avoided, for the valley in which it lies is so narrow and precipitous that there was no room to swing round it on one side or the other.

What sort of a task the engineers must have had who planned the first roads out from Salonica one can only imagine by studying the obstacles which they avoided or overcame, the expedients to which they were compelled, and the occasional awkwardness of their results. Out in the country beyond they could, of course, work with a freer hand. On the waste land between the villages you can put a road practically where you like, and the villages themselves can usually be avoided.

But there, where there are no dwellings to be respected, no claims for compensation to be considered, there are other problems, no less intricate and baffling. Nothing but personal experience could teach the unkindness of those problems, but any man who served for any length of time in the Salonica

---

## IN SALONICA WITH OUR ARMY

---

army will remember and understand. All of us had our turn at road-making at one time or another, and it is more than likely that all the troops at present in Macedonia or who may be sent there in the future will have the same tasks to perform, for as I have tried to insist, roads are the first essential. Somehow or other they had to be made, improvised or improved as the army pushed forward, with all its inevitable guns and lorries and limbers, trailing along behind.

There is one stretch of road in Macedonia which I shall be remembering with mingled hatred and affection all the days of my life. When we came to the place and pitched our camp on the hills above, nothing at all had been done. Probably some one at General Headquarters had drawn a line on the map from one point to another and said, "Make a road here," but that was all. The rest was left to us and the engineers who were our rulers and instructors for the time being. It was our job, and we were to get on with it as best we could.

---

## ROADS AND THEIR MAKING

---

High up on the right the great grey hills were piled ; on the left ran the river, with the wide plain beyond. When the engineers went out to mark the track of the road they looked at the hills and shook their heads, went down to the river bed and shook their heads again. I was new to Macedonia in those days and I had never seen one of the storms which are so characteristic of that violent country. Also I was puzzled by the fact that considerable boulders were strewn about at the foot of the hills, some of them almost as far away as the bed of the river. It was difficult to see how they had come to roll down the slope and across so much level ground. . . . After a time I realized that they had simply been swept along by the torrents of water rushing down the hills, and the difficulties of the engineers began to appear even to me.

They went to and fro, those trained and competent men, studying the ground with quick, accustomed eyes. They studied the ground about the river till they had decided

---

## IN SALONICA WITH OUR ARMY

---

on a line above which the water was not likely to rise ; they studied every turn and swerve of the slope coming down from the hills till they had found where the descending water would pour on to their road, and where it would be safe from such attacks. Presently they were marking out the track, and appointing places for bridges and culverts, ordaining cuttings and embankments. There was a magic in their curt sentences which in the end had the power of making one see the road as it would be—as indeed it is to-day—although one could not in the least understand how it was to be done, what material was to be used, where it was to come from, or how it was to be brought to the required position. As I have said, I was new to Macedonia, and all these things were mysteries. I had not at that time begun to learn how much can be done with very little in the way of tools or material.

The next day we were busy opening a quarry. The great advantage of working in a wilderness is that you can take such

---

## ROADS AND THEIR MAKING

---

liberties with it. If you desire to remove a mountain and throw it into a valley it is not necessary to get permission from the landlord before you begin. The engineers chose a place in the hillside and we set to work to clear away the scrub and the thin layer of earth which covered the face of the stone. Down below a space was cleared where the stone could be stacked, and the chubby youth in charge of the operations remarked airily that as soon as it was in good working order we should be getting out a hundred tons a day.

If there is anything which the British soldier cannot do, I should like to know what it is. Ours was not one of the pioneer battalions which is supposed to understand such jobs as this and draws extra pay for doing so. The men were just ordinary—which means extraordinary—soldiers, and they set about their work as though they had been quarrying all their lives. There were the rifles piled in ordered ranks on the ground below to prove that they were the

---

## IN SALONICA WITH OUR ARMY

---

servants of another trade, but they wrought with pick and shovel in expert fashion, and afterwards with hammer and drill, boring for the charges of blasting powder. The holes were filled and tamped, with the fuses in position, and we all went back to the camp to eat, to swallow large quantities of vigorously chlorinated water, and to rest in such shade as we could find through those mid-day hours when the sun seems determined to burn up all Macedonia. Only the engineer remained behind to light the fuses, and the only victim of the explosions was a sorrowful sheep which seemed to have made a hermitage for itself just above the place where we had been working. We found some of it when we went back in the late afternoon. There is nothing at all to be said for Macedonian mutton.

Day by day the quarrying went on, and in the meantime one of the engineers had dressed himself carefully and gone in to Salonica to talk to people in authority. Presently he came back, and in his train

---

## ROADS AND THEIR MAKING

---

came various interesting, useful things. Wagons began to roll up, carrying little trucks, lengths of rail, and more tools. By the time we had got a great pile of stone erected at the entrance to the quarry, another party was busy clearing a track down to the road half a mile away, fixing the rails to sleepers, cutting sidings, and generally making a most adequate little tramway. In less than a week the little trucks were running down the line filled with stone which was emptied into wagons at a cunningly contrived loading place and carted away north and south. The empty trucks were hauled back to the quarry by mules, and all day long the busy work went on, and the road took shape and form along the way which other toilers had prepared.

We learned many interesting things about the qualities of the stone of Macedonia in those days, when we left the quarrying to others and proceeded to become road-makers. But first we learnt how the surface must be prepared before the stone was put on it.

---

## IN SALONICA WITH OUR ARMY

---

With pick and shovel we attended to it, first marking out the straight run of the road, then clearing off all the scrub and grass which might be in the way, and next digging down at each side and making a careful slope up to the centre so that the camber might be all that could be desired.

Every few yards there were little drains to be cut so that the water might not lie under the surface of our road, and there was a ditch to be dug along each side of it. All the little gullies which crossed it had to be provided with drains—long wooden tunnels with big stones packed around them. For the protection of these drains it was necessary to build breakwaters across the gullies a couple of yards or so away, piling more big stones loosely together, so that when the storm sent a descending torrent some of the force of it would be broken and it would only be able to trickle gently through. Then, when all these preparations had been carried out, the road itself could be attended to and we wrestled with the piles of stone which the

---

## ROADS AND THEIR MAKING

---

wagons had dumped by the side of it while the watchful engineers walked to and fro and saw that everything was done in the right way.

First came a layer of large pieces of rock, comfortable lumps as big very often as a man's head, till the whole surface was the most distressing processional way that any pilgrim of the past could have desired. The morning after a good stretch of that ferocious paving had been completed, we found, when we went down to draw tools for the day's work, that each of us was to be furnished with a hammer. Then was made clear the difference between experience and inexperience. Those who were old at the game looked over the pile of hammers carefully, and chose little ones, stubby little chaps with short, stumpy handles. Some of us, on the other hand, had enlarged ideas about our own strength, and a deal of sincere ignorance, and furnished ourselves with implements with which Thor might have been content. We had yet to learn that breaking stones is

---

## IN SALONICA WITH OUR ARMY

---

quite a scientific game, depending not at all on great muscles or mighty, smashing blows.

We went down to our road and scattered ourselves along it, each man before a pile of the rock that was waiting by the side, and set to work. It was very early in the morning when we arrived, but as the sun climbed higher, tunics came off and sleeves were rolled up and the bronzed faces were wet and shining, while the clatter of the hammers never ceased. Then did we foolish ones with the big hammers realize that to the stone-breaker the wrist is more important than the biceps, and while the little ones went tapping merrily on the beat of our preposterous weapons grew slower and slower and our piles of broken stone seemed never to increase. Four hours of breaking stone with a big hammer is enough to put any man out of conceit with his own strength and to set him devising all sorts of straps and bandages for his tormented wrist.

But with a well-chosen little hammer it is a pleasant job, as I found later on. There

---

## ROADS AND THEIR MAKING

---

is such satisfaction in the gradual increase of knowledge which teaches one at last the right place for the blow to fall and the exact amount of force required so that the stone shall be shattered into fragments of the required size ; it is so comforting to attack a great piece of rock with repeated little blows till all its joints are loosed so that one sharp stroke at the right moment sends it tumbling in all directions. One can sit there, working away, dreaming of all sorts of remote and happy things. I know now why so many of those gnarled old men whom one used to find breaking stones by the roadside in England a quarter of a century ago were so placid and happy, looking out beyond the world with eyes that smiled. One can imagine many less secure refuges for a tortured heart and mind than a pile of stones by the wayside and a little hammer, with the high sun over all.

Well, we broke our rocks into little pieces, and scattered them over the surface of our road till all those big foundation stones were

---

## IN SALONICA WITH OUR ARMY

---

covered three inches deep. Above them we scattered earth that it might work in with them and bind them together, and the wagons began to pass to and fro along the way we had made. It may not have been road-making according to the best modern ideas, but there at least was a highway, apt and adequate for the service of either peace or war.

## CHAPTER III

### THE SERES ROAD

ONE road there is in Macedonia which dominates all the rest. It is so much more important than the others—though many of them have great value and are indeed vital to the needs of the campaign—that it is frequently referred to without any mention of its name. So you may hear one man say to another, “Oh yes, that happened just by the twenty-fifth kilo.” Every one understands. To the uninitiated it might sound as if there was in all the country only one stone which marked twenty-five kilometres from Salonica, but every one who has been out for any length of time knows perfectly well that the Seres road is referred to, that long highway which runs from Salonica north-east to the Struma and

---

## IN SALONICA WITH OUR ARMY

---

then, after crossing the river, swings southward to Seres.

That road has played a big part in the campaign, and will continue to do so to the end. A glance at the map will show the reason. It is the one way of approach to a very considerable portion of the Struma front. All the men engaged on that front must pass up the road to their work, and all their supplies of every kind must follow them along the same way. There is not a yard of railway available in this direction. It is true that men and material for the district commanding the mouth of the river can be taken round to Stavros by sea, but for the furnishing of the chief part of the line the Seres road is wholly responsible, and some knowledge of it is necessary to any clear understanding of the progress and difficulties of the whole adventure. Ignorance of the nature of the road has led to a great deal of misunderstanding in the past, and more has been expected of the Salonica armies than they could have accomplished.

---

## THE SERES ROAD

---

Very many soldiers are introduced to the road as soon as they land. There is the day of disembarkation down there at the edge of the bay, and the march through the evil-smelling, badly paved town. For two or three days they wait at the base camp, going for short marches, finding out all the customs of the country, and learning not to expect the appearance of a portable church every time the ringing of numerous unseen bells heralds the appearance of a flock of goats. Then, if their division is on the Struma, they march out one morning northwards past Lembet on the first stage of their fifty-mile journey. And if they are fresh troops just out from England and have arrived in the summer they do not enjoy it at all. They may get as far as Güvezne, fifteen miles out, in comparative comfort, but once they reach that spot and encounter the hills, their troubles begin.

It is all so new, so strange, and so very uncomfortable. There is the rising at painfully early hours in the morning so as to get

---

## IN SALONICA WITH OUR ARMY

---

well on the way before the heat becomes too fierce for marching. Then there is that terrible time in the middle of the day when one searches in weary despair for some kindly touch of shade, when the heat and the flies make sleep impossible, when the only thing with which thirst can be relieved is chlorinated water which seems, in those early days, to parch the throat and mouth. And in the evening, when it might seem possible to rest in the blessed relief of the cool twilight hours, there is the need to get up and press forward once again, coming in the darkness to camp in a strange place where no one can find the water supply, and the cooks take hours fumbling through the dark to prepare any kind of a meal. It needs an uncommonly stout heart to stand the strain of those initiatory days. The Seres road in summer can be very unkind even to seasoned troops accustomed to the country. For newcomers it is the most searching kind of test.

I have seen them so often, new drafts fresh from England, toiling hopelessly up

---

## THE SERES ROAD

---

those unending steeps, choked and blinded by the dust of the lorries and ambulances which are racing to and fro all the time. All that they are feeling is written so plainly on their faces. They are so far away from home and all the beloved, accustomed things. Enthusiasm and love of adventure might have carried them triumphantly through some wild brief rush in France, but in this there is no adventure. Here is no glory, no swift conflict and immediate service. This is nothing but dull, unending toil, with all the pains of thirst and weariness in a strange and friendless land. Those are the hours when the weight of the pack becomes an intolerable burden to the young soldier, and the rifle seems a fiendish encumbrance devised with infinite skill to torment its owner. At that time everything tends to provoke a fierce, unreasoning anger. The shape of the head of the man in front appears to be utterly detestable, the carriage of the man on the left is a torment. We all know that hour, we who have learned the obedience of war

---

## IN SALONICA WITH OUR ARMY

---

and have had to pass through that flaming test to find the indifference to bodily discomfort, the disregard of hardship and fatigue which are the gifts which his life does at last bestow on the soldier. But it is very hard to meet that hour and the Seres road at one and the same time.

It is too much for some of them. They get permission to fall out, and their position is, if anything, rather worse than before. They are alone now, but still the journey must be completed. In the days of training in England, to fall out on a march often meant a lift from some friendly carter, or perhaps a drink at some cottage door or a few apples—but here there is nothing. The lorries are pounding by, but they are much too busy to stop and collect people who are merely tired. There is no sign of any water, nor of any habitation of men. There is only the long road winding up the eternal hills, and all the burdens still remain to be dragged after the vanishing column.

And then, perhaps, the youngster realizes

---

## THE SERES ROAD

---

that he has been a fool. The others will have reached camp and food and drink and rest long before him. They will be taking their ease while he is still toiling on ; when he arrives there will be no sympathy, but those who endured to the end will sneer at him, and officers will be demanding explanations. . . . I fancy that a great many men will put down the most painful hour of their lives to the account of the Seres road. Some of us, saved by strength or determination or sheer cross-grained temper, have managed always to keep our places on the march, and so know nothing of the misery which must surely come to the man who falls out, but I fancy that even we give thanks that it is not possible to march up that road for the first time twice over. Those who have been there will know what I mean.

But the Seres road is not content with tormenting newcomers and teaching them with exceptional severity that sharp lesson which every soldier must learn before he is a man-made and approved. That is only one

---

## IN SALONICA WITH OUR ARMY

---

of its activities. It also contrives to be the greatest possible nuisance to people high in authority.

Fifty miles of an English road, running smoothly over a fine surface, with none but gentle slopes, is not such a very serious matter. If, for instance, the Seres road were such as that great highway which runs from London to Aldershot, it would be almost as good as a railway—better in many respects. Supplies could be whirled up to the front without difficulty, and the wounded could be brought back without pain. The swift lorries could hurry to and fro all day long ; there would be no discomfort for the marching men. Given transport enough, an army of almost any size could be provided with all the material of every kind which it required, without any peril of delay. But this road of ours is worse than anything that there is to be found in England.

It would be hard to make a map on a scale large enough to do full justice to the difficulties which it has to encounter. The hills

---

## THE SERES ROAD

---

which lie in its way are the most resolute foes of traffic that any one could imagine. There is no simple matter of climbing up one long slope to the highest point at Lahana and then running pleasantly down on the far side. It has to get across not one hill but an utterly mad tangle of hills. It climbs up and up, and then loses all it has gained in a wild dash downwards which brings it back almost to the level from whence it started, with all the work to be done over again. And this happens not once but, in seeming, endlessly, and almost the whole of its course is the most violent kind of switchback.

Its hills would be alarming enough if its surface were good, but the surface of the Seres road is atrocious. There is nothing in the least wonderful in the fact, nor is any one to be blamed for it. Everybody knows how our roads in England have to be petted and pampered if they have to bear much fast, heavy motor traffic. The most perfect surface gives way sooner or later under the constant strain and suction of the whirl-

---

## IN SALONICA WITH OUR ARMY

---

ing tyres, and repairs are going on all the time. The Seres road had to start with a surface a good deal worse than that of the ordinary macadamized road. It was made very much in the fashion which I described in the last chapter ; indeed no other fashion was possible. It certainly existed before we came to Macedonia, but in those days most of it can have been no better than one of the ordinary native tracks of trodden earth. The army has laboured over all the length of it and continues to labour, and will have to continue to do so, but what can you do with mere stones and earth to defy the rushing wheels which cut and wrench and tear the surface as fast as it is laid down? It would take something made of ferro-concrete to stand the strain which that road must endure, week in and week out, all the time there is a gun on the Struma which has need of shells, or a man who must be supplied with food.

The rulers of the Army Service Corps may know how many lorries go up and down that

---

## THE SERES ROAD

---

road every day. I cannot pretend to any such knowledge. I only know that it is never free from the grimy, lumbering monsters. I have camped beside it for days at a time, and they were thundering past all the while. Between the convoys there will come the lighter ambulances. Sometimes there will be a battalion marching up with the long train of its transport grinding on through the inches of dust or mud; sometimes it will be a battery of artillery. All day long the road knows no rest; lights are flashing up and down it through all the night. Inevitably its surface is reduced to a condition which would drive an English motorist to suicide—and it is fifty miles long.

So all those people who wonder why Seres and Demir Hissar and Fort Rupel were not taken last summer must be referred to the Seres road for the answer. They must ask the drivers of the lorries; they must inquire from the sick and wounded who endured that journey down in the ambulances. More fortunate than many, I was on the other

---

## IN SALONICA WITH OUR ARMY

---

side of the country when my time came, and I went very comfortably down to the sea in a hospital train, but friends of mine were carried down the road in the Red Cross cars, and I know what it meant to them. The most careful driving and the best springs in the world cannot save a broken body when the way is full of holes and stubborn up-standing rocks.

But the great point so far as operations on the Struma front are concerned is this, that in all your making of plans you are inexorably limited by the power of the road to bear your transport. Even if you had unlimited lorries at command, you could only get so many of them on to the road in a given time. The wear and tear, too, are frightful, and motors cannot last half as long as they would on an ordinary road. And of course the hills and the surface together cut down speed relentlessly, and the journey is a long, painful business.

Bearing these facts in mind, consider how vast are the needs of an army which is operat-

---

## THE SERES ROAD

---

ing on an extensive scale. There will be many batteries, and all of them must be kept supplied with shells. A battery can blaze away in minutes ammunition which it has taken hours to bring up, and once your lorries are empty they must go all the way back before they can be refilled. In Sir Douglas Haig's report on the Somme offensive he told how hundreds of miles of railway had to be laid down in preparation for that great move. We have only fifty miles of a disastrous road and no railways at all. Supplies, supplies and again supplies—that is the keynote of success for the modern army. As your transport is, so will your victory be. The highest skill, the greatest degree of valour, these will be useless unless the material you require is instantly ready to your hand. Deprive your battery of shells, and you had better destroy the guns before they fall into the hands of the enemy.

Shells for your guns and food for your men—these things are essential. And there are countless other articles almost as important.

---

## IN SALONICA WITH OUR ARMY

---

You must have barbed wire for your defences, and wood and galvanized iron and sandbags for your trenches. Bombs must be brought up and ammunition for the rifles. Tools of all sorts must be ready behind the line, and wherever the advance goes the supplies must follow it if you are to hold the positions you have gained. These statements are the merest commonplaces of war as it is waged to-day, but to appreciate the full force of them one needs to be sitting at the far end of the Seres road waiting for things to arrive.

Very wonderful country that is, up there just beyond Lahana, where the whole of the Struma plain is spread below and the great hills stretch away to left and right, some clothed with trees, some bare and grey with the naked rock. If one could just sit and look at it, the prospect might appear to be altogether admirable, and one could find something of pleasure in the far prospect of Demir Hissar and the great mountains which rise beyond. But one has other

---

## THE SERES ROAD

---

business on hand. Down in that plain the Bulgar and the Hun are waiting, and we have to deal with them—and there are the miles of that atrocious, dominating road.

Some day perhaps the full story of the road will be told. I think it would take a driver of the A.S.C. and one of the R.A.M.C. to do it properly, with, perhaps, a chapter from one of those unhappy infantrymen I was writing about just now. Words alone would hardly be able to do it justice, so perhaps the cinematograph might be brought in to assist, and in time the people of Britain might understand something of what is involved in this campaign, how much there has been to do and to endure, how great have been the difficulties, how stern are the limitations. Whether or not the peculiar features of the road were fully realized when the adventure was planned is a question on which the future may possibly throw some light. But it is at least necessary and only fair that they should be generally understood now. The nation should know what

---

## IN SALONICA WITH OUR ARMY

---

manner of task that is which its soldiers are performing, lest there be a tendency to judge without knowledge and to condemn without the evidence for the defence. Last summer the English newspapers were announcing the beginning of a great offensive on the Struma. It would have required several miracles and a few thousand magic carpets to have turned that offensive into anything like the mighty affair which it was to have been in the minds of the innocent and imaginative sub-editors who designed those trumpeting headlines.

## CHAPTER IV

### “PEACE-TIME SOLDIERING”

**A**CTIVE service, from the soldier's point of view, is such a queer mixture of the real thing and of that other business which is contemptuously referred to as “peace-time soldiering.” Our new armies are not fond of peace-time soldiering. The men put on khaki suits for the purpose of killing Germans, and they find it hard to understand why they should not be allowed to get on with that interesting business. Besides, it seems so very absurd to come across the sea to a place where war is actually going on and then to settle down to life in a camp where things are very much the same as they would be in England, except that minor luxuries are hard to come by and week-end leave is a thing of the past.

---

## IN SALONICA WITH OUR ARMY

---

There is probably less of this irritating life in Macedonia than anywhere in the areas of the war, just because the roads need so much attention. In the early days everybody who was not digging trenches was busy on the roads. There was so much to be done, and labour was so scarce that the army was set to navvying as a matter of course. But as the more urgent tasks were accomplished the hated, necessary thing came back and in the camps all over the country men found themselves doing once more the things which they had hoped they might be allowed to forget. For an army has many of the qualities of steel, and if it is to be of the greatest possible value when the time for using it arrives it must be kept keen and bright by constant polishing. If it is allowed to relax and grow slack, there is a peril that it may fail when the time of testing comes, and something more than drill is learnt on the parade ground.

One area there is in Macedonia where peace-time soldiering is specially possible and

---

## “ PEACE-TIME SOLDIERING ”

---

where it is carried out with a deal of energy. The troops which may happen to be stationed for a time on the Hortiack plateau have little to do in the way of road-making, and their commanders take good care that they shall have every chance of reviving the memory of the lessons learnt during the training in England. Indeed it is a kind of polishing station where divisions can be sent in turn to be smartened up and reminded that even if they are on active service, the man who comes on parade unshaven is a very dreadful criminal.

It is a good place for the beginning of one's experience of Macedonia. High above and to the east of Salonica Bay, the plateau rolls along for miles to where Kotos, that excellent mountain, climbs into the sky. People who cherish dim memories of things learnt from geography books at school may be under the impression that a plateau ought to be flat, but there is nothing in the least flat about Hortiack. It consists of endless hills, and though they are not nearly so big

---

## IN SALONICA WITH OUR ARMY

---

as those which torment the Seres road, they are big enough to provide ample exercise for the men stationed among them. On the infinite variety of their slopes the camps hide coyly away, and it is no small adventure to be sent to that area to find any particular battalion. You may find all the rest of the brigade to which it belongs and still fail to discover the object of your search. There are those concealing hills on every hand, and nobody seems to know the exact spot you are seeking. And even when you have been there a week or two the troubles are not entirely at an end, and it is not safe to be too confident in the power of your sense of direction. It is better to keep an eye on the sun and to study landmarks and bearings before you set out to explore those complicated valleys.

Everywhere from end to end of the area one found the busy camps in the days when I knew the place. Remote though it might be from the actual fighting, there was plenty of the sound of war in the air. You see in

---

## “ PEACE-TIME SOLDIERING ”

---

those sudden little valleys there is plenty of space for the more violent parts of training to be carried out without danger to other people, so a trench-mortar battery would be busy in one secluded dell, a grenade school in another, and a machine-gun class in a third. They would be banging away all day long as instructors toiled to perfect the pupils in the art of abolishing the King's enemies. And then, rounding a sudden bend you would come upon a broad, flat space where a battalion was drawn up on parade going through battalion drill just as it might have done in any park in England.

We had a camp which was built on nearly as many hills as Rome, and to get from the officers' lines to the mess involved the descent of one steep little hill and the ascent of another, while the duties of the orderly officer took him up and down stiff, slippery slopes all day long. But it was a fine place, and it was very good to live there, and to be able to sit in the evening looking out over the smooth water of the bay to where Mount

---

## IN SALONICA WITH OUR ARMY

---

Olympus stood, a beautiful, ghostly shape, sixty miles away. And in the bay there were the ships which had left England only a little while ago, and one did not seem so far away from home. There were other advantages, too. Hortiack—its proper name is Hortackoj but we never rose to that pitch of accuracy—is only seven miles from Salonica, and it was possible to get out supplies for the mess, so there was never any lack of those little luxuries which do so much to make life bearable in distant lands. It was also possible to get into the town itself occasionally, though Salonica is not exactly the sort of place one would choose for a pleasure trip. Still it is a town, with shops and restaurants and crowds of people, and after a prolonged course of Macedonia one is grateful for very little.

There were times when we did not altogether appreciate our spell of peace-time soldiering. One day in particular will remain in the memories of some of us as long as we are capable of remembering anything. Some

---

## “ PEACE-TIME SOLDIERING ”

---

one in authority had evolved a tactical scheme on a large scale, and no one realized quite how large that scale was. We were quite accustomed to brigade operations which began at five in the morning and ended at eight, and we thought that customary programme was to be carried out on this occasion and that we should all be back in time for breakfast.

We were ordered to parade at 4.45 a.m., so we were busy getting up soon after four, and even in summer time getting up at that hour on those hills is rather a chilly business. Somehow we groped our way on to parade and marched off. It was about two hours later that we realized that something very unlike the usual programme was contemplated. For we had marched and continued to march altogether in the wrong direction. There was no sign of a swinging round so that our faces might be turned towards home, and we began to wonder with a certain acute interest what time it would be when we got breakfast. So presently we came to

---

## IN SALONICA WITH OUR ARMY

---

the edge of the plateau and halted there, looking northwards over the quiet level of Lake Langaza to the tumult of the hills which lay between us and the Struma. We waited there for a long time, reflected that it was five hours since we had got out of bed, and remembered that in those latitudes no parades are supposed to take place in summer between 10 a.m. and 4 p.m. It seemed reasonable to suppose that we should be sent home immediately, and that we must have completed our mysterious share of the operations.

But no one seemed inclined to send us home. Instead we were thrust out along the edge of a precipice and sent skirmishing back from it over large areas of Macedonia in its most untamed and riotous mood. It was blazing hot by this time, and most of us had got out of the habit of seeing that our water-bottles were always full. By the time we had reached and occupied the crest of a low hill looking towards our very distant home a number of men were sighing for a

---

## “ PEACE-TIME SOLDIERING ”

---

cosy corner in one of the trenches of France, and the rest were inventing suitable destinies for the general who designed the scheme which we were carrying out. I heard a great many suggestions, but none of them were really adequate. After a little further baking on that ridge we moved forward again and occupied another hill. This time we were really getting nearer home, and things looked more hopeful, but the designer of the scheme was a thorough man, and he believed in doing things thoroughly. All at once we were switched off to take part in a wide flanking movement, which included the assault of three more hills, and then we were told that we might go. That last three miles back to camp nearly finished us. We reached the camp a little over ten hours after we left it, and there was hardly any one who had had a mouthful to eat or drink since he tumbled out of bed.

I am not putting this forward as the classic instance of endurance, to be recorded in all military manuals hereafter for ever as

---

## IN SALONICA WITH OUR ARMY

---

a standard by which all future achievement shall be judged. It was, of course, a mere nothing from the soldier's point of view, and that is just why I have written about it. For it seems rather a good illustration of the ease with which all sorts of men have adapted themselves to the soldier's life in these days of the nation's necessity. It is the kind of thing which has been done over and over again since the war began by tens and hundreds of thousands of people who before the war would never have dreamt that it was possible to get up and work hard with their bodies for ten hours without food or drink.

If in the days of peace an employer of five thousand men had suggested that they should accomplish such a feat and had ordered them to do it, there would have been a strike on a large scale, and the employer would have been accused of incredible brutality. But there were many more than five thousand of us, and no one thought of accusing the responsible general of brutality, fervently though we cursed him at the time. We were

---

## “ PEACE-TIME SOLDIERING ”

---

in the army now and it was all in the day's work. We had learnt that we could do something which we had never thought of doing before ; we had gained some information about the power of these bodies of ours to do and to endure without disaster and, indeed, without overwhelming discomfort. As soon as we got into camp we proceeded to learn something about their power to appreciate good food and drink. I have to confess that my share of the performance in the mess consisted of an ordinary lunch—it came first, because it was ready and waiting for us—followed by a very complete breakfast. Somehow it seemed a pity to miss a meal.

So our life went in those days at Hortiack. There was always plenty to do, and yet it was in its way a holiday. Also there were occasional amusements, not the least of which was provided by the Greek muleteers. To drive some of the innumerable mules required to cart the army's luggage about the hills of Macedonia a number of Greeks had been employed. In addition to becoming

---

## IN SALONICA WITH OUR ARMY

---

acquainted with the mules, they were supposed to learn some drill, and a number of unfortunate sergeants had been told off to drill them. Those sergeants did not enjoy life very much. The first thing to be done was to find some one in the squad who knew enough English to translate the words of command, but the sergeant who cannot work off his characteristic sarcasms on his pupils is not likely to be very happy. Besides, the Greeks seemed to have an eternal objection to marching in step. They would go strolling along, with the sergeant bellowing his "Left, Right, Left," and the linguist of the squad making Greek noises to the same effect, but those muleteers took no notice. They did not even trouble to march in time. They sprawled over the ground with happy smiling faces and the most complete indifference to the noisy people who barked at them, and the Tommies stood round criticizing the performances while the sergeants perspired in ineffectual rage.

But there was a better thing than this :

---

## “ PEACE-TIME SOLDIERING ”

---

there was a band. How it came to be there no one seemed to know, but it lived somewhere among the little valleys, and it used to be sent round to give the various battalions a treat on rare, delightful evenings. If you want to appreciate even a third-rate brass band, go to Macedonia for a few months. And this was quite a good band, and it played all sorts of tunes we knew and had been accustomed to hear at home in the days before there was a war, as well as some others which we were assured were the latest favourites and would certainly greet us on our return. The whole battalion would be aware of the fact that the band was going to pay us a visit three days before it was to come, and everybody was waiting for it when it arrived.

I remember the last of these excellent concerts which we had. It was in the hour before dinner, and the musicians had stationed themselves on the top of one of our numerous hills. Some one had sent over to the mess for some chairs, and there had come also a

---

## IN SALONICA WITH OUR ARMY

---

tray bearing bottles—sherry, vermouth, bit-  
ters and gin, those amiable liquids which do  
so excellently prepare the way for a meal.  
So we sat there and listened, and the men  
were all gathered round. Sometimes a  
familiar chorus would be taken up by a  
hundred voices ; sometimes there was only  
the deep, appreciative silence, while the music  
flowed on. For a little while we were home  
again. We did not regard the sea below or  
the evening sky, or the far shape of Olympus,  
or any of those things which surrounded us.  
We were back among familiar scenes, and  
faces we knew were shining at us. We moved  
in our own places and among our own people,  
and for a little while we were content.

## CHAPTER V

### MARCHING BY NIGHT

**I**T is not good to march in the daytime during the Macedonian summer. At times, of course, it has to be done, but whenever possible marches are made by night. There came a day when a party of us were ordered to proceed from Hortiack to Ambarkoj, and we paraded at five in the afternoon, left the camp behind, and came in time to the edge of the plateau looking down once more on Lake Langaza. The sun was setting as we reached the top of the hill; the long shadows were falling across the still water, and darkness was gathering round Ajvatli, the village which stands, remote from the world, on the southern shore of the lake. Between us and the village there ran two miles of one of the steepest

---

## IN SALONICA WITH OUR ARMY

---

hills that even Macedonia can show. We proceeded cautiously down into the darkness which seemed to flow upward to receive and cover us. Presently all that plateau which had been our home for a little while was far above us and out of sight as we worked cautiously down to the level of the lake—for it is necessary to proceed with caution when marching by night in such a country, even when a road is provided.

Newly-arrived troops often find that night marching extraordinarily difficult. They expect too much from our roads. They give them credit for being as the roads of England, and they are grieved when their feet come violently in contact with rocks, or sink into deep holes. Even if one knows the country and its ways it is an awkward business at first, but the human animal is wonderfully adaptable. How it happens I cannot tell, but in course of time one does learn the trick. The feet seem to develop an extra sense, and they find their way over all sorts of obstacles without disaster, so that in the

---

## MARCHING BY NIGHT

---

end you can go adventuring over any kind of ground in safety.

But however sure on their feet the men may be, you can never be altogether certain what the transport will do, and going down steep hills by night is a strain to find out all the weak places. Our particular defect asserted itself before we had got half-way down. It lay in the pole which connected one half-limber with the other, and without warning it tore right out of its socket. Either the wood was faulty or it had been badly prepared. Whatever the reason, there was the crippled limber with half our stores on board, lying across the road, while its agitated mules were dancing the tango round it. A mule can always be trusted to increase any unpleasantness which may arrive.

The main body had gone on ahead in happy ignorance of the disaster. I happened to be in command of the rearguard, so I was intimately concerned with the trouble, for if we could not get the limber

---

## IN SALONICA WITH OUR ARMY

---

on it would be necessary to stay with it all night. That is one of the beauties of life in the rearguard. It is your business to clear up all the litter as you go, and not to move on without it.

By the time the mules had been dealt with and the extent of the damage ascertained, the position looked distinctly unpleasant. Limber poles do not grow on Macedonian hills. It might have been possible to send a man to steal one from a camp we had passed some four miles back, but that would have meant a delay of at least two hours and a half. But one does not need so very many weeks in Macedonia to learn the great, consoling lesson that the British Army will always see you through—always. Never yet have I known it to fail. Whatever the occasion, the man who can deal with it is there, and I knew that on this occasion, too, salvation must be somewhere handy.

It came in the shape of a fiery little company-sergeant-major who had been a trans-

---

## MARCHING BY NIGHT

---

port sergeant in France and knew all about limbers and everything else. He came bustling up and I subsided into a kind of lay figure whose sole business it was to stand and hold an electric torch in the required position while the little man obtained ropes from mysterious sources, performed strange deeds with them and the broken pole, and issued orders at the rate of fifty a minute to my command. He was the man of the moment, and I was quite content to hold the torch for him. You must never interfere with the army when it is getting you out of a tangle. If you do it may be flustered, or, worse still, offended. Just let it alone and wait till the work is done, and then events will resume their normal course.

So at the end of ten violent minutes the little man jerked himself upright and saluted. "Ready to carry on, sir," he snapped, and the procession lumbered forward and downward once more. Ten minutes later we met a panic-stricken member of the main body who had come back to look for us. When

---

## IN SALONICA WITH OUR ARMY

---

you are in charge of all the stores of a company, including the mess outfit, you are not likely to suffer from neglect.

If you pass within half a mile of it and can see it only by the light of the stars, one village is very like another all the world over, and that, perhaps, is why I have an idea that Ajvatli must be a very nice place. It seemed that it might have been a village in England. It was very quiet, with happy little lights shining here and there. It was a place of homes, and since one could not see them one could forget for the moment that the people were Macedonian and of uncouth habits. I never saw the place again, so that dim picture remains, a very pleasant memory of our journey as we turned and made our way westward along the border of the lake.

That was good travelling—night marching at its best. There was no attempt at a road, but we went smoothly forward over thick, close turf. Thorn bushes grew here and there, but there was no obstacle in our way.

---

## MARCHING BY NIGHT

---

On the right lay the smooth black water of the lake, and on the left the ground sloped gently upward to the secret darkness where lay the hills from whence we had come. The air was full of the incessant shrilling of the tree-frogs, but the bull-frogs in the lake had absolutely nothing to say for themselves, which was a comfort. There was once a man in the camp of some little detached post or other in Macedonia who was so pestered by the chanting of the bull-frogs in a pool close by that he arose at midnight and lobbed a Mills grenade into the middle of the concert. Most of the frogs were too dead to sing any more after that, but the camp was awake half the night trying to decide whether or not the remedy was worse than the complaint.

Just by the end of the lake it seemed good to halt for a little food, for it was ten o'clock, and we had another five or six miles to travel. We had not been halted two minutes before the merry fires were dancing at the spot the cooks had selected for their opera-

---

## IN SALONICA WITH OUR ARMY

---

tions, and by that sign you might have realized, had you been there and known the facts, that we were no new-comers in Macedonia.

For Macedonia is a country in which the betting is against your finding fuel at any halting-place. It is true that there are forests here and there, but trees are generally very scarce. In some places there are bushes and scrub, but very often the camp must be pitched on an open plain which grows nothing more substantial than thistles. That is the time when novices suffer, and especially at night. They search miserably and with pain all over the place and find in the end no more than a few handfuls of poor, thin stuff which makes a little blaze and flickers out, leaving the water as cold as ever, and the prospects of tea as dismally remote. But the old hands know better than that. Every bit of wood they pass on the march is collected. You will see men with long, rough sticks tied to their rifles and two or three more in their hands. Sometimes almost

---

## MARCHING BY NIGHT

---

every man of a platoon will be carrying firewood, and when the halt is reached it is all handed over to the cooks. And on this occasion we had done better than usual. The last camp we had passed on leaving the plateau must have been the home of a very fresh and incautious unit, for they had stacked close beside the road a whole pile of bits of packing cases, than which there is no better or more desirable firewood. The temptation had been too much for our boys, and of course we had seen nothing of what happened as we passed, and now their fuel was boiling the water for our tea at a splendid rate.

There was only one drawback to our position on the edge of the lake. From the water, attracted by the flames, came millions of tiny gnats and midges. There were very few mosquitoes, but even so it was an uncomfortable business for anyone who is not fond of eating gnats with bread and jam or of swallowing them in tea. But then Macedonia is no place for people who are too particular.

---

## IN SALONICA WITH OUR ARMY

---

We went on again under the same quiet stars for mile after easy mile. There was no fatigue in that marching, nothing but a little reasonable weariness. The men did not sing. Indeed I heard very little singing on the march anywhere in the country, and none at all from our battalion. But they swung along happily enough, chatting and laughing; there was none of that dour silence which tells that the limits of endurance are being strained. From the distance came the little sound of guns, but whether from the Struma or the Doiran front it was not easy to say. We were too far away, and hills play queer tricks with sound.

At last the column halted. There did not seem to be any particular reason why it should halt. I think every one felt equal to a few miles more, but we had covered twenty from our starting-point and it was an order that we should rest. Some one who had come on ahead and arrived while daylight remained led the different parties to their appointed camping grounds and told

---

## MARCHING BY NIGHT

---

us where to find the water. Once again experience bore witness to itself. With newcomers the settling down for the night in the dark is a terrible business, and people are rushing to and fro for hours, but there was no fuss or delay with our men. Quietly and very quickly they made their arrangements with no need of supervision. Little fires sprang up along their lines and one could catch glimpses of them as they lay, some huddled together, some separately, smoking a final cigarette. But for us the day was by no means over. There were only the five of us, officers of the one company, and the mess president, aided and abetted by the cook, had decreed that we should have dinner when we arrived. Already the cook was very busy with pots and pans round his fire, and one of the servants was spreading a cloth on the ground and arranging packs round it for us to sit on. The company commander was trying to write some report or other with the aid of an electric torch, and swearing distressfully at the same time,

---

## IN SALONICA WITH OUR ARMY

---

when we became aware of an approaching radiance. It was another of the servants, bringing up the lamp to which we had treated ourselves during that little spell of luxury at Hortiack. A beautiful oil lamp it was, with glass and globe complete, and we had been very proud of it. But we imagined that it had been left behind. Glass chimneys and globes are not the sort of things to travel securely in limbers.

“Where on earth did you get that thing from?” asked our astonished commander.

“We just brought it along, sir,” replied the man, and it took a whole string of questions to bring out the fact that one of the servants had carried the lamp, another the chimney and another the globe in their hands for the whole twenty miles. They had their rifles and all their equipment. They had also, you may be very sure, their share of the looted bits of packing cases, and yet they had brought these things all the way. The British Tommy is an incalculable person. Those three, it seemed, were as proud of

---

## MARCHING BY NIGHT

---

that lamp as we had been. They wanted it to go shining vaingloriously over Macedonia and to fill the members of other messes with envy, so they "just brought it along," and they carried it afterwards over very many miles of that uneasy land, till misfortune and a thunderstorm met it at Lahana.

The air was utterly still, and the lamp looked very pleasant burning there so brightly under the stars with our cutlery arranged on the cloth around it. I have had dinner at some curious hours, but I don't think I had ever had it at two in the morning before, yet it seemed more like the end of the day than near the beginning, such was the magic of that pleasant night. And it was a very excellent dinner, for we had some store of our little luxuries, so there were soup, fish (out of a tin), stewed steak, peaches and coffee, and we had some whisky and a few bottles of Perrier. It is possible to be quite comfortable in Macedonia so long as you are near any source of supplies. The trouble is that you are usually so far from anything

---

## IN SALONICA WITH OUR ARMY

---

of the kind that it is only possible to dream of the things you would like to eat and drink and smoke.

But that was a special kind of night altogether, one of those happy times when all goes well. No one seemed in a hurry to go to bed, and when at last I lay wrapped in my blankets under the stars, it seemed almost a pity to go to sleep. The tree-frogs were rioting in an orchard of pomegranates, figs and apricots just behind me, but there was nothing unpleasant at that hour in their shrill calling. The North Star was lower in the sky than it had any business to be, but there was the sense of certainty that presently I should return to my home and all those things from which I was parted for a little while. The distant guns were whispering through the air, but they only spoke of that day when peace shall surely come again to visit and dwell upon the earth.

Far beyond me rose the line of the Seres road and there were the lights of the ambulances as they came rushing down with their burden of broken men.

## CHAPTER VI

### CONCERNING WATER

**T**HERE are quite a number of riddles to be solved when troops are moving about Macedonia, and the most constant of them all is that of the water supply. There is plenty of water in the land—in winter there is far too much—but it hides away in the most irritating fashion, and it has a habit of running in undesirable places. Water usually means mosquitoes, and it is necessary to avoid mosquitoes as far as possible if we are to have any army left in the country.

In summer most of the rivers dry up. If they are really large and important rivers they may keep a little trickle of water running, but it is hardly more than a trickle. The Galika, for instance, is quite an imposing affair when rain is falling. Frequently it

---

## IN SALONICA WITH OUR ARMY

---

cannot be content with one channel but carves itself out two or three in addition to turning wide areas into swamp. But when summer comes it dries up to such an extent that only the scantiest dribble of water connects the little pools which remain to mark its course. There are, on the other hand, a few little streams among the mountains which flow fairly steadily all the time, but these are usually fed direct from springs.

The springs themselves are curious. A geologist would probably find all sorts of interesting things in the country if he were to visit it, and work out the connexion between all these little underground rivers. It is certain that there must be a whole series of such hidden streams. Over and over again one finds springs which well out of the rock, tumble into a little age-worn basin, and vanish. There is nowhere any trace of a stream. The water comes into the light of day for a moment and slips away out of sight. Very probably it comes flowing out from under another rock miles away, pre-

---

## CONCERNING WATER

---

tending that it comes from an entirely different spring. It would be interesting to go round the country with a few gallons of Condyl's fluid, treating these vanishing springs to a dash of colour, and then watching to see where the decoration reappeared.

Certainly this vanishing habit has made things very awkward for the army. Spring water, when it comes direct from the filtering rock, is usually pure and fit for drinking. Especially at times of stress and emergency, there would be a tendency to allow the drinking of such water without restrictions. But when it is realized that what appears to be a spring may be merely a mouth of a subterranean stream, it is another matter. Higher up in its course that same stream may have rippled through the filth of a Macedonian village. Its water may be loaded with micro-organisms which will do terrible things to the stomach of the soldier and render him useless to the army for months. When these things were realized the authorities began to take the water-supply of

---

## IN SALONICA WITH OUR ARMY

---

Macedonia very seriously indeed, and the various medical officers were told that they must be very careful about it. For that, if for no other reason, I should hate to be a Medical Officer.

The battalion tramps into a new camp, hot and dusty from a long march and very, very thirsty. Theoretically, a supply of guaranteed water should have been brought on from the last halt, but that theory breaks down sometimes. There are the crowds of exceedingly thirsty men, and there is a beautiful, clean-looking spring. Between the two stands the M.O. with a nasty little case full of tubes and bottles and similar rubbish, and proceeds to make a test. That test takes half an hour to accomplish.

Of course we know that it is necessary. Any man with any sense will admit as much, especially when he is not thirsty. We know that there may be perils innumerable lurking in that innocent water, and most of us have been too near to dysentery at one time or another since we came to the country to

---

## CONCERNING WATER

---

desire any closer acquaintance. But one is apt to be unreasonable after twenty miles of Macedonia, if the sun has been shining most of the time. Egged on by the craving body, the brain forgets its caution and hints that even if there is a bit of risk the odds are against anything happening, and anyhow the water looks perfectly good—any one who has ever been in a similar position can imagine the course of that mental disturbance.

So quite naturally there arises a hatred and scorn and loathing of the Medical Officer. He is seen to be a pedant of the worst type, a bigoted follower of the rule of thumb, a person without discernment or power of independent thought. Moreover he is not content with keeping us waiting. Not content with testing the water, he must needs be chlorinating it. His minions throw evil powders into it, so that the good sweet water becomes vile and an offence to the palate. We can even taste it in the tea, and we spend a hearty half-hour in reviling science, and above all, its nearest exponent. Yes, I am

---

## IN SALONICA WITH OUR ARMY

---

quite sure that I do not want to be a Medical Officer.

But even this chlorinating business is not the whole of the trouble. It does quite frequently happen that there are two springs to serve the camp, one near at hand and disreputable, and the other far away and tolerable. The doctor decides that the water from the far spring must be used, and immediately earns some more unpopularity. He is unpopular with the men who are told off to guard the forbidden spring and have to stay there all day long scaring thirsty people away. He is unpopular with the men in charge of the water mules who have to keep tramping to and fro for a mile, or it may be a mile and a half, to bring water for the varied needs of the battalion. And more than ever is he unpopular with those who are told that they cannot have any water yet because the mules have not come up. Any man who goes looking for popularity is a fool, but a man who is compelled to attract such an amount of unpopularity is to be

---

## CONCERNING WATER

---

pitied, whatever his faults may be. Yet these things have to be done, that His Majesty's forces may deal the more effectually with His Majesty's enemies.

When drinking water has been arranged for there still remains the business of washing, and this is frequently quite as difficult a question. Really there are times when one cannot understand how our men in Macedonia contrive to keep so clean. It is bad enough for an officer. Requiring a tub he sends his servant off to find some water. Having no more than two hands, the man cannot well contrive to bring more than two canvas buckets back with him, and quite possibly he has had to carry even that amount nearly a mile. With a couple of buckets of course one can do something. Even half a bucket will go quite a long way if you are careful with it, but there is no solid satisfaction in such a tub. At the best it is only a makeshift.

But if the officer with his buckets finds the problem difficult, how does the soldier

---

## IN SALONICA WITH OUR ARMY

---

manage? He has no bucket. Most probably the only available water is in a mean little stream which he must share with a few hundreds of his comrades. With that meagre supply he must do all his washing and shaving, and also wash his clothes. Whether there is another army in the world which would keep clean under the circumstances I do not know; probably most of them would not even try, but our men try, and succeed.

Outside of Salonica I only found one place in Macedonia where one could get a real bath. That was at the standing camp of Janes. Having a plentiful supply of water, the officers of the camp decided to fix up a place for washing, and they did it well. There are big tubs in which one can wallow with extreme joy, and there are showerbaths as well. Places are provided for men as well as for officers, and there is a separate department for washing clothes. When in our wanderings we halted by that camp for a time and were informed that we might use

---

## CONCERNING WATER

---

the baths the battalion nearly went mad with joy, and there was a waiting list for every bathing parade, while clothes were being washed all day long.

Yet if proper baths were scarce, it was occasionally possible for people who were really interested in the matter to clean themselves thoroughly. It all depended on their power of using their opportunities to the best advantage.

We came one day to a camp which was pitched in the middle of a hot, blistering plain. There we remained for five days. In the morning and the evening we did short marches or a little drill, but through all the scalding hours of the middle of the day we could do nothing but lie in our bivouacs and gasp for breath. It happened that on our second day in the place I found a quiet little stream, and I mentioned the fact to one of the others who had been in the country a few months longer. Without asking any more questions he sent his servant for a couple of shovels, and when they arrived,

---

## IN SALONICA WITH OUR ARMY

---

commanded me to lead him to the place.

The stream ran in a bed which it had carved for itself at the foot of some tall cliffs. They were so high and followed such a course that the blazing sun could not reach that little rivulet of water, but it flowed very happily in the cool shadow. It was quite a tiny affair, nowhere more than three inches deep, and at the widest it was not more than three feet across. But we had those shovels, and our own intense desire for a bath.

It is as well to remember that, however small a stream may be, it is bringing down fresh water all the time and will eventually fill up any cavity it reaches and sweep away all the mud you may stir up. We set to work with those shovels and began to dig great holes right in the bed of our little stream.

It made a vast commotion. We were throwing gravel and mud and stones to left and right. All the little minnows swam away in terror, and a crab which we disinterred made frantic attempts to hide itself under a rock, but we went on scooping and

---

## CONCERNING WATER

---

scraping and excavating, always with a careful eye on our own dimensions. If you buy a ready-made house you have to be content with the baths which the builder has installed, unless you are very rich and can afford to have them replaced by your own size in baths. But if you make your own bath you can make it to fit yourself. You can make it long and broad and deep enough, and to prevent mistakes you can try it on while it is being made.

So we dug our baths, and the stream brought us down an incessant supply of fresh water. A very few minutes after we had finished our scraping and shovelling we had each a great, clear pool, and we proceeded to enjoy ourselves. It is a great experience to sit in water up to your neck when for months you have had to make shift with a sponge. And the experience is more wonderful still when you know that outside your little patch of shade there is the tormenting heat of the sun at noon. We sat there for hours, revelling in the caress of the cool

---

## IN SALONICA WITH OUR ARMY

---

water, jumping out now and then to bask in the sun, and returning once more to the touch of the running stream. When at last we returned to the camp it was with the consciousness that we were thoroughly and effectually clean, and we felt very superior to all the unfortunate people who had not known what it was to steep themselves in real water for months.

Our superiority was short-lived, of course. Others found that secret little stream, and we had no copyright in the bath-digging idea. Two days later the stream was a series of holes and in every hole a soldier splashed and soaked and smiled. The only advantage that we gained was that, being the first on the scene, we were allowed to keep our places at the head of the stream and so were not obliged to wallow in the mud and soap-suds sent down by other people.

But if you want a hot bath in Macedonia there is only one thing to do. You must contrive to get so ill or so badly hurt that you are sent into hospital.

## CHAPTER VII

### OUR HOUSES AND TIN

**W**HEN one is young the snail often appears to be an enviable beast. It seems such a jolly idea to wear your house on your back, and to be able to move without difficulty into the next street every time the neighbours start disliking you. It is a pity that we have to grow up and put away childish things. If they only retained that youthful envy of the snail the soldiers of the Salonica armies would be quite happy about the fact that they actually do carry their houses on their backs, but they are adult and disillusioned men, and I did not meet one who was really glad to have realized that dream.

To be sure our houses had little in common with the snug, weather-proof residence of the

---

## IN SALONICA WITH OUR ARMY

---

snail. They consisted simply of bivouac sheets, together with such sticks or other supports as we could manage to acquire in the course of our wanderings. A bivouac sheet is a piece of material furnished with eyelet holes, buttonholes and buttons, and it is theoretically rainproof. Many things which are supposed to be rainproof lose their reputations when they are exposed to Macedonian storms, and anyhow our sheets had seen plenty of active service and they were getting tired of it. They were not even showerproof.

Each man carries a sheet, and when a new camp is reached he conspires with a comrade to make a house. Architecture is a simple matter. Two uprights are driven into the ground and a cross-bar lashed to the top of them. Over this the two sheets are flung buttoned together so as to make one long sheet. The free ends are pegged to the ground, and the result is a little triangular canvas tunnel in which two men may lie side by side or one, if he is very careful, may sit upright. If the two try to sit upright at

---

## OUR HOUSES AND TIN

---

the same time the house usually falls down. The edifice is, of course, open at each end unless they are very short men who can afford to leave enough to lap over and join at one end, when the place becomes a cave instead of a tunnel. Old soldiers learn in time the trick of acquiring an extra sheet, and with three sheets between two men a very tolerable little place can be made, but there is the disadvantage that some one has to carry the extra sheet.

The officer is, of course, a little better off. He is not compelled to share his tunnel with anybody else, and the number of sheets which he owns is only limited by the ingenuity of his servant or the weight of his kit. Also he does not have to construct the house himself—though many officers find it necessary to lend a hand, for the really good servant is a rare bird. But in all other respects he is on terms of perfect equality with the men, and if a storm arrives he is as thoroughly soaked as any of them. He, too, has to solve the problem of turning over in bed

---

## IN SALONICA WITH OUR ARMY

---

without wrecking his home. He, too, must abandon dignity when he wants to go indoors and enter crawling warily on hands and knees. And when the occasional whirlwind approaches, he, too, must cling to his dwelling, and hold on with might and main lest the whole affair go dancing over the crest of the local mountain to hide in some remote valley.

For a real house rock is, of course, an admirable foundation, but it is quite another matter when you are trying to raise an erection of canvas and sticks, and the fact that Macedonia is largely composed of rocks is not the least of the troubles of the bivouac builder. The uprights and the pegs cannot be driven into the ground. There may be a thin layer of soil, but it is not enough to hold them if it begins to blow, and you are painfully conscious that the whole affair is ready to collapse at the first opportunity. You go round it, tenderly and lovingly, seeking to strengthen it where you may, but when all is done the thing is as frail as a card castle.

---

## OUR HOUSES AND TIN

---

But the ingenuity of the British soldier is un-  
failing. Once in the days of my igno-  
rance I had been putting up my bivouac by  
myself and striving valiantly to drive home-  
made pegs into marble of superior quality.  
My servant had been delayed, but when I  
was perspiring irritably and trying to think  
of appropriate things to say, he appeared  
and took charge of the situation. Instead  
of trying to drive pegs into the ground, he  
organized a system of anchors. The uprights  
were stayed by cords fastened round great  
lumps of rock. More lumps of rock took the  
place of pegs, until the whole was made  
generously secure, and he went about the  
task of arranging the furniture with an honest  
endeavour to hide his opinion that I was  
a foolish person who should never have been  
allowed so far away from home. I left him  
to it, and went away to watch where the  
shells were bursting along the ridge of a  
little hill just by Doiran. When I returned  
the place was ready for me to take posses-  
sion.

---

## IN SALONICA WITH OUR ARMY

---

Camp furniture in Macedonia is rudimentary. In England the newly-gazetted subaltern buys many beautiful things made of wood and Willésden canvas. If he is wise he leaves them in England ; if he carries them as far as Salonica he will have to leave them there. Camp beds, baths, tables and chairs are pleasant things to own, but there is not enough transport to carry them round the country. He will be firmly discouraged if he tries to take with him anything but a canvas bucket.

Even so, a great deal can be done to make a bivouac look like a home ; it all depends on the sort of servant you find. Mine was a very wonderful person. He would set out the shaving tackle, the two or three books, and the other scanty odds and ends, all arranged on boxes which he always seemed able to find. Somehow (one does not inquire into these matters) he acquired a big piece of canvas and stitched it up into a long bag which he stuffed with dry grass and made into a most admirable mattress. And also,

---

## OUR HOUSES AND TIN

---

wherever we went, he had a knack of discovering sheets of corrugated iron wherewith to enlarge and strengthen the sides of the house. That is the final proof of the expert in Macedonia—the power to find corrugated iron when no one else can find any. It is the most desirable substance. If you can find enough of it, you can make yourself a dwelling into which the rain cannot enter, which the wind will not greatly disturb. You can make a little palace for the mess and arrange shelter for the cook-house so that the weather will not disturb the due order of the meals. Given enough corrugated iron — known throughout the country and in all the rest of this book as “tin,” you can make yourself really comfortable.

In the beginning I suppose the tin came to Salonica addressed either to the Engineers or to the Army Service Corps (to whom the good things of life do habitually and automatically address themselves). Probably it was sent out by trustful people in official positions who imagined that it would all be

---

## IN SALONICA WITH OUR ARMY

---

used for holding up the sides of trenches, aiding in the construction of bomb-proof shelters, or building stores for perishable goods and, perhaps, little huts for favoured brigadiers. But when the army started housekeeping on those hills and found that there were to be no tents because they were too heavy to be carried about, it began to realize the possibilities of tin. Ever since then the Engineers and other people who have some sort of official right to the stuff have been finding themselves compelled to send for more, and yet more of it, for their stocks do so consistently and mysteriously vanish.

You cannot hide a store of tin from battalions who have been long enough in the land to learn the value of it. Some one will ferret out the secret, and those precious sheets will vanish. Once we were camping among the hills, far enough from everywhere and every one for three weeks. Soon after our arrival we discovered three miles away a little hut which seemed to have been put up at some

---

## OUR HOUSES AND TIN

---

time or other as a signal station. All we were concerned about was that no one had been left to take care of it, and a couple of limbers very quickly transferred it to our camp where it was re-erected and made a very superior mess for our company. At the end of three weeks we had to go off on trek, on another spirited attempt to find the war. We knew that we should only be gone a little while, so we took the hut to pieces and hid the sheets, as we thought, quite cleverly. We were gone just a week, and when we returned every strip of tin had vanished, but down in a valley a mile away the officers of a detachment of pioneers offered us hospitality in a hut whose roof and walls were entirely familiar. It is a little difficult to accuse your hosts of stealing your house, especially when you stole it yourself in the first place. The only remedy open to us was to find and annex another stack of the precious sheets.

The result of this blending of tin and bivouac sheets is to give the average camp a

---

## IN SALONICA WITH OUR ARMY

---

terribly disreputable appearance. I reached the land from England by way of Egypt. In Egypt we had had all the tents we needed, and our camps looked very nice out there on the edge of the desert. It had not occurred to us that you could have a camp without tents. They were as much a matter of course as the adjutant or the battalion postman. But when I reached the camp among the Macedonian mountains there was a revelation waiting for me. Not one tent was to be seen anywhere. There were only the rows of the tiny bivouacs, and the orderly room and the mess and all the other important places were just huts built of rusty corrugated iron, looking for all the world as if they had strayed out of a patch of allotment gardens at home. The whole affair looked so shabby that one wanted to go off and apologise to somebody for it.

But presently bugles were calling down the lines and the men came out, and presently the battalion was on parade. They stood there in shirt-sleeves and khaki shorts, the

---

## OUR HOUSES AND TIN

---

summer drill order of the Salonica armies. Their arms and their bare knees were burned as brown as their faces, and their equipment was frayed and worn but easy-fitting, and worn with an accustomed air. When they marched off they went with the careless, confident swing of men who have learnt to disregard the miles, who have learnt and are masters of their trade. And one realized that the peculiar appearance of the camp had nothing whatever to do with the business, that this curious cross-bred product of a gipsy caravan and a market garden was the home of real soldiers.

Later one learnt how swiftly those curious camps of ours could be struck and pitched again. Pitching a camp in England was always such a long, laborious business. The lines had to be marked out with infinite care, and the tents could only be raised with the aid of all sorts of sergeant-majors and similarly authoritative persons. But with these queer little canvas houses and these perfectly trained men, there was no confusion, no

---

## IN SALONICA WITH OUR ARMY

---

delay. Ordered to move off, each man packed his share of his dwelling in his valise with the rest of his goods. Ordered to halt and encamp, the bivouacs rose as by magic in neat, comely ranks and their inhabitants proceeded to make themselves at home.

Of course it often happened that we reached the camping ground too late, or were to stay there too short a while to put up bivouacs, and then every one slept in the open with only the sky for a roof. It is a very excellent way of sleeping, but there are just two drawbacks. In the first place, the sun does occasionally get up before the soldier needs to rise, and he awakens all the myriad insects of the land which in their turn proceed to arouse every sleeper within their radius. And in the second place it does sometimes begin to rain in the night, and a man who can sleep with drops of rain pattering on his face is a bit of a curiosity among such a roof-sheltered race as ours.

In winter, of course, things are very different, but then in winter the troops are

---

## OUR HOUSES AND TIN

---

not moved about the country with the apparently aimless gaiety which is the rule in summer. They stay long enough in one place to make more enduring habitations, and there is a great digging and building as dug-outs and shelters are prepared. On the line between Salamanli and Dudular there are some wonderful dwellings to be seen, carved into the side of a cliff, and fitted with doors and windows, and photographs of these and similar luxuries have appeared in the papers from time to time. But I have never yet seen a photograph to illustrate the accident which befell a friend of mine down by Jerakaru. His dug-out had been constructed without sufficient study of the habits of the local floods. It was a nice dug-out, with a good, high sleeping shelf, and he was very proud of it. But there came a night of rain, and in the morning when he awoke he found that he had the option of staying in bed till the flood subsided or taking a plunge into about four feet of icy water in which all his possessions were swimming disconsolately

---

## IN SALONICA WITH OUR ARMY

---

round his home. That is the kind of thing which is liable to happen to any one stationed on low-lying ground in the rainy months, and to be flooded out of your camp is just a part of the routine. If it does nothing else it adds to the appreciation of the rum ration.

## CHAPTER VIII

### RATIONS AND THE DUMP

GOING to the war in Macedonia is not an exciting business, because there is so much Macedonia and so little war. There are not many of the quick alarms which are supposed to haunt the soldier day and night. It is true that the guns keep pounding away, but there is so much room for the shells to fall and burst without hurting any one. Even on patrol actions, those nocturnal amusements of the people on the Struma, the man who gets hit is usually more astonished than anything else. A party of our men had been out doing some searching of the ground on the other side of the river one day last summer. They had had a few shots fired at them, but no one had been touched and they returned at last to their defences.

---

## IN SALONICA WITH OUR ARMY

---

and the officer in charge of them found his company commander having tea at the door of his dug-out. He sat down, with his back towards the river, to have a cup and to make his report. Suddenly he rose to his feet. "I'm hit," he said quietly, and walked off to the dressing station, while the others stared. But it was quite true. Some enterprising Bulgar far away on the other side of the river had fired a shot at random, high in the air; it had caught him in the back, and gone clean through his body, and when I went to see him in hospital he was still puzzling over it. "Just think of it!" he said. "I was through some of the hottest of the shows in France in the first year and never got a scratch, and now I get plugged while I'm sitting down having tea! What can you call such rotten luck as that?"

Whatever else you may call it, it does not seem much like war as we have known it on the Western front. It is just the kind of irritating thing which does happen in Macedonia, and it is hard to say anything

---

## RATIONS AND THE DUMP

---

else about it. He had not even the consolation of being hit in the ordinary course of duty, and he was intensely annoyed. And that mood of intense annoyance is one which becomes very familiar after a few months in the country. It seems so desperately futile. There is the war to be attended to. One joined the army and learnt numerous strange lessons in the hope of being allowed to help to attend to it. One came to this exceedingly uncouth land in great joy, feeling that at last the chance had come and that all the many months of training were to have their fulfilment. Also one is in the presence of the enemy. It is possible to sit, as I have sat many a day, on the hills above the Struma and look at Bulgars through field-glasses. Those are the people whom it is one's business to vex, to harass, and destroy. Back in the camp are the keen-eyed, eager men with their carefully tended rifles and their sure, steady hands and their constant burden of ammunition, and they, too, are annoyed, for nothing is given them to do but

---

## IN SALONICA WITH OUR ARMY

---

to make roads, to dig trenches, and to put up barbed wire in places which it does not seem humanly possible that the enemy can ever reach. We all appear to be as remote from the task we wanted to undertake as when we were still in England, and perhaps our annoyance is not to be wondered at. Swords may not have been beaten into ploughshares in Macedonia last summer, but bayonets were pretty generally put aside for pick-axes, to the intense disgust of their owners. Of course we knew nothing of the plans of the higher commanders. We could only see the things within the circle of our own horizon; we could only note what happened to us from time to time and draw our own conclusions from those happenings. Every now and then some order would come which seemed to indicate that at last we were going to fight, and we would forget to be annoyed for a little while. But in a very few minutes some pessimist would come along with the remark which we learned to hate and to dread more than any other arrangement of

---

## RATIONS AND THE DUMP

---

words—"The A.S.C. say that if we do advance, they can't feed us." That sentence was the passing-bell of our hopes over and over again, and when we read in papers sent out from home that we were sure to do something before long, we used to say it to ourselves once more, and subside into blasphemous silence.

In every matter save that of food and ammunition we were, I suppose, as mobile a force as any leader could desire. The Salonica armies understand moving about with the least possible delay. Trained to the country, accustomed to march as well by night as by day, carrying our houses on our backs, we needed only to be fed and to be supplied with ammunition. But that was the difficulty, and the conclusion of the whole matter.

Wherever he goes the soldier takes with him his emergency ration, the little tin of meat, the other little tin which contains tea and sugar, and the handful of biscuits. He carries these things about with him, but he

---

## IN SALONICA WITH OUR ARMY

---

does not eat them. Somewhere or other in my kit is a much-travelled tin of bully beef that has been to see all sorts of queer places in Egypt, has wandered over most of the map of Macedonia, and visited quite a number of hospitals on the way home, and that is the proper way to treat an emergency ration. All the time you have it you know that you are assured against starvation, so you must keep it and never eat it, under pain of dreadful penalties, for it is only designed to last for one day, and when that is over you are finished altogether.

If some one could invent a new kind of soldier who could carry with him a week's supply of food in addition to all his other tackle, we should have a new kind of war immediately, but as it is, the man must be within reasonable distance of his supplies. And that means that wherever he goes there must be a dump somewhere fairly close behind him. If you are told to proceed to any new place, the first question is always "Where is the dump?" Water can always

---

## RATIONS AND THE DUMP

---

be found somewhere or other, and you have the doctor with his box of tubes and powders to make it fit for you to drink. Fire and shelter you can provide for yourself out of what you may find and the burdens which you carry, but unless you can find a dump you will be lost. For as I have pointed out in an earlier chapter, it is not possible for an army to live on the land in Macedonia.

A dump, as its name more or less indicates, is a place where things are dumped. It consists, to the outward eye, of a collection of tents and marquees which live in a constant whirling confusion of motor lorries and limbers. In the marquees and around them are mountainous piles of packing cases and other matters which are constantly being built up and do as constantly melt away and vanish, while between them agitated men run to and fro with little note-books, pencils and bits of carbon paper. You might not think as you stood watching their frenzied evolutions that they were engaged in winning the war, but that is very literally and exactly their

---

## IN SALONICA WITH OUR ARMY

---

business in life, and they are doing their best to carry it out.

Really it is time that people stopped throwing bricks at the Army Service Corps, and I say so with the more sincerity because I have thrown a few myself in my time. It is true that they always have the best kind of jam in their messes, and that they never run short of Ideal milk. It is true that they usually manage to keep themselves supplied with fresh meat, that their teeth are unaccustomed to wrestle with biscuits while there is a loaf of bread in the land, and that ration rum reaches them in generous measure—but is there one among us all who would not take similar care of himself if he had half a chance? When I was in the ranks we used to sing insulting ballads to A.S.C. men whenever they appeared, such as—

“ With the Middlesex in the firing line  
And the Queen’s in support behind them,  
But when we look for the A.S.C.  
I’m hanged if we can find them.”

In these and other ways we did our best to

---

## RATIONS AND THE DUMP

---

explain our deep conviction that the A.S.C. had nothing whatever to do with the war, that they were pampered aristocrats who dwelt in luxury and idleness among the jam tins far behind the line, and did nothing all day long but conspire together to rob the poor soldier of his rations. But no one who has been in Macedonia for any length of time is likely to perpetuate those insults, even in jest. We are more likely to give thanks that it was not our fate to get into their ranks, and to pay them a very honest tribute of admiration and gratitude.

This is a digression, but it was necessary. And now it might be as well to return to the dump, and to explain just what those agitated men have to do. Obviously it would be a complicated business to send out motors from Salonica every day with the stores for the separate units which have to be supplied. It is much easier to send out the stuff in bulk and to distribute it as close to the line as possible, and for that purpose the dump is established.

---

## IN SALONICA WITH OUR ARMY

---

A place is chosen which has to satisfy three conditions. The first is that it must be connected with Salonica by the best available road, so that there may be the least possible delay in keeping it supplied with stores. The second condition is that it must be as close as possible to the advanced line of troops, and the third that it must be in a position which can be reached easily and safely by the units which it is to supply. When such a spot has been found the preparations are made and the tents and marquees are put up. Lorries come trundling over the skyline laden with all those things which go to make up the meals of the soldier on active service, together with the food for the innumerable mules and for the occasional horse. As it comes up each lorry hurls out its load of packing cases or sacks or bales, and they are received by busy, grimy men and piled in the positions ordained for them while the lorries trundle back for more. There rises a mountain of the meat which journeys to the front in tins. Close by will be arranged

---

## RATIONS AND THE DUMP

---

a pile of huge sections of dead animals decorously arrayed in sackcloth, while sacks of onions and potatoes close at hand suggest the army's affection for stew. A little further on will be the cases of condensed milk, tea, sugar and jam, and all the time bread will be arriving from those excellent bakeries which are hidden away in the little valleys round Salonica. Scattered among the chief mountains will be the lesser mounds of those various small delicacies which are given to us from time to time for the greater comfort of our bodies and the increased valour of our souls.

Having got all these nice things so nicely arranged, and having written a great deal about them in his little books, you might think that the A.S.C. man deserved to be allowed to sit down and admire the result for a little while, but he is not permitted such luxury. A dump is not a museum. Before the last lorry has got rid of its load, the empty limbers are rattling down from the opposite direction, bringing with them men armed with documents and desires. They

---

## IN SALONICA WITH OUR ARMY

---

come from the big camps, and from remote, secret places where little detached parties are busy. They come on behalf of the men in the front line trenches, and of those others who are stealthily constructing works on distant, hidden hillsides. The documents support their claim to rations for so many men and animals. They are cheques which must be cashed in meat and bread and fodder.

There are printed works on the subject of rations. In those works you may learn exactly what the soldier has a right to receive, what must be given to his mule, and what are the demands of a charger of over sixteen hands. If you gave me all those works and a pencil and a great many sheets of paper and left me alone for half an hour, I might be able to tell you at the end of the time what should be given to a man who demanded, say, sustenance for a hundred and fifty men and seventy mules. But the A.S.C. man is a professional. He has been at the job a long time and he knows the answer to all the sums, nor does he need to work

---

## RATIONS AND THE DUMP

---

them out. He glances at the document which each man brings and gives his orders, and the cases fly into the empty limbers till they are subdued and sluggish under the weight, and crawl thoughtfully out on the way home.

It is a dizzy, bewildering business watching a dump when everything is going at full pressure. There will be a string of motor lorries for some big, distant camp, threading through the mounds of stuff and taking toll from each. Mixed with them will be the limbers, the puzzled, rebellious mules, and the men whose uneasy business it is to control the mules. Every one is working very feverishly and the whole looks like unreasonable confusion. But as a matter of fact there is no confusion ; it is all going quite smoothly, and everybody knows what he is doing.

For wise battalions—and most battalions acquire wisdom after a little time in Macedonia—do not send novices to the dump. The novices certainly get the things they were sent for, because they hand in their

---

## IN SALONICA WITH OUR ARMY

---

documents and the A.S.C. men do the rest, but men accustomed to the job sometimes get better stuff. If, for instance, there is only a limited supply of fresh meat, and the rest of the day's issue must be bully beef, the old hand can frequently throw in a word which will obtain the fresh meat for his unit. Undisturbed by the tumult, knowing exactly what he wants and what he is entitled to have, he makes his way round the marquees and does obtain, within the limits, the pick of the available stuff.

Satisfied at last the limbers go rolling and bumping back through the valleys and over the hills to their homes where the load they carry must be shared out, so much to each company, so much to the transport, so much to the officers. It is quite certain, of course, that every one will grumble. The army always grumbles, but it is so much a habit that no feelings are hurt and the injured expressions do not reveal any genuine or deep-rooted discontent. And really there is not often much to grumble about.

---

## RATIONS AND THE DUMP

---

It is all very simple, of course, and there are the times when the day's rations will consist of very little but a tin of bully, biscuits, tea and sugar, but even then there may be jam, and there is a deal of excitement to be gained out of the business of eating one of those biscuits with jam unless your teeth are in absolutely first-class order. One learns in a very little while to regard the absence of butter with indifference, and I fancy that quite a number of our men will come back protesting against the milk which comes direct from the cow and demanding instead those brands which come from the grocer's in tins. The one thing which we did miss and urgently desire was sauce—all kinds of sauce. If you can treat bully beef to a dash of Worcester or something of that kind it goes down so much better, and this is a hint which any one with friends or relations in the Salonica forces may take. If you are making up parcels, include something which will give a zest to plain fare, sauces, relishes, pickles—all such articles will be more than welcome.

## CHAPTER IX

### HEAT AND SOME ANIMALS

**W**HEN the war is all over and those of us who are left come back once more and meet together and talk over our experiences there is likely to be some comparing of hardships and discomforts endured. For my own part I think that it is possible that those who were through the first winter in France and the first year of the campaign in Mesopotamia really had the worst of it. But we have known a little about discomfort in Macedonia too. There is a place called Güvezne. . . .

Güvezne is a village, but for army purposes it gives its name to a considerable tract of country round—country which is not far from being the most detestable in the whole land. It is a wide plain lying between the

---

## HEAT AND SOME ANIMALS

---

hills that rise behind Salonica and those others which the Seres road has to cross on its way to the Struma. The road runs across this plain for a distance of several kilometres, and as one marches up the views to left and right—and especially to the right—are discouraging. All that one can see in summer is the expanse of parched, unhappy ground sweeping away to the distant hills. There are no trees, nor is there any kind of shelter from the blazing heat of the sun. The ground bears a little wretched grass, and a great many thistles, and nothing else at all, unless one counts the myriad lizards as a kind of secondary crop. It is all as bleached and dry and desolate as the dust-deep road itself. There is water to be found at some little distance from the road, but it runs out of sight in a deep cleft in the earth ; it cannot give even one gracious touch of green to break that searing monotony of light and quivering heat.

I have never seen a stretch of land that insisted more furiously upon being a desert.

---

## IN SALONICA WITH OUR ARMY

---

How it is I cannot say, but in Egypt one does not get the same effect of desperate desolation. The enormous spaces of the sand are terrible, not horrible. They are barren with a calm and as it were eternal content, and with majesty. But here is no majesty, only a mean and squalid futility. The sand has no choice but to be barren, but this land might be laughing with flowers and singing with the little whispering song of the wind among the corn. It is that perhaps which makes it horrible and a place of torment for the body and the soul.

As this plain is horrible, so is its heat horrible. Again it is different from other heat. There is the scorching fury of the blast that drives and burns across the sand, and there is the demoralizing, languorous heat that soaks into every fibre of the being in such a town as Alexandria, but the heat of Güvezne is not like either of these. There is something sullen and savage about it, something poisonous. It happened to me to camp on that plain for two periods of a week

---

## HEAT AND SOME ANIMALS

---

and I would sooner have a month of the worst that the African desert can do than spend a third week there. It is better to be burnt up than stifled by foul, stale air from which all life-giving qualities have been drained away.

We came to the place by night, had our meal, and slept for a few hours under the stars. We awoke very early with a distinct impression that all the flies of Macedonia had gathered round our camp to welcome us. By eight in the morning it was uncomfortably hot, accustomed though we were to the climate. Bivouacs were put up without delay, for it was obvious that shade would be badly needed soon, and no shade or shelter from the sun could we have unless we made it ourselves. Two hours later we were lying in those bivouacs wondering what we had done to deserve it, and reflecting with uneasy minds that it was only ten o'clock.

A bivouac can be quite a good shelter if it is fortified a little. If you can cut a lot of scrub and pile above it, and if you turn its mouth to the prevailing breeze—if any—

---

## IN SALONICA WITH OUR ARMY

---

your little canvas cave is at least tolerable during those hours when the heat compels people to remain still and under cover. But this wilderness had not even scrub to give us, and there was not even the faintest suggestion of a breeze. There was only the dead, unmoving air, and the sun which blazed through the thin canvas sheets with so little mitigation of his fury. We proceeded to spread blankets over the tops of our houses, and to wonder what more we could take off our bodies. But when your clothing consists of nothing but shirt, shorts, socks, puttees and boots, it is very difficult to know what you can remove without presenting large areas of your unhappy body to the exploring feet of the flies.

For as our misery-increased so did the swarms of insects grow happier. They liked the heat. They revelled in the foul, smothering air; the wilderness was their chosen and beloved home, and they appreciated it thoroughly. Also they seemed to have an idea that we had come there on purpose to

---

## HEAT AND SOME ANIMALS

---

play with them and they meant to make the most of it. It is bad enough to be baked and smothered and poisoned, but when in addition you are invited to become the playmate of a few thousand flies, ants, spiders and grasshoppers, life seems rather too much of a burden.

There may be other countries as densely populated with insects as Macedonia, but it is a little hard to believe that there are. Certainly the flies are a far worse plague than they ever were in Egypt. Wherever we went they were swarming. If we camped on a spot where no troops had been before and thought that we had escaped them, they were round us in millions within twenty-four hours. This ground at Güvezne had been used for camping before, and they were all ready for us. If we never see any more flies for all the rest of our lives we, who spent those two weeks on the detestable plain, shall have seen our share.

And the flies form only one of the tribes which infest the land. Everywhere the

---

## IN SALONICA WITH OUR ARMY

---

ground is alive with grasshoppers of all sorts and sizes which keep up a continual chirping all the day, to be succeeded by the tree-frogs which keep the night alive with sound. Also there are innumerable ants, and in many areas it does not seem possible to pitch a bivouac without having one or two of their holes within the boundaries of one's dwelling. Ants, however, do not give much trouble, and they are tidy little beasts. As you go on with the weary massacre of flies which is the chief business of the day, they wait on the floor to collect and carry off the dead bodies. They seem to find them useful.

Then there are numerous spiders, including one most objectionable variety, a large and heavy creature with a weakness for walking across one's face in the middle of the night. It is not pleasant to wake up in the middle of that promenade ; it is still less pleasant to wake and find that a massive centipede three inches long is doing the same thing. Those centipedes are perhaps the most loathsome of all. They are so big, so fond of going to

---

## HEAT AND SOME ANIMALS

---

sleep in one's bed, and they look so venomous. Probably they are perfectly harmless, but one instinctively believes the worst of such creatures without waiting for investigations. Also one kills them at sight and that in itself is a horrible business. There is so much squelching as the boot does its work.

When you get away from the insects the small live things of the land are rather entertaining. Lizards are everywhere, and they are lively, friendly little beasts. It is a pity that they feel so much like snakes in the dark, and newcomers are apt to be a little disturbed at first, but they soon get used to the small, bright-eyed animal that insists on a share of bivouac or hut. But of course the chief entertainer of the Salonica armies is the tortoise, the tortoise who stalks or occasionally gallops round the country, waving his head from side to side, inquiring into everything, carrying on all his most private affairs in the most shameless publicity, and upon occasion consenting to run races with others of his kind for the benefit of his

---

## IN SALONICA WITH OUR ARMY

---

temporary owners and sundry amateur and diffident bookmakers.

If you have only known the tortoise sleeping in a corner of a conservatory or sluggishly wandering round some suburban garden; you cannot imagine how gay and alert a beast he can be. Also he is resourceful and given to helping his companions in distress. I went one day to my bivouac, tired with a long spell of road-making, and sprawled on the bed for a rest. Very much to my disgust I found a large, hard lump beneath me, and cursing my servant for spreading the bed on top of such a rock, I set to work to fish it out. It was not a stone at all, but a large and venerable tortoise who had burrowed under my blankets for a quiet nap. I did not appreciate his enterprise and I was annoyed, so I put him outside the door on his back, and a big tortoise on his back is one of the most helpless things in the world. I lay there, watching his frantic efforts to turn over, when suddenly another tortoise appeared. There was a little intelligent pushing

---

## HEAT AND SOME ANIMALS

---

and butting, and my captive was right side up once more, and hurrying off with his rescuer to a place of safety.

You may be wondering why I should have begun this chapter with a large number of complaints about heat and a place called Güvezne, and then rambled off into a dissertation on tortoises. It is really quite simple, and the two things are not so far apart as they may seem to be. You see in those purgatorial days we had to get through the time somehow, and all these flying and crawling and creeping things helped us to do it. In a country so empty of occupation as Macedonia at noon, it is something to have even a tortoise to watch ; there is a little distraction in waiting to see what will be the next move of the lizard which is peering so inquiringly into the entrance of the bivouac. So when one begins to think of those days of torrid unhappiness, one thinks also of all those little animals which were our companions at the time, either as unendurable plagues, or as centres of a little interest on which the

---

## IN SALONICA WITH OUR ARMY

---

mind might fix for a while and forget the slow passing of the hours.

One thinks of them and of one thing beside—of thirst. There is the thirst which comes from marching or from long labour, but it is a sheer pleasure compared with that thirst that comes from lying still and being smothered by the lifeless burning air. You can come in from your march, drink a pint of anything that may be available, and get a space of sheer happiness and content. But when you are just waiting for the smouldering hours to pass there does not seem to be anything at all that will relieve the parched throat, and the mouth is always dry.

Besides, there is usually nothing to drink but water that is chlorinated and warm. To a genuine, toil-born thirst, that would seem good enough, but it is only an insult to the feverish craving that comes from lying still and being hot. It seems to clog on the mouth and throat; so that the misery after drinking it is greater than the misery which went before. One can only lie there and dream of

---

## HEAT AND SOME ANIMALS

---

real drinks, cold drinks, drinks with none of that filthy taste in them.

The long day drags to its close, and with the evening comes the return of life. There is that much at least of gain in the business. When the sun is almost on the western hills one does taste something of the absolute joy of living. By the time tea is over—and scalding hot tea is a fine thing for that wretched thirst—the world appears to be a different place. That is the time when people who own guns go valiantly forth to look for hares, when one remembers letters that should be written, and has heart to discuss the chances of really finding the war at some time or other. It is possible then to take an interest in the prospect for dinner, and to go on excursions in search of eggs and tomatoes. The sunset is perceived to be glorious, and even the thistle-grown plain is not quite such a wilderness as formerly it had appeared to be.

There is the comfortable assurance that life will be quite tolerable for a matter of fourteen

---

## IN SALONICA WITH OUR ARMY

---

hours, and that the flies will go to sleep. Of course they prefer to go to sleep inside the bivouac if they can, and if you let them do that they are quite sure to awaken you at sunrise. The best thing to do is to wait till they have settled down cosily for the night, so that most of the roof is black with them, and then get to work with a towel and beat and drive them out. They always seem too sleepy to find their way back and then when you go to bed you can drape mosquito netting over the entrance, and there will be no trouble about sleeping in the morning till you are officially awakened to get through another day of sun and sorrow.

## CHAPTER X

### SUNDAYS AT THE WAR

**W**E left Güvezne and marched away up the Seres road to Lahana, which stands just below the highest point which the road reaches on its journey from Salonica to the Struma. What we did there is a question of no importance, but we took three weeks over doing it, and on the Sundays we used to go to the war, because Sunday was a holiday and we could do what we liked. It was possible to start quite early in the morning because we had left the padre with the rest of the battalion lower down the road, so there were no church parades to hinder us. The cook was inclined to be grieved because he had to get up at unconscionable hours to give us our breakfast, but that could not be helped. We had to make the most of the holiday.

---

## IN SALONICA WITH OUR ARMY

---

It is quite easy to get to the war from Lahana. All that you have to do is to stop the first motor that comes along—so long as it is not a Red Cross car—and go as far as it will take you. If it is one of those modest, retiring motors that does not like to push itself forward too far, you can always jump off when it stops and board one which is going further. Those lorries have to go fairly close to the trouble. They have shells to take to the batteries, and food for the men in the front line. Of course they don't go up to the front line, but there are times when they find themselves under fire. At the period of which I am writing, the Bulgar was in the habit of dropping an occasional shell on the road. His attentions did not make the road much worse than it was before, but they served to put a spice of adventure into our journeying.

The proper thing to do first of all was to go and call on a battery. There was always sure to be one about somewhere, if only you could find it. Locating batteries is not the

---

## SUNDAYS AT THE WAR

---

easiest job in the world, even when they are on your own side and you are free to move where you will in search of them, and it is more difficult than usual in Macedonia because the country is so very complex. But one learns in time to track the guns to their hiding place in some secret valley or other, and there they are, sending little messengers out across the river and the plain to some village which is suspected of concealing the enemy.

There is at least one thing to be said in favour of our war in Macedonia—it is possible to look at it. There is no question of sitting dismally in a trench and squinting round corners through a periscope. When you are up with a battery, you can generally watch the shells arrive at their journey's end, which is much more satisfactory than being informed through a telephone that some invisible target has been hit. It is possible to sit on a hill above the guns and see quite plainly what they are doing. You may watch a village being literally taken to pieces.

---

## IN SALONICA WITH OUR ARMY

---

It is all rather curious. One cannot feel much sympathy for the average Macedonian village. It does not look as if anybody loved it ; if one had the dreadful misfortune to be born in such a place one would, I think, desire most urgently to forget the fact. But even so it is not possible to forget that it was once the habitation of men, and that children played round those ugly little houses before war came and sent the bullock wagons creaking down the road. It all seems rather a pity. . . . But presently interest gets the better of emotion, and one watches with an increasing pride the careful, accurate work of the men at the guns, as bit by bit the village jumps into the air amid a cloud of dust and vanishes. How such accuracy is achieved one cannot tell, but there it is, and it is a fascinating thing to watch.

Observed under those conditions, war becomes almost impersonal. Instead of being a thing of passion and emotion, it is a cold-blooded game of skill, in which all the players, down to one's very self, are just

---

## SUNDAYS AT THE WAR

---

pawns. Possibly the enemy is trying to find and silence the battery, and his exploring shells are bursting at varying distances around. It does not matter. There may be a consciousness that if one shell landed at one's feet the consequences would be disastrous, but then it seems—and is—so very unlikely that any shell would land in so inconvenient a spot, that the question of personal peril simply does not arise. So, too, if the glasses show little figures flying from the village below, and some of them crumple up and fall—it does not feel as if the final catastrophe had overtaken some human beings; it is simply that some pawns have been removed from the board. It is all in the game, the fate of those little distant figures, the fate of the men one knows, one's own fate. Those shells bursting around do not stand for the menace of pain and death so much as for tokens of the enemy's failure to be as clever as our men. The gunner is more of a scientist than a warrior, and the emotions he gets out of war are not unlike

---

## IN SALONICA WITH OUR ARMY

---

those which you find in golf or cricket, or any game of skill.

If you wish to get down to the stark realities of war, outpost and patrol work can be recommended. Charging trenches or other positions is all very well for war-frenzy, but the night work is the thing to drive home the sheer facts of conflict and peril and the worth of individual superiority. Sometimes if you go down from the batteries to call on the men in the front line they will let you lend a hand if anything is going to happen. It is necessary, of course, to be careful how you invite yourself, and to avoid attracting the attention of commanding officers and adjutants. It is not altogether that they want the whole affair to themselves. They are not so much greedy over the war, as concerned about what might happen to them if by chance you were killed while on their hands, and they were called upon to explain why you were there. I am not aware of any regulation forbidding one to go and study the war at close quarters, but there

---

## SUNDAYS AT THE WAR

---

are so many regulations in army life that one is always apt to think that anything out of the ordinary must be in disobedience of an order which one has for the moment forgotten.

Going as a member of an outpost company in unfamiliar country at night is always a good adventure. The men fall in so quietly on the dim parade-ground, wherever and whatever it may be, and the business begins to be interesting at once. It grows still more interesting when, with only a whispered word of command they begin to move off and vanish, so that when your turn comes and you follow, it is only possible to see the few who are immediately in front of you, and all the rest are folded away in the darkness. That is the time to test a man's power of marching at night. If the battalion is without experience of the game that progress will be slow, very uneasy, and very noisy. But the old hands go very softly and quickly onward. They avoid obstacles at whose existence they can scarcely guess; they

---

## IN SALONICA WITH OUR ARMY

---

choose the surest way by instinct, and never do they commit that major crime of showing themselves on the skyline.

Outpost work in Macedonia is so fascinating because the country varies so incessantly and so greatly. There is a different problem to solve every time. You have to choose the line which, in your opinion, can be held, and then you have to make your arrangements for holding it, and that in a country of innumerable hills and valleys. There come to the mind all sorts of crowding pictures. The golf enthusiast goes about the country planning imaginary links across each fresh landscape; the soldier, if he is just an ordinary infantryman, is more likely to be arranging outpost schemes. And when it is night, and the tangle of hills is suggested rather than seen, and roving bands of the enemy may be anywhere in the darkness, the game becomes really worth playing. Sitting now in quiet security and looking back, one sees how good a game it was.

One night there was a sharp little rock-

---

## SUNDAYS AT THE WAR

---

strewn hill to climb, and the ridge of it had to be crossed somehow. Luckily the ridge itself was covered with great boulders and we threaded and crawled through them till we were safely established on the far slope. Then, just as we were about to make our dispositions a messenger came back from the scouts who were pushing on ahead. A party of the enemy was crossing our front. There was a quick, whispered word, and our men sank out of sight among the rocks, and no sound gave warning of our presence. But very soon there were sounds which told of the coming of the others, and they came and passed, not twenty yards away. Their strength was about equal to our own, and, taking them by surprise, we should have had all the advantage, but it was not our business to advertise our presence, and so long as they did not turn towards our camp in the rear, they must go unharmed and in ignorance. In ignorance they went, turning back to their own place, and presently the sound of their passing died away, and

---

## IN SALONICA WITH OUR ARMY

---

we could get on with our own work.

Encounters of that kind have been frequent on the Struma front, and most men who have been down there for any length of time could tell of something of the sort happening to them when they have been out on patrol duty. Sometimes, of course, it is necessary or advisable to fight. (Rather I should say it is permissible. There is no waiting for necessity, and the patrol commander who, acting on strict orders, forbids an encounter is rather more unhappy than the men under him.) Those are the occasions when the bayonet does some of its deadliest work. Shooting is usually to be avoided, since it gives away so much information and wakes up the artillery, so there is the fierce, quiet struggle in the dark, till the survivors of one side or the other realize that there is nothing for it but to slip away among the shadows.

In these affairs, as in all the operations of war, the tricks of chance are unaccountable. One man I knew had a piece of bad luck

---

## SUNDAYS AT THE WAR

---

quite equal to that of the man who got a bullet through his body while he was sitting at tea. This other had been out with a patrol. They had had a highly successful trip and were returning unharmed and jubilant. They were close to our lines when some distant Bulgar loosed off another of those random shots at the sky. In its downward flight the bullet took my friend's right eye out almost as neatly as a surgeon could have done. He felt, so he says, very little pain either at the time or at any time afterwards, but his disgust was tragic. Later on I found him, still fuming, in a hospital in Salonica, roaming round the wards in pyjamas and a dressing gown, because he had nothing else to wear. His kit had vanished. When he was hit he had only been wearing a shirt and shorts, and he had been waiting for some clothes for a fortnight, waiting for them to come so that he might sail for home. He seemed to consider that luck had deserted him completely.

But on the whole the Struma valley would

---

## IN SALONICA WITH OUR ARMY

---

be quite a happy place if it were not for the mosquitoes. The trouble about Macedonia is that you have so many things to fight. There is the landscape to be conquered, and the water to be kept in order, and malaria to be opposed, and all these things must be done before you can pay any serious attention to the Hun and his companions. So on the Struma the real weapons are mosquito nets and quinine, and the real enemy is that deplorable insect which sits on the side of the bivouac hanging its head so sheepishly in the morning when it has spent all the night in taking blood out of one's body and putting poison in.

In spite of mosquitoes, however, we always looked forward to those Sundays. It is true that the work we were doing was important and even necessary, but it was very dull, and it was not a bit like war.

## CHAPTER XI

### PLAYTIME IN MACEDONIA

**P**LAYTIME is really a serious problem in Macedonia. While we remained at Lahana and could have those Sunday excursions we were quite happy, but there were only three such Sundays, and then we returned to the old, familiar condition of having plenty of time to spare and absolutely nothing to do with it. I should think there never was a country so empty of the means of entertainment. Since our transport usually consisted of pack mules, we could carry nothing with us that was not absolutely essential. The weight of our kit was constantly being checked, and if it exceeded the standard of the moment something had to be left behind, and our track was marked by abandoned articles of clothing and other personal tackle.

---

## IN SALONICA WITH OUR ARMY

---

Under those conditions the utmost that one could carry in the way of apparatus for recreation was a pack of cards, and curiously few of us had packs of cards to carry. Even if we had them, they were hardly ever used. During the whole of the time I was in the country I only played bridge twice, till I went into hospital. It did not seem to occur to us to play games.

There were no collective amusements at all. It is possible that there were in the land battalions who possessed concert parties of their own and had regular entertainments, but I did not come in contact with them. It is a little difficult to have concerts without a piano, and the army is not encouraged to carry pianos about Macedonia. There was one in the Y.M.C.A. tent in the old base camp at Karaissi, but I did not see another until I was on the boat which took me away, nor did I see another of the tents of the Y.M.C.A. Very likely there are units which excel in camp-fire concerts, but we had no gifts in that direction. It did not occur to

---

## PLAYTIME IN MACEDONIA

---

us to sing, just as it did not occur to us to play cards, or, indeed, any other games. I suppose we might have played football if we had owned a ball, but we had nothing of the sort, and no one felt the lack of it badly enough to send for one. The various units stationed in and about Salonica used to play matches at times, but we up-country people had nothing to do with those festivities, nor any chance to take part in them.

Some units took more pains to amuse themselves than we did. I have heard of at least one battery of the artillery which owned a gramophone and took it all round the country, but of course in the artillery there is a chance to carry such things. And one day, upon those hills north-east of Ambarkoj, I discovered evidence that at least one member of the Salonica armies had a desire for collective amusements, for the wind brought to me across the tangle of the evergreen oak a sheet of paper which I found to be a copy of a seventeenth-century madrigal. It seemed a curious thing to find there,

---

## IN SALONICA WITH OUR ARMY

---

on those lonely, distant hills, so far from all those choral societies and glee clubs and the like with which we noise-making people delight ourselves. It is not possible to understand why a man should have brought such a thing so far unless he had with him companions who would help to sing it, and one imagines that there is, somewhere in Macedonia, a battalion accustomed to music. It would have been a happy thing to have found that cheerful camp, but all the country round was bare of troops, and the madrigal itself was so weather-worn that it must have been blowing to and fro on those hills for a long time. I put it in my pocket and I have it still, a curious relic of the army and of the country where for so long our men have had to face the difficult task of keeping out of mischief.

For of course the natural thing to do if you have time to spare and no occupation is to get into mischief, and if we had been living under those conditions in any ordinary country it is possible that there would have

---

## PLAYTIME IN MACEDONIA

---

been a great deal of trouble. But the country is so far from ordinary that there was very little trouble indeed. There were of course shops in the villages where liquids prejudicial to discipline could be obtained. On the counter of nearly every Macedonian shop you will find three bottles containing Vin Samos, mastic, and cognac, and it did happen from time to time that some unlucky private would be taken with a terrible thirst, contrive to get past the military police into the nearest village, and proceed to empty bottles of cognac. Then he would return to the camp in a condition of valiant frenzy which would lead him to the guard-room and first-hand knowledge of Field Punishment No. 1. But such incidents were very rare. Most of the villages are so small that it is quite easy to keep the thirsty souls out of them, and our men behaved wonderfully well.

Their conduct was the more creditable because it frequently happened that for weeks at a time it was impossible to organize anything in the shape of a canteen. When the

---

## IN SALONICA WITH OUR ARMY

---

camp was pitched away among the hills where neither beer nor any other stores could be obtained, the canteen ceased to exist until we moved to some happier spot, where day by day the little bullock carts would come rumbling and creaking with the barrels, and there would be tinned fruit, sardines, cigarettes and other luxuries on sale, and time would not hang quite so heavily on their hands.

But even when the canteen was in working order it could not occupy more than a little of the spare time, and it was always rather hard to discover just what the men did with themselves. Of course most of the leisure hours in the hot weather came in the middle of the day when the heat is too great for any kind of exertion. During those hours they would lie in their bivouacs, and sleep or talk. They were great talkers, those lads of ours, and they would go on, hour after hour. What they found to talk about I cannot say, but it is the same all through the army; and you will never find a camp that is not

---

## PLAYTIME IN MACEDONIA

---

humming with talk through every idle hour.

So they would talk, and attend to their clothes and kit, and do their washing. There are no laundries in Macedonia, and the ladies of the land have not realized that they could make a very good living by taking in washing. Their general appearance forces one to the conclusion that they are unaccustomed to the idea of washing their own clothes, so probably they would be intensely astonished if they realized we should be quite prepared to pay them to wash our things. But if he cannot find any one to do it for him, the soldier is thoroughly capable of doing his own washing, and usually he does it very well. Disdaining the slipshod habit of using cold water, you may see them building tiny fires and boiling the water in their mess tins, and soaping and scrubbing the clothes with skilful energy. One of our men actually owned a little flat-iron, and it was as hard-working a piece of metal as I have ever known. It was constantly being borrowed by the dandies, who sought to increase the

---

## IN SALONICA WITH OUR ARMY

---

beauty of their shirts or to give a finer finish to their socks. And I know that my washing was done as I have rarely had it done by any laundry at home. The soldier has the trick of doing thoroughly all the infinitely varied jobs which he may have to undertake.

It is possible that many men will bring back hobbies from Salonica. It was quite interesting to notice on hospital ships and in hospitals on the way home how many owned those little pocket chess boards and sets of pieces which can be folded into the shape and size of a note case. Then there were others who had taken up sketching, and some who had carried round little volumes of poetry and read them till they knew every line by heart. There is, of course, nothing to read in the up-country camps except the *Balkan News*, and such books and papers as may be sent from home. There can be no camp libraries, nor are there any of those distributions of papers and magazines which brighten the life of our men in France. In consequence every one reads everything

---

## PLAYTIME IN MACEDONIA

---

that comes from cover to cover, and advertisements get an amount of attention which would make the fortune of the advertisers if only their shops were not so far away. Papers and magazines and books are passed from hand to hand while they will hold together, and nobody minds what he gets hold of so long as it is some print which he can read. If you see, as I have seen, an entirely illiterate Irishman poring over the *Saturday Review* it does not mean that ours is the most intellectual army the world has ever known. It only means that he is very bored with the cycle of his thoughts and that printed words, incomprehensible though they may be, are giving him a little blessed relief. I have known what it is to be profoundly charmed and affected by the information, gleaned from the columns of a local weekly, that Mrs. Smith of Smith Villa, requires a house-parlourmaid, that there are three in the family, that two other servants are kept, that the wages offered are £18, and that an abstainer is desired. If I had not

---

## IN SALONICA WITH OUR ARMY

---

been soaking up those details I might have been listening to some one who would say, "But the A.S.C. say that if we do advance they can't feed us. . . ."

Everybody knows that people whose working hours are full of the most violent physical exertions do quite commonly seek more exertions when playtime comes, and so it was with us. Every now and then the entire camp would seem to be taken with a mania for hurling large stones about. You would see men standing in rows and throwing great pieces of rock in the fashion laid down for the throwing of bombs, and they might keep it up for half an hour in a valiant contest. Our bombing expert was usually in the thick of these outbursts of energy, improving the occasion with a few words of advice. He was one of those enthusiasts who believe utterly that the war can only be won with the aid of their own special line, and nothing would have pleased him more than to have had a whole battalion of bombers.

One other amusement we had which called

---

## PLAYTIME IN MACEDONIA

---

for plenty of exertion, and was occasionally profitable to the mess. We used to get our revolvers and go out looking for hares. Macedonia is simply alive with game in certain areas. It seems impossible to walk a couple of hundred yards without putting up a covey of partridges or a great, galloping hare. To go hunting hares with a revolver is quite amusing, though of course it is not regarded with favour by those aristocrats who have shot guns and treat themselves seriously as purveyors of game. But if you have no gun, and are very weary of seeing large quantities of desirable food escaping from you it is soothing to take your Webley for a walk round the hills. Of course it is more a matter of luck than anything else. A service revolver is a wonderful weapon with a great range, but it takes a crack shot to put a bullet into a retreating hare, and so to hit it, moreover, that the animal shall not be reduced to a shapeless mash of fur and flesh and splinters of bone. But if by some fluke the bullet just chips the head,

---

## IN SALONICA WITH OUR ARMY

---

the prospect for to-morrow's dinner is suddenly and wonderfully improved, and there is ample recompense for three hours of scrambling over rocks and through thickets of brambles.

The evening was the time when we went on those excursions, and the evenings of Macedonia do very much to atone for the rest of the day. And it was good to come back to the camp, and to sit on a bank outside the bivouac watching the pageant of the west, listening to the guns as they grew busy with the evening performance. That was the time when the mess president would send for the jealously guarded bottles and we would sit through that half-hour before dinner, quite cheerfully discussing the things we had discussed half a hundred times already, having recovered from the weariness and irritation of the day, being at peace with the world.

That was, perhaps, our only real recreation, the only game we played consistently—just that game of sitting and talking in the deli-

---

## PLAYTIME IN MACEDONIA

---

cate evening air when all the work was done and our bodies were tired enough to get the full flavour of enjoyment out of rest. Probably they were very monotonous conversations, but indeed they do not seem so in retrospect. The memory of those hours is very pleasant. And there was always something to watch, if it was only the shifting of colour on land and sky or the slow departure of the light.

We learned that it is not necessary to be amused. I fancy that many of those who return will find that a gulf has established itself between them and the friends who have remained at home. When at last I was set free to be with my own people for a little while it was with an actual sense of surprise that I realized that it was considered usual to go out in the evening to theatres and music halls and concerts, to dine at restaurants, to play games, and generally to avail one's self of the elaborate machinery of entertainment. That machinery seemed to have lost all purpose and value. It did not appear that there

---

## IN SALONICA WITH OUR ARMY

---

was anything of worth in the activities of the professional entertainers ; it seemed so much better to sit still, to talk a little from time to time, to revel in that little space of rest and dear companionship.

I suppose there is something which tends to simplicity in such a life as that which we were leading—a simplicity which is not of the surface, but deeper. We did not acquire scorn of pleasant food, of good clothes and comfortable beds, but our minds, unwearied by the complexities of modern civilization, did not require such laboured amusement. They were content with a little dreaming as the flames of the camp fires went stabbing upwards ; for long enough to come we shall find a sufficient splendour in sitting at the close of day by our own hearths swathed in the secure comforts of peace.

## CHAPTER XII

### HOW WE WENT TO JANES

**T**O us at Lahana there came orders to pack up our traps and depart in haste to a place called Janes, on the other side of the country. It may be as well to remark that it is not customary to pronounce this name as if it was the plural of Jane. It is more usual to make the sound Yanesh, with the accent on the -esh. The letter j in Macedonian names has the force and qualities of y, and if this is remembered there will be no difficulty with them. It is true that even so the pronunciation will not be exactly that of the people who live in the villages, but no arrangement of letters would do justice to the noises they produce, and they always understand when we speak the names in our own-fashion.

---

## IN SALONICA WITH OUR ARMY

---

So much for the name. Janes, as the map will show, is a place which lies behind the Doiran front. It was the pleasure of the authorities to send us from time to time to sit down behind different portions of the front, to listen to other people busy with the war. We never knew why we were sent. It did not appear that anybody ever wanted us, nor did anybody seem glad to see us. But it was an order, so we tramped to and fro across the country, gaining much knowledge of hill and valley and mountain track, and hoping eternally that at the end of each journey we should really find the war. There is something very cheering about the tidings that the battalion is ordered to make haste to a distant place. It sounds as if something is really going to happen at last, and that thought is enough to banish all weariness. In this instance the orders came at eight in the evening after a hard day's work, and it was stated that we were to be ready to march out at ten. Nothing but the prospect of a fight at the end of the journey could make troops

---

## HOW WE WENT TO JANES

---

cheerful under such conditions. To be told to pull down your house and pack it up just when you are thinking of crawling indoors and going to sleep is depressing.

But rumours help one round some awkward corners in the army. Within an hour the camp had been swept away and folded up. Down in the transport lines mules were entering their usual protests against pack saddles, and little groups of officers were poring over maps by the light of the dancing flames of candles. We knew those maps by heart, but we could never resist the temptation to stare at them on such occasions. It was as though we hoped to discover something that would improve our chances of getting into the firing line, as though they held the secret of our fate concealed among their innumerable contours. And as we traced the way we talked, eagerly and happily, and for a long time no one thought to quote that classic saying of the A.S.C. which had killed so many of our dreams.

So it came to be ten o'clock, and under

---

## IN SALONICA WITH OUR ARMY

---

the light of the stars we scrambled across a mile of furiously broken country to our old friend the Seres road. The length of time which a battalion requires to get under way at night depends very exactly on its experience. If it is a new, half-trained unit there are delays which spoil tempers, and the adjutant rides up and down the line with fury increasing in his heart. But there are no such troubles when you have old hands to deal with. Everything slips into its place swiftly and easily. The transport does not go wandering off across country in the opposite direction, and the ammunition mules are ready behind their companies. Far away in England we had objected to night operations, but in Macedonia we realized what we gained through having been trained and drilled in the dark. In a very little while we were moving off down the road.

Somewhere between Likovan and Güvezne—its exact position is a matter of no importance—there exists a rest camp, established for the use of troops whose business

---

## HOW WE WENT TO JANES

---

it is to move on the road. Why it was pitched in the particular position which it occupies I do not know ; it is possible that nobody knows. To be sure there is a convenient water supply, but there is nothing else to recommend it. It is arranged on a series of sharp little ridges, with deep ditches and gullies crossing it in all directions. When the marching men come to the gate of it they are met by others bearing lanterns who proceed to conduct them through the perilous gloom. In most places it is necessary to go in single file, and for a battalion to pass a point in that fashion takes some time. More of the lantern-bearers take charge of the transport, and lead it off to another place, so that you are effectually divorced from your kit and stores. The ground reserved for officers appears, in the darkness, to be so cleverly fortified by ditches that no one could possibly reach it unless he had spent his life in studying the arrangements. By the time you get to that high bank, and see below you the little lights which mark the lines where

---

## IN SALONICA WITH OUR ARMY

---

the men are resting, and a dim, distant confusion which conceals the transport and all your blankets, you are apt to be out of love with Macedonia.

It was my fate to come twice to that camp, each time on a dark night. In the morning it looks rather pretty, and there is a good view, but nothing can persuade me that it is a nice camp, or that the man who chose such a position for it has a kind heart. On this occasion we reached it between one and two in the morning, and the fact that we had been there before did not make things any easier for us. It was nearly an hour and a half before the tangle was straightened out and the blankets appeared, so that we could roll ourselves up and sleep for a brief two hours. We left the place soon after five, and marched off down the road once more, on the second stage of our journey.

If you look at a small map of Macedonia you may wonder why we were going down the Seres road to get from Lahana to Janes. It will seem that the more direct way would

---

## HOW WE WENT TO JANES

---

have been across country by Rahmanli and Kukus, but if you study a really large map you will see why we had to work back towards Salonica first. Lahana stands on its hill-top in the heart of a great tangle of hills. To travel direct from there to Kukus would mean an endless swarming up high places, an endless scrambling down into sudden valleys. A very few strong and well-practised men might make the journey in the time we took over the detour, but it would be impossible for a battalion with its transport to travel that way without the most serious loss of time. The Seres road is indescribably bad, but it is the only way across those hills which is in the least practicable. There is no other way of getting to Lahana which an army could use. Five miles away on either side of the road you might dwell remote and inaccessible, untroubled by the motions of the world.

The hills run up from a point just north of Salonica in a fairly well defined range which parts the valley of the Galika and the plain

---

## IN SALONICA WITH OUR ARMY

---

to the west of it from the valley of the Kuru-dere and the plain which holds Güvezne. To the north of Ambarkoj the hills spread out fanwise, and go piling up in heaped confusion all the way to the Struma valley. The only way of getting from the Struma to the Doiran front is to travel down almost to Güvezne and then to strike westwards and across the hills at Ambarkoj by way of Salihli. That route is practicable in summer, if you have nothing very heavy to drag with you. but in all rainy weather it is quite impossible, for then the dry beds of streams become fierce torrents with power to sweep a man's feet from under him. Either you must make bridges, or you must go round by some other way where bridges are already in existence.

But though summer had passed into autumn the rains had not yet come, so we went to Güvezne, rested there on that unhappy plain through the heat of the day, and turned our faces to the west in the evening. Being as it is the gate between the two fronts with which our men are concerned, I suppose

---

## HOW WE WENT TO JANES

---

nearly every unit in the Salonica force has passed that way at one time or another, and has known the relief of climbing from the plain where the flies make a constant cloud about man and beast to the hills where they drop away and leave one in peace. Certainly the people of Salihli are quite accustomed to the passing of the army, and they have learnt more of our ways and desires than most of the villagers ever trouble to learn. Directly the column appears in sight there is a mighty searching and ransacking of all the places where the fowls do commonly lay the eggs, and then the population lines up by the roadside ready to do business. The Macedonian egg is not cheap. Almost everywhere a drachma—which is tenpence—is charged for four, but eggs are much to be desired, and though some may object, every one pays. The right thing to do when you are entering Salihli is to work towards the head of the column and do your shopping before the others come up, or all the eggs will be sold, and the natives will only have toma-

---

## IN SALONICA WITH OUR ARMY

---

toes and woolly-hearted melons to offer.

We reached our camping ground above Ambarkoj at eight in the evening, having covered twenty-four miles in twenty-two hours. That would be little enough in a civilized country, but in Macedonia it is rather more than it sounds, and we were weary people. But, high on those hills, there was enough light remaining for the arrangements for the night to be made properly, and for the cooking to be done. There was a comfortable meal for every one, and when it was over we sat, very many of us, looking towards the hills which fence Lake Doiran, watching for the flash of the bursting shells, full of the contented weariness which is the great reward of such campaigning as ours. We slept late the next morning. Our orders were to reach Janes in the evening, and it did not seem necessary to arrive earlier. We breakfasted at ease between nine and ten, and proceeded to pack once more, taking our time about it, refusing to be disturbed. We moved out of the camp in leisurely fashion at

---

## HOW WE WENT TO JANES

---

1 p.m., breaking for the first time that rule which forbids marching in the middle of the day. We were whole-hearted admirers of the rule by the time we had finished the journey.

Every soldier can remember one march which stands out as the worst of all his experience. Usually it occurs in the course of his training, while he is being broken to the burden of his new life, but it does occasionally, through force of circumstances or by reason of the malice of the enemy, come later. That march from Ambarkoj to Janes was the most abominable I have ever known, and I suppose if I live to be an old man with lots of small people round me who want to know what I did in the great war, I shall bore them to death with accounts of it.

The personal side of the matter is utterly unimportant, but that small experience does stand as a very fair specimen of the kind of thing our men have had to put up with in Macedonia. Many people seem to imagine that our life in that irritating land has been

---

## IN SALONICA WITH OUR ARMY

---

one long picnic, remote from the perils of war. It is not, however, our fault or our choice that we had so little actual fighting, and the only sort of picnic which our experiences could be said to resemble would be one in which the picnic basket had been left behind and half of the party were more or less ill all the time. So far I have said little about malaria, the greatest of our foes in Macedonia. It will be necessary to say something about it later on, but for the present it is enough to record the fact that a touch of the fever came upon me just as that march was beginning, and remained with me for four out of the five hours which the journey occupied. Add to this the facts that through some misunderstanding about the water supply, hardly any one had a drop of water in his bottle, that the sun was blazing over head, and that our way was deep in dust where it did not lie among scorched, ensnaring herbage, and you will realize that the conditions were not the most favourable that could be imagined.

But our men have had to march under

---

## HOW WE WENT TO JANES

---

those conditions very many times. They have had to endure the heat and the dust and the maddening thirst of their fever-shaken bodies, and all that hideous torment of the brain which at such hours can find no rest in even the dearest and most sacred of memories, but sees them as things distorted and terrible. At such a time one can only keep upright while moving. At every halt it is necessary to lie down quickly, till the moment comes to move forward again. To sit on a horse would be impossible ; there is nothing to do but to go staggering on. There are visions of all cool springs and clear, cold water which come to cheat and baffle and mock, together with recollections of all the delectable drinks in the world. At one time I was dreaming of the drink called John Collins which they compound so admirably in the Khedival Club in Alexandria ; at another there was the memory of the lager beer which comes to one in tall glasses at the Café Royal ; again it was a vision of an inn I know in Derbyshire where the good beer is

---

## IN SALONICA WITH OUR ARMY

---

brought in great earthenware mugs. And all the time there were some words from the Mass running a hopeless, meaningless race through my useless brain—*qui nos præcesserunt cum signo fidei et dormiunt in somno pacis*. It was a thoroughly unpleasant business, and I could not for the life of me understand why the Romans found it necessary to have two words for “sleep.”

I want to insist that I am not writing of this experience as a hardship which I suffered alone. I have no hard case to present for sympathetic attention. Hundreds and thousands of our men have endured as much and more in that country, and for that reason only the thing is mentioned. Their suffering, their misery, must be set down to the account of the Salonica force as surely as the agony of the wounded is credited to the account of our troops in France. We were bitten by mosquitoes instead of being shattered by bullets, but the result was not different in the end, and one can do no more than go on suffering up to that point where Nature sends

---

## HOW WE WENT TO JANES

---

the saving gift of unconsciousness ; there is that limit fixed to all that a man can endure, and it has been reached not once but very many times by those who have played their part in the war by marching up and down and across Macedonia. And there are graves in that remote, inhospitable land.

These things must be written if justice is to be done. There is a great tendency to regard the wounded man as being on a far higher plane than the man who merely contracted sickness in the service of his country. The wounded man is given gold stripes to wear. If he is an officer he is presented with a large sum of money as a wound gratuity—but there is nothing for the man who has merely fallen ill. He may be one of those who came away from Gallipoli with their constitutions shattered beyond hope of repair by dysentery ; he may be tortured and twisted and crippled with rheumatism from the trenches in France ; he may be so poisoned by malaria in Mesopotamia or Macedonia, that the trouble will remain with him while

---

## IN SALONICA WITH OUR ARMY

---

life lasts, but in any event there is nothing for him. He has no gold stripes or gratuities, nor is it likely that his pension will reflect what he endured. In hospitals, in convalescent camps, and even at home in England, he is given to understand that he is a bit of a failure—a “wash-out” in the slang of the day—and not to be compared with some lucky youngster who has had a finger shot off or a tibia fractured.

I want to suggest that this is damnably unfair, and I can do it the more freely because in my own case the damage is unimportant. The fact that I shall be liable for years to attacks of malaria will not affect my power to earn my own living after the war, so I am free to speak. And I want to suggest and to say as loudly as possible that the men who have been made ill in the service of their country do deserve every whit as much consideration as those who have been wounded. Their bodies are frequently damaged to a far greater and more permanent degree ; the damage was incurred in exactly the same service.

---

## HOW WE WENT TO JANES

---

No one who has belonged to the Salonica forces can avoid feeling strongly on this point. Every soldier who is invalided home is an object of interest, at first. "Hullo, where were you hit?" is the unvarying question. There comes the reply, "I wasn't hit. I was at Salonica." There follows the unfailing comment—"Oh, I thought you were wounded." And that kind of thing is irritating to a man who knows that every few months for the rest of his life there will come a time when he will wish with all his heart that he had lost a leg or an arm or an eye rather than endure the misery which is his portion.

Having said these things I may perhaps record the fact that after four hours that particular attack of fever passed off, and I marched very happily into our camp at Janes, as anxious as any one to know about our chances of reaching the war. There came to us a lost, disconsolate staff officer, who desired to know what we belonged to and why we had come.

---

## IN SALONICA WITH OUR ARMY

---

“I’ve heard nothing about you,” he said when his questions had been answered. “I’d no idea you were coming, but I suppose it’s all right. No, there’s nothing for you to do up here. The usual strafe is going on at Doiran of course, but nothing to worry about, and you won’t be wanted anyhow. But we’ve got heaps of blackberries round here, and perhaps your chaps would like to make some jam.”

It was Macedonia and we were accustomed to Macedonia, so we did not say anything. There are so many occasions in that country when speech would be utterly inadequate, and we had learned how to be silent. We had marched to the place in haste, but we were not wanted. Up there by Doiran a few little miles away the guns were thundering, but we were not required. The war had done without us for so long, and it was still able to worry along without us. In the meantime there were blackberries, and we had permission and encouragement to make jam.

---

## HOW WE WENT TO JANES

---

You may find it hard to believe, but it is written in the history of the regiment that we settled down in that camp and proceeded to make jam.

## CHAPTER XIII

### CONCERNING SPIES

**T**WO or three days after we had settled down at Janes, a Hun came over to see what he could do for us. There were some anti-aircraft guns between us and the frontier, about three miles from our camp, and they did their best to argue with him. For a full five minutes we were admiring a pretty arrangement of smoke-balls which fluffed out of nothing in positions all round the tiny speck of the aeroplane, but he was a wise Hun; and he travelled high overhead and came sailing on, beyond the reach of the unpleasant splinters which our friends tried to scatter in his way. He came on and on, and at last he was circling very happily over our camp. If he had not been so wise, he would probably have come down a few

---

## CONCERNING SPIES

---

thousand feet to make sure of his aim, taking his chance of what our rifles might do. As it was he dropped his bombs from something over ten thousand feet, and we had only a horse and a mule to put in the casualty list. But his coming left us full of solemn thoughts about the local Macedonians.

The average inhabitant of Macedonia is so curiously inaccessible. He lives in his terrible little villages, and seems to watch our progress with sullen, incurious eyes. He may stand upright for a time to watch the passing of our men, but soon he bends once more to his toil as though the matter did not concern him. If he keeps a shop he will sometimes condescend to sell his goods, in the same sullen fashion. He takes refuge all the time behind the barrier of his uncouth language.

The army has the gift of tongues in no small measure. I have seen new drafts come out to Egypt, and I have heard them a fortnight later with all sorts of Arab slang at the tips of their tongues. Our men bring back

---

## IN SALONICA WITH OUR ARMY

---

words in many dialects from India, and the South African war made some enduring additions to our vocabulary. But there is another tale to tell in Macedonia. Why it should be I cannot imagine, but no one seems to pick up the language. At the end of my own time I only knew three words. I could make the noise which means eggs, and the other noise which means water, and one other which is a term—probably obscene—expressing hatred coupled with a burning desire for the person addressed to depart at once. We had a few men, born traders, who were sent regularly into the villages to buy eggs and fowls and fruit, but I could never find that they had learnt much of the language. They seemed to conduct their business entirely by signs, and I found myself that the only way to go shopping in Macedonia was to walk behind the counter, open all the drawers and cupboards and inspect the stock for myself, and then strike a bargain by signs. The language is, I suppose, a more or less debased form of modern Greek, but in many of the

---

## CONCERNING SPIES

---

villages there is so strong a Turkish element that Arabic terms are frequently understood.

But whatever he may understand of an alien tongue, the Macedonian makes no sign. He remains silent and inscrutable. We are in his country—well, that is our affair. It is nothing to do with him and he will have nothing to do with us, unless we damage his crops. Then he will come demanding compensation, if he has no woman to send to speak for him. Of course a certain number of the men of the country have been enrolled in labour battalions or hired to act as mule-teers, but the people of the up-country villages remain untouched, to outward seeming, by all the raging of war. They see our columns moving to and fro, and go on their own way unheeding. We send our fine new roads sweeping past their villages, but they cling to their time-worn tracks and pass with averted heads. They are not even sufficiently interested to seek to make money out of us by catering for our wants.

So it might seem that these people were

---

## IN SALONICA WITH OUR ARMY

---

determined to ignore our presence in the land, and to treat us as if we did not exist—it might seem like that to any one who did not know the facts, who had forgotten how the Hun set himself to permeate, that he might eventually dominate, all the Balkans. The German was in the land before us, and his agents remain to bear witness of him. Other maps are being made in these days, but for long enough our armies in Salonica could find none but German maps of the land—wonderful maps, crowded with a wealth of laborious detail which could not smother blazing inaccuracies. The German influence which has made Greece so bothersome is living still in all sorts of little villages of the plains and hills of Macedonia. Many of those sullen, silent peasants have excellent reasons for serving the German interest—reasons which take form and substance in tangible rewards. They learned the lesson before ever the war began to trouble Europe, and they have not forgotten. Because they have not forgotten that Hun came over to

---

## CONCERNING SPIES

---

drop his bombs into our camp at Janes.

A camp which is composed of bivouacs is not a conspicuous object. It nestles down so close to the ground, and there is nothing in its colouring to catch the eye. Tents, even when they have been darkened and adorned with smudges of brown and yellow and green have their distinct and defiant shape and are hard to miss. But bivouacs are hard to detect from a distance, and a high-flying airman would need to search very carefully before he found the camp. To make sure that our camps shall not be missed, and to guide his friends on the other side of the frontier, the innocent Macedonian strolls out of his village, makes his observations, chooses a spot which fulfils his requirements, and starts a prairie fire. He works on a system which is thoroughly understood by those whom he seeks to assist, and in a little while the aeroplanes are coming over to investigate and perhaps to take action.

So it is that if a fire starts anywhere in the neighbourhood of a camp, or along the line

---

## IN SALONICA WITH OUR ARMY

---

of march, the first thing to do is to look for somebody to hang. It might be an accident, of course, but such accidents are not usual, and it is better to make sure. Following upon the visit which we received, a small party went out to pay some calls in the district, travelling in a motor borrowed for the occasion, and with carefully loaded revolvers. Attached to the party was a Macedonian who could speak quite twenty words of English, and claimed to be a follower of M. Venezelos, and our devoted friend. In addition he declared that he had personal knowledge of all the people of all the villages for miles around and knew the records of all the bad characters. There was, he said, a spy hiding in one of the villages, a man for whom the authorities in Salonica were searching. This man we must capture, and all would be well.

Motoring in Macedonia is not a pastime for the idle rich. The way for that journey lay along the roughest of tracks, far from any of the roads which the army has made.

---

## CONCERNING SPIES

---

It was a matter of bumping painfully from one village to the next, with occasional halts where the whole party had to turn out to help the car over some particularly vicious little gully. And at every village there was a weary round of apparently fruitless talk. First there was a search for the chief man of the place. Then when he was found, our Macedonian would lead him aside with an air of gravest importance. The talk would go on sometimes for as long as half an hour, and sitting in a car under the blistering sun amid the varied smells of a Macedonian village for half an hour is not pleasant. Meanwhile the inhabitants would come out to stare at us with lowering faces. I remember one old woman. Not for a moment did she cease her business of threading tobacco leaves on a piece of string, but all the time she was glaring at us with the deadliest hate, the ugliest, bitterest fury seamed across her old, brown face. She might have been the mother of the man we sought.

But always the report was that the elusive

---

## IN SALONICA WITH OUR ARMY

---

person had moved on to the next village, and to the next village we must go, bumping over some more kilometres of those intolerable tracks, and at last we began to cherish hard thoughts about our guide. He seemed to feel that there was trouble brewing, for suddenly he sprang up and pointed far out across the plain to where a man moved slowly behind a flock of goats. He was out of the car in a moment, and racing over the ground while we toiled behind him. He reached the shepherd long before we did, and when we arrived he turned to us with a glum face and an air of intense depression. This, we gathered, was not our man after all. It was his brother, a good man, and a friend. The man whom we sought—he was far away. The good brother had not seen him for many weeks. All the foolish people who had been directing us had been helping us to find the good brother, and now there was nothing to be done. Every one knew that this was a good man.

There are some problems which are too

---

## CONCERNING SPIES

---

hard even for the army, and plumbing the depths of Macedonian character is one of them. Perhaps the man was lying all the time, but we had no evidence. We were quite helpless in his hands. The stolid shepherd did not seem to understand a word we said ; he stood there behind the defences of his ignorance, and there was only the interpreter to whom we could speak. We went back to the car and bumped our way home to the camp, very thoroughly defeated.

It is not a good idea to go hunting for spies in Macedonia unless you have a number of special qualifications, chief of which are an intimate knowledge of the dialects of the district, and some experience of the ways of the Eastern mind. Without these you will only meet with silence before which you are helpless. You may have your man under your hand, as we had on this occasion, but still he will escape, for to make an arrest without any shred of evidence is mere foolishness and leads to unpleasant letters from the authorities. In this case, as it happened,

---

## IN SALONICA WITH OUR ARMY

---

the escape of the malefactor was only for a little while. A week later our good, friendly shepherd was brought in by another party which included a man who really knew the country, and he was sent down to Salonica to render account of himself. What happened to him I do not know, nor did any of us inquire. The subject was one which we avoided for a long time. And though we sought diligently for our interpreter, we did not see him again. He had disappeared, going perhaps to some other part of the front to protest his devotion to M. Venezelos, and his enthusiasm for the cause of the Allied arms, confident in his security from detection, and not a little contemptuous of those whom he professed to serve.

One feels that contempt everywhere in the country. The people are accustomed to war. Throughout the years they have been subject to quick alarms; sudden and violent death is a thing which they understand thoroughly. They have seen the light of burning homes and crops; they have mourned, and they

---

## CONCERNING SPIES

---

have rejoiced. And to them we seem to be strange warriors, foolish and helpless people, without decision or determination.

If when we found that shepherd among his goats one of us had shot him and another had put a bullet through the brain of our interpreter, the people of the land would have appreciated the actions, but our fashion of sending down even known spies to Salonica and affording them a fair trial with full opportunities for friends to lie freely on their behalf—that is not appreciated except as a sign of our amazing madness. The Germans would not be so foolish ; they would shoot at once and not even trouble to ask if they had shot the right man—and that is a policy which commands the respect of the Macedonian. To the minds of these people it appears that a nation which pursues such a course is far stronger and more likely to win.

It is so easy to look back on the early stages of a campaign and to say “ if we had done this and this, our way would have been less difficult,” but the exercise is not often profit-

---

## IN SALONICA WITH OUR ARMY

---

able. It is true that if we had dealt in more drastic fashion with spies in the beginning they would not be such a nuisance to-day, but it does not appear that we could have behaved differently. We have our inbred enthusiasm for a fair trial, and we have gone about the earth forcing the fair trial upon peoples who lack appreciation of justice for so many centuries. It does not seem to matter to us that our actions are regarded as foolishness and weakness ; it is our custom and we intend to carry it out. And the appearance of the map of the world suggests that our foolishness has been profitable in the end. Perhaps, in spite of the open contempt of the villagers of Macedonia our policy will prove to have been profitable with them also. One can only note the fact that it is very hard as yet to see that it has been anything but a hampering nuisance.

## CHAPTER XIV

### OUR FEASTING

**T**HERE was once a most experienced warrior who made a song in praise of the Eternal Goodness. In his song he put a little list of benefits which he had received, the things in his life for which he had been most joyously grateful. In that list there is one line which only a soldier can appreciate fully: "Thou preparest a table before me in the presence of mine enemies. . . . My cup runneth over."

For such a table as one usually finds in the presence of the enemy is a rudimentary affair. There is food and there is drink, and one can say little more about it. It is, of course, adapted to that business of sustaining life and renewing energy which is the primary purpose of all food, but it leaves out of

---

## IN SALONICA WITH OUR ARMY

---

account that other business of refreshing the whole being by a little space of delight and enjoyment. That does not enter into the programme. When you sit down by the roadside or in a hasty trench to excavate the contents of a tin of bully beef with a clasp knife and your fingers, chewing meanwhile at those obdurate biscuits whose only virtue is that they are handy to carry about—when you do these things, you know that you are being nourished, and you do not expect anything else. So, too, when you take a mouthful of luke-warm, chlorinated water from your bottle, you know that your thirst is being slaked and that in consequence you will be able to endure for a little while longer. Perhaps if your temperament were unusually ascetic you would be glad to have a life so shorn of accessories and to have robbed the body of one of its pleasures, but the army as a whole is not made up of ascetics. It is made up of a jolly, full-blooded people who have learnt through hardship and privation to appreciate the good things of life, to desire

---

## OUR FEASTING

---

them and to enjoy them to the full whenever they have an opportunity. This being the case, most of us would be glad to subscribe to the limit of our ability towards a testimonial to the man who is responsible for the Expeditionary Force Canteens. That man, whoever he may be, is the chief benefactor of our armies in the field, and especially of our armies in Macedonia.

No praise can be too high for the work of the department of the Quartermaster-General. Quite apart from the huge business of equipment, that department has to feed our millions on all the fronts day after day, and the task is admirably accomplished. To every man there comes each day the food required to keep him fit for his work. It comes in generous measure, and in really wonderful variety, considering the difficulties of the business. But the variety cannot be great enough to satisfy the very human craving for an occasional change, for sharp flavours, and for sweetness. With jam and with onions the authorities do their best for our

---

## IN SALONICA WITH OUR ARMY

---

palates, and their achievements are really wonderful, but they do not reach to the end of healthy desire. Filling the gap there comes the work of the Expeditionary Force Canteens, those glorified tuck-shops of the army.

Here and there in Macedonia there stand great marquees with signboards bearing the words of cheer, "Expeditionary Force Canteen." There are not many of them. There is, of course, a big headquarter place in Salonica. There is one at Hortiack, and another, I believe, at Stavros. At the forty-fifth kilo on the Seres road there is a kind of branch establishment, and there is one at Janes. When we reached that place and found that it possessed a canteen, we began to remember the things which we really liked, and mess presidents became suddenly busy collecting money.

Messing is always done by companies in Macedonia. Battalions are so often split up and their parts separated that it would not be possible to run one mess for all the

---

## OUR FEASTING

---

officers of the battalion. The officers of each company club together, and the unluckiest is appointed mess president. His duty it is to buy anything which he can find to buy, to reason with the cook, to make the meals as delectable as possible, and to endure all day long the reproaches of the little family whose housekeeper he is. Also he has to collect from his family such sums as will pay for the various articles which he has purchased; he has to learn to give soft answers and to prepare balance-sheets, and to possess his soul in patience when somebody says that he has no money and that he will have to wait till the field cashier comes round.

For of course cheque books are useless in that uncivilized land. No one appreciates the documents, and no one ever thinks of writing them. Money is obtained from the field cashier, a benevolent gentleman who pays periodical visits to the different units, with bags and boxes full of the paper money of Greece. In exchange for a little writing on a scrap of paper he presents you with

---

## IN SALONICA WITH OUR ARMY

---

notes which you carry patiently round the country till the mess president finds an E.F.C., or your servant decides that he would like his wages. Macedonia would break the heart of a spendthrift millionaire. Try as he might he would not be able to find any way of getting rid of his money. You cannot spend in a country in which there is nothing to buy, and in consequence funds are always plentiful on those rare, delightful occasions when it is discovered that there is a canteen in the neighbourhood of the camp.

I brought away with me the price list which I obtained when I went to that canteen at Janes. It is a big, imposing sheet, and it contains the names and prices of over three hundred articles, any one of which the man on active service would dearly love to possess, though he would find it difficult to carry some of them about with him. There are belts and biscuits and butter, cheese, chutney and corkscrews, figs, footballs and fly-papers. Handkerchiefs, honey and haddocks, laces, lard and lentils, sauce, sausages and soap—

---

## OUR FEASTING

---

all these and many, many more delectable things are offered. To glance through that list in a crowded marquee in the heart of Macedonia is to gain a feeling of having come home all at once, with the freedom of the Army and Navy Stores and Selfridge's and Harrods. That feeling only wears off a little when you proceed to work through the ten-deep crowd before the counter, and find out what you can really buy.

For of course at an up-country place you could not expect to find all the three hundred-odd articles in stock at the same time. Transport is too great a problem, and the demand is too fierce. The Janes canteen is the centre of the hopes of all the units which work on the Doiran front. Day by day officers and men and limbers come cantering in from the hills which hide the firing line, with long lists of goods required and with bundles of notes in their pockets. No sooner is the canteen stocked than it is emptied again. Packing cases dance through it, hardly pausing on their way, and go rollicking off to cheer the

---

## IN SALONICA WITH OUR ARMY

---

inhabitants of the dug-outs over there where the Bulgar shells are bursting. And in addition to the people in the firing line there are all the units which are scattered about the country, making roads or doing other necessary work within a ten-mile radius. Every one wants everything he can get, and the job of the canteen manager is not an enviable one.

We did our shopping magnificently in that marquee. The great advantage of the active service life is that it abolishes fads. The man who protested in peace time that if he ate pine-apple he came out in pink spots all over quite forgets his affliction when he has not tasted fruit of any kind for three weeks. You can buy what you like within reason and be sure that it will be appreciated. Only once did the canteen disappoint us, and that was when it sold us some tins of horrible little sausages, of the thickness and general consistency of a lead pencil. For the rest the things were good and more than good, and the mules objected sincerely to the load which we packed into the limber to take

---

## OUR FEASTING

---

away with us, for all the officers' messes of the battalion and the sergeants' mess and the regimental canteen had representatives with that expedition, and after we had finished in the dry goods department we went round to another marquee where cases with fascinating inscriptions were stacked, and proceeded to buy alcoholic beverages.

For the rest of that week the various messes were busy giving vainglorious dinners, and ransacking the battalion and the neighbourhood for guests. Any excuse is good enough for a festivity in such a country, and it is something to have an unfamiliar face at the table when you have been feeding with the same four or five men at every meal of every day for weeks on end. Those were the days when the mess cooks of the companies entered into fierce competitions and pestered the mess presidents with suggestions every morning. They were days when we professed to grow weary of asparagus and began to criticize lobster and to be fussy over brands of condensed milk. Also we com-

---

## IN SALONICA WITH OUR ARMY

---

pared brands of stout and whisky and quarrelled over the merits of various liqueurs—we who, a week before, had been thankful enough for a pint of Macedonian beer wherewith to wash down our rations.

One never knows how things will appear to other people. I am wondering now if all this will seem very greedy and gluttonous, as though we were only concerned to eat and to drink and had no appreciation of the grim nature of the business to which we were sworn. There may be some who will think of us like that, some stern souls on whose breakfast table there are porridge and kippers and bacon every morning and who always eat mutton because they dislike beef. But it does not occur to me that we need any defence for rejoicing in all those nice things, for getting a great deal of real, keen pleasure out of them, and for thanking our lucky stars that we had come to a place where such things were to be obtained.

A table prepared in the presence of our enemies—a cup running over.

## CHAPTER XV

### MOSQUITOES AND MALARIA

**T**HERE are few things more irritating than to sit down before a good meal, and to realize with sudden, painful clearness that you cannot eat anything at all, that you must crawl away to your bivouac and lie there very unhappily for the next four or five hours, unable to smoke or to read or to take any real interest in anything. To that annoying fate malaria condemns its victims, over and over again.

I have already explained that when our men were sent to Salonica they were committed to a war against nature, a war against rock and swamp and wilderness, a war against hill and valley, a war against storm and sun. At the same time they were committed to a war against the mosquito and all its works,

---

## IN SALONICA WITH OUR ARMY

---

chief of which is the spreading of that detestable fever. There are wide spaces in that land where every battalion which occupies the ground is certain to be decimated. You could not be more positively sure of reducing its fighting strength if you were to put it in the most perilous part of the line in one of the big offensives in France. Every battalion which goes into the Struma valley through the summer months knows quite well that it will be losing men day after day, week after week while it remains there, and for long enough after it may be returned to the hills. The same is true of the valleys of the Galika and the Vardar, and of the low land round by Lake Langaza.

Of course precautions are taken. The quinine parade is a standing order in the Salonica armies. Every day the companies are lined up and marched off to the doctor's headquarters. There the men pass in single file, and receive each of them five grains of quinine, with a drink of water to wash it down. How much quinine they consume

---

## MOSQUITOES AND MALARIA

---

in the course of a year I should not like to say, for all are served alike. Some of them are very sorrowful about it at first, but in the end it becomes as much a matter of course as the cleaning of the rifle.

Then, too, mosquito netting is issued to the units stationed in dangerous areas, and the camps are constantly inspected by medical dignitaries who refuse to be contented till they are sure that all the men know how to close up their bivouacs with it. Supervision of the mosquito defences is not the least of one's little worries, and it adds seriously to the burden of the medical officer's life. But in spite of these precautions, malaria continues to claim its victims. The quinine parade does not fortify them against it, nor do the nets protect them. Day by day fresh cases are reported. Day by day the ambulances are taking men off to hospital, while company commanders mourn over their parade states.

The criminal responsible for all this is a mosquito which always hangs its head with

---

## IN SALONICA WITH OUR ARMY

---

a dejected and crime-laden air when it sits down. Mosquitoes which are not engaged in distributing malaria rest quite differently, with their bodies either parallel to the surface to which they are clinging, or so inclined that the head is higher than the tail. But when you find one whose tail is in the air while its head is tucked down, you may know that it is a poison-bearer and an insect to be avoided. If one of those mosquitoes has bitten you the next fortnight or so will prove whether or not malaria has power to touch you.

The amount of trouble those insects give is the proof of the respect with which the Army regards them. The dangerous areas are, of course, the lowlands near water. For this reason the camps are always pitched on the highest possible ground. This may and usually does mean that you are a mile and more from the water supply, but that does not matter in the least. At one time we were very busy along the Galika valley by Karadza Kadi, and every night we climbed to roost high on the hills to the east, and

---

## MOSQUITOES AND MALARIA

---

water had to be carried nearly two miles to the camp. It was a great nuisance, but it was quite unavoidable. It is dangerous even to walk into the valley after sunset, for one would certainly be bitten, and a mosquito bite can be quite as disastrous as a bullet wound. So it was that at sunset we left the low ground to the undisturbed possession of the natives and retired up the rocky steps to our camp among the scrub, but even so we were not altogether safe. A few of those industrious poison-distributors usually followed us, and the medical officer was in danger of wearing himself out over the supervision of mosquito nets, while the nervous people doubled their dose of quinine and took ten grains daily.

The soldier's business is, of course, a double one. He has to do all possible damage to the enemy, and he has to keep from being damaged unnecessarily himself. It is quite an important part of his work to take care of himself and to preserve himself in good condition for the hour when he may be called

---

## IN SALONICA WITH OUR ARMY

---

upon to go forward into danger and fight. If he fails to take care of himself he is not a good soldier ; if he seeks to disable himself he will certainly be court-martialled, and ought to be shot. All these statements are the most elementary maxims of military life, and they are brought to the notice of the soldier very early in his training, and are impressed upon him time after time through the duration of his service.

And they are realized quite clearly. The average soldier knows well enough that he has no right to expose himself uselessly, that he would be doing wrong, for example, if he were to put up his hand above the parapet of the trench in the hope that a stray bullet might give him a trifling wound that would get him a holiday in hospital. But a man may understand this and yet fail to grasp the fact that it is quite as criminal an act to expose himself to the risk of a mosquito bite. It is such a silly thing after all. In the morning there is the red, itching lump on hand or arm or face, but it does not seem

---

## MOSQUITOES AND MALARIA

---

important, and it is not easy to grasp the fact that that itching lump may be a far more serious wound than many a bullet hole. For that reason it is not easy to impress on the men the urgent need for protecting themselves against this particular enemy.

The amount of mosquito net that is issued is not always adequate. If it is to afford any-protection, it must be most carefully arranged, and sometimes it seems altogether too much trouble to make the arrangements. Moreover, summer nights in Macedonia can be terribly oppressive at times, and sleepers are liable to be restless, to toss and turn and destroy their defences. Through carelessness, through accident, and at times through sheer necessity the way is opened, and the mosquito is given its opportunity.

There are, of course, very many who go unharmed through it all. For some reason which the doctors may understand, they are immune, and the poison does not touch them. They are on parade every day cheerful and undisturbed. But there are the others who

---

## IN SALONICA WITH OUR ARMY

---

are taught swiftly and most uncomfortably the full meaning of the mosquito bite which seemed so small a thing when it was inflicted.

One can never tell where the next victim will be found. After a fortnight in a malarial district there is a touch of excitement to enliven every morning. When the company or the battalion falls in on parade there is always the question—who is missing? It may be an invaluable platoon sergeant, it may be the battalion nuisance. The fever does not respect strength, and very often it leaves weakness unharmed. But almost certainly there will be a vacant place somewhere or other, and some one will be shivering dismally under piled blankets, or gasping for breath and dreaming of cool drinks, and absorbing large doses of quinine.

Sometimes a man will have so severe an attack that there will be nothing for it but to pack him off to hospital at once. On the other hand there are many cases when after two or three days the victim will be back at work, thinking that the trouble has passed

---

## MOSQUITOES AND MALARIA

---

away, and that he will not have to fall out of his place in the ranks. There are some men, especially among those who have suffered from the fever before in other countries who are able to carry on. I knew one major who was helpless for two or three days out of every month, but did contrive to remain with his battalion and to get through his work. And there are others who are forced into hospital every now and then, but find their way back every time. Others again fight against the trouble for weeks but are at the last driven out of the country by it, to finish their soldiering in other lands.

Fighting malaria is not an amusement that can be recommended. The tricks of it are so numerous. Sometimes an attack will come on with due warning which gives time for steps to be taken to reduce the fury of it, and at other times the onslaught will be so sudden that it has developed into an undeniable fact in two minutes. It is quite possible to sit down to a meal feeling perfectly well, and even to get through one

---

## IN SALONICA WITH OUR ARMY

---

course, and then to be compelled to leave the rest and go away to put up as well as may be with the discomfort of the following hours.

And of course that leads in time to weakness which becomes more and more pronounced. Very many of our men in Macedonia have rebelled so sturdily against the idea of giving in that they have struggled on, week after week. They have refused to attend the sick parade or to confess that there was anything the matter with them until at last their weakness has betrayed them, and their trouble has been discovered simply because it was not possible for them to work or to march any more. They had realized that ideal to which only the best soldiers can ever attain. They had gone on while their limbs would carry them, disdaining to yield while strength remained to set one foot before the other. And there is something that hangs between the comic and the utterly pathetic in their disgust when they find that it is indeed the end of endeavour for them for the time.

---

## MOSQUITOES AND MALARIA

---

Doubtless those who are in authority over us know what malaria has cost our armies in Macedonia. Whether or not they realized what that cost would be when the adventure was planned is another of those questions which may possibly be answered in the future. For the present it is enough to say that it must be taken into account in any consideration of the work and achievements of the forces which were sent to that uncomfortable land. It must be remembered as scrupulously as must the nature of the country and all that difficulty of transport of which I have written. It is another of the big troubles with which General Sarrail and his subordinate commanders have had to contend, and it is not possible to do justice to any commander unless you make full allowance for his difficulties, and the critics who sit so easily at home and write of what should have been accomplished in Macedonia must, in common honesty, give due consideration to all the conditions which have surrounded the work of the forces sent to Salonica.

---

## IN SALONICA WITH OUR ARMY

---

And a sick soldier is something more than a man absent from his place. He is so definitely and defiantly a nuisance. He is a person who must be tended and cared for. There must be people to look after him, ambulances to carry him about, lorries to bring up the special things which he requires. Multiply him by a few thousands, and you must have an elaborate, well-staffed organization at work, doing all kinds of secondary jobs which would not be there to be done if there were no sickness. With one hand the fever has withdrawn men from their work by thousands; with the other it has forced on the commanders the necessity of maintaining in the country a large number of non-combatants. Any increase in the number of its non-combatant members weakens an army, and more especially in such a country as this where it is so difficult a matter to bring up the necessary supplies.

That is a point which is frequently overlooked, and yet it is of the highest importance. Before you go to war in any country it is

---

## MOSQUITOES AND MALARIA

---

essential to know what amount of manpower will be absorbed in taking care of the fighters, and especially if it is difficult country to which all supplies must be carried a long distance by sea. For as the difficulty of the country increases, so will the number of men employed on transport work increase, and food must be brought for each of these as well as for the men who do the actual fighting. And if in addition it is a country where much sickness is to be expected, the number of essential non-combatants will be greater than ever. The best army, from the point of view of a commander, is one in which a hundred per cent. of its members are fighters. The lower the percentage of fighters, the more difficult it becomes to win battles, or, indeed, to go into battle at all. And all those heroic, necessary people who belong to the medical service of the Salonica forces are a source of weakness to those forces, even while it is true that without them no military operations would be possible in the land.

## CHAPTER XVI

### THESE ARE THE HEROES

**T**HE whole body of the facts and figures concerning the hospital organization in Macedonia is in the keeping of the authorities, and there it must remain till the time when the war shall have become no more than a memory and all the truth of the world's effort may be told. In those coming days we shall learn, perhaps, the number of the people who were engaged in that service, the number of the marquees and ambulances which were kept so constantly busy, and the cost of that great work of caring for the sick and wounded. Certain it is that no ordinary member of the Salonica expeditionary force could even guess at the extent of the labour or the magnitude of the means which had to be employed to deal with the task.

---

## THESE ARE THE HEROES

---

We who belonged to the fighting units could only know that wherever we went the Geneva cross was never very far away. Ever and again as we marched through the land we would find it flying over some compact little camp in a fold of the hills. On all the roads there were the ambulances hurrying to and fro. On that railway which runs from Salonica to Janes and beyond there is the hospital train carrying down its load to the sea every day, and in Salonica Bay the green and white hospital ships are coming and going all the time. In Macedonia you may be far from newspapers, from tobacco which a reasonable being can smoke, from the more pleasing varieties of food and from all the minor comforts of life, but you are never very far from some kind of a hospital.

The broad lines of the organization are roughly these. The medical firing line is, of course, held by the medical officers of the battalions, who have their orderlies and stretcher-bearers to assist them. The medical officer has his Aid Post in the camp, where

---

## IN SALONICA WITH OUR ARMY

---

he can attend to the sick, where his drugs and implements are stored, where he can remove offending teeth, administer quinine or that terror of the Army which is known as Number Nine, and take the temperature of the latest victim of malaria. Frequently he has also an ambulance drawn by horses or mules which accompanies the unit on its travels, but of course this has to be left behind when the nature of the country makes wheeled transport impossible and all the luggage and supplies have to be carried on pack mules. On these occasions the fate of the individual who is taken ill on the march is unhappy. If he collapses by the wayside there is nothing to carry him, except the stretchers, and it is necessary to make him understand quite clearly that at all cost he must drag himself along to the end of the day's journey.

In the second line come the field ambulances. They are mobile, and it is their business to go with troops on the move, to pick up as many of the casualties as the battalions cannot keep with them, and to

---

## THESE ARE THE HEROES

---

hand them on in due season. The ordinary field ambulance consists of a few ambulance wagons and a small camp. If the unit to which it is attached is moving through difficult country with pack transport, the ambulance generally looks for an easy way round, so that at the end of the day or at some time during the next day it may be ready to take over any men who have fallen ill. The soldier who is hurt or attacked by fever or dysentery is treated first at the Aid Post of his own unit. If his condition does not improve and he is unable to journey on with the rest, he is handed over to the field ambulance where he may be treated again for a little while if his illness is only slight. If he does not get better, or if the ambulance becomes unduly crowded, he is passed on to the third line.

This is composed of the casualty clearing stations. They are permanent camps established at the most advanced position possible. Thus there is one at Stavros and another at Lahana and a third at Janes. They are

---

## IN SALONICA WITH OUR ARMY

---

really miniature hospitals, and to be sent into one of them is to experience the unimaginable luxury of sleeping once more between sheets and on a real bed. The sufferer may remain in one of these stations for a long time, if he is considered too ill to make the journey to a hospital, or if it is thought that he will very soon be well again. Behind the casualty clearing stations, and especially on the Seres road, there are occasional small field hospitals which receive and keep for a little while those who are not well enough to make the whole journey back to the base, or who are only slightly ill and may be expected to recover within a week or so. Tucked away out of sight near these little hospitals you will always find a graveyard, a little space of ground very carefully fenced and cleared, with the neat, sad mounds in precise order, and the little white crosses with their brief inscriptions, bearing witness that some have not lived long enough even to die within sight of the sea. That always seems the hardest, cruellest part of war, that

---

## THESE ARE THE HEROES

---

finding of death in the safe places behind the lines. There is nothing unseemly in the death that is found in the course of ordinary duty ; that is all in the contract and it is not a very grievous thing. But it is hard that when a man has lived long enough to find safety with his face turned homeward death should overtake him. There is indeed a crescendo of sadness, and if those graves behind the lines are pitiful, still more so are those which have been dug in Malta, that island of hospitals, and most pitiful of all is the death which comes on the hospital ship as the coast of England lifts and rises from the sea.

No one who has played any part, however small, in war would seek to emphasize the sadness of it. That is not our job. If it must be done, it can very well be left to newspaper correspondents and others whose business it is to watch from a distance and comment on the course of things. If I have mentioned these sorrowful, remote graves it is simply because it is necessary to insist that they would be more numerous by far if it

---

## IN SALONICA WITH OUR ARMY

---

were not for the infinite care of the medical service. The day of miracles is not past. If you could go to those hospitals which stand about Salonica, if you could see the battles that are fought day and night through all the hours across the broken bodies of our men, you would understand. If you could work your way down as I have done through field ambulance and clearing station to the base, and lie day after day in one of those long, bright wards, you would know that wonders are still performed upon the earth.

From the moment a man is carried away from his unit he is surrounded by such unceasing tenderness, by such a wealth of devotion and skill. It is bad, of course, for those who find their trouble on the Struma front, and must come back down all the tormenting length of the Seres road, but every possible measure is taken to keep them from pain and suffering, and if they are very weak the journey is broken so that it may be made in easy stages, with rests in between at the little hospitals which stand by the side of the

---

## THESE ARE THE HEROES

---

road. In those hospitals there are lavish care and unflagging attention to cherish and fan the little spark of strength that it may glow through all the body, giving power to endure the next stage of the journey.

No praise can be too high for the men and women who are bound to that service. How they find power and the heart to carry on with their work I do not know, but their zeal is unflagging, and their cheerful kindness goes shining on through all the days and nights. There was one day when I came to Sarigöl, that unhappy village which lies next below Janes. The hospital train had just come into the station on its journey down to Salonica. There were the long carriages, and the vans that had been fitted with cots; one could see the forms of the men as they lay in the comfortable shade, and the orderlies hurrying to and fro. At the door of one of the vans two nurses paused for a moment, looking out. I had not seen an Englishwoman for months, and there was something in the mere sight of them that took one by the throat. They

---

## IN SALONICA WITH OUR ARMY

---

stood there, just a moment, looking out over that alien land. It must have been very familiar to them, the village with its queer, mud-plastered hovels, the tiny church with the great bearded black-robed priest lumbering down towards it, and the parched plain rolling away to the mountains. They stood there, and one would have said that they were a little weary, weary of the heat and the plague of the flies and the unending labour of their life, and for the moment they were forgetting to smile. There was a call from the shadows inside the van and they turned, both together, and the smiles were back on their faces, not the forced smiles of duty, but shining smiles that told of the kindness burning within.

Of the trains by which a man journeys in the course of his life there are a few, here and there, which he remembers with gratitude and joy. We have all of us our memories of the happy trains, which carried us so pleasantly to gladness, and not the least of mine is that hospital train which runs from

---

## THESE ARE THE HEROES

---

Janes to Salonica. For there came the day when in my turn I was put on that train with blankets and pillows to comfort me, with pleasant food and drink to hearten me, and with liberty to lie quite still and watch Macedonia, that admirable country, sliding past as I journeyed so smoothly down to the sea. The nurses were busy in another part of the train, but there were the soft-stepping orderlies, quick to anticipate every want and desire, and once when we stopped for a quarter of an hour at the station called Salamanli there came a small, delightful music. Before that hour and since I have cursed gramophones with the heartiest sincerity, but at that time there was nothing but delight, and one did not realize that a machine had anything to do with it but thought only that four entirely admirable people were singing Gilbert and Sullivan quartettes with skill and enthusiasm. In such comfort and serene unhappiness one could have journeyed for days on end, and that train stands to me for a symbol of what has been and is continually being

---

## IN SALONICA WITH OUR ARMY

---

done for our men when sickness or wounds cry halt to their campaigning. All that can be bought for their healing is purchased and brought from the ends of the earth, and with it there comes a devotion which could never be bought, for which no money that was ever coined could pay. Some of those orderlies of the Royal Army Medical Corps are heroes of the most dogged and determined order. It is not for them to do one flaming deed in the full tide of battle and thus to win splendour for their names. It is their part to go on day after day doing unpleasant things with cheerful readiness—day after day. And with them there are the doctors who have left their easy homes, and the nurses who have come from all the lands to play their part, to bear their portion of the burden.

As on that excellent train, so in the hospitals round Salonica they are doing their work with the same unflinching devotion. The staffs of our hospitals everywhere deserve all that can be given them of honour and reward, but those who have served in Salonica

---

## THESE ARE THE HEROES

---

deserve even more than the others. It is so unpleasant a town. In Alexandria or Cairo or Malta it is at least possible to escape in leisure hours and to go to cheerful, jolly places and to forget pain for a little while, but I do not know what there can be of pleasant recreation in that town which stands looking away towards Olympus. Life in those hospitals must be a most unmitigated form of exile, with none of the ameliorations of a civilized life to make it tolerable. Our nurses there have known what it is to be spat upon in those filthy streets, and there is nothing in the streets to make them worth visiting. It is just a matter of work and sleep, with a considerable chance of sickness thrown in for the sake of variety. Sometimes they will tell you of friends across in Alexandria, and of the letters they write telling of the good time they are having. For my own part I do not love Alexandria at all, but I know that there are shop windows with interesting things to examine, that there are wide, sunswept streets, and English people

---

## IN SALONICA WITH OUR ARMY

---

passing to and fro, and women in pretty frocks, and a most admirable place for tea near to the top of Rue Cherif Pacha, on the left-hand side. And anyhow one would rather be anywhere on earth than in Salonica.

But they do not complain, those brave, kind women—they work their miracles instead. You may lie in your place day after day and watch how they bring men back from the very gates of death. It is a fine thing to see, that relentless struggle for a life. You may have enough knowledge to appreciate it, to know how small are the chances of recovery, how it must all depend on care, science having done all in its power. And you note every morning a little improvement, a little accession of strength. There is a touch of healthier colour in the poor, worn face, a little light of interest in the eyes ; presently there is movement and reasonable speech, and the dark shadow passes away. By the time they are making ready to take him to the hospital ship, you know with exact and definite knowledge that only unfailing service

---

## THESE ARE THE HEROES

---

has prevented the erection of another of those little crosses which mark the resting places of the men who could not live long enough to get home.

## CHAPTER XVII

### THE WAY OUT OF THE LAND

**I**N my early days in the country, when we lived for a time on the high plateau by Hortiack, we would sit outside our huts in the evening and watch the shipping in the bay with an interest only to be understood by those who have been in exile. It is some mitigation to be able to look at a ship. It stands for freedom, freedom to go out across the seas of the world and come at last to your own place. One is apt, I suppose, to grow rather sentimental in those distant places. After all it is almost the only luxury.

There would be ships of all nations with strange and violent designs painted along their sides, and there would be the brave dingy tramps which sail so fearlessly under our own flag, longing for a chance to settle

---

## THE WAY OUT OF THE LAND

---

a submarine. War boats of every kind would be there, and transports moving up from the sea with their burden of troops. And most beautiful of all the hospital ships, painted green and white with the great red crosses promising to all who sailed on them a space of rest and peace, a refuge prepared from all the weariness and tumult of war.

It will not, perhaps, be hard to understand why we looked at those green and white ships with an intense, peculiar affection. Holidays have no great place in the scheme of things in Macedonia. The men in France have their leave to look forward to. They know that every few months they will get their days of release. They will be able to cross to England, to be with their own people, to walk the streets of their towns and be in the keeping of their homes. But there is no such prospect in front of the man who lands at Salonica. Very, very rarely it happens that a man who has been in that country for a year is miraculously presented with permission to spend a fortnight at home, but

---

## IN SALONICA WITH OUR ARMY

---

those instances are so scarce as to be negligible. Once you get to Salonica you have every chance of staying there for the duration of the war unless the authorities should decide in some moment of wisdom that the expedition is unprofitable and that our armies would be more useful elsewhere. That being the case we should have been more than human if we had not realized that those hospital ships offered our only chance of a holiday, our only hope of finding our way home.

I can see that I shall have to write this rather carefully or some petulant pacifist or one of the other enemies of our nation will be twisting my words to mean that our men in Macedonia are discontented and mutinous and seeking every opportunity to escape. That, of course, would be the most damnable libel on a gallant and devoted body of men that could ever be devised by the most lying and malignant Hun. There is the widest possible difference between realizing that a thing is desirable and setting to work to obtain it. We had come to the country to

---

## THE WAY OUT OF THE LAND

---

do something, and the fact that that something had turned out to be monotonous and entirely unlike our dream of war was irritating, but it had to be done and we meant to do it. At the same time it was only natural that we should realize that it would be a happy thing to journey down to the sea on one of those pretty ships, and that, whatever their sufferings, those who made that journey were enviable people.

That after all is the great consolation of the soldier in a vast citizen army such as this which the British Empire has created in the hour of its necessity. It is rather different with the born soldier, the man who loves fighting for its own sake, the man who would have been in the army in any event and was probably serving before the war broke out. He is the spiritual descendant of those old adventurers who in the distant past left their own land when it was at peace and went to serve in the armies of other nations in a life-long quest of conflict. Such a man is liable to fume and fret when for a

---

## IN SALONICA WITH OUR ARMY

---

time he is laid aside. There are no ties of home to bind him. There are no distant voices calling to him. One land is as good as another, one face as fair as another and the camp is his chosen habitation. But such as he do not at any time form the bulk of a nation, especially of such a nation as our own where the fighting has for so long been in the hands of professionals and the born adventurers go naturally to the sea. Our armies must inevitably contain a large percentage of men who cannot know real happiness and content away from their homes. Always they must hear the little whispering of remembered voices ; before their eyes there must always be the vision of some little house in which, for them, all the excellence and beauty of living are contained.

For these men there is a comfort to sustain them through all the pain of wounds and sickness. In the hour of darkness and dereliction there is light. How often has the story been told of our lads in France when, with their bodies shattered by great wounds,

---

## THE WAY OUT OF THE LAND

---

a smile has come to wipe the pain from their faces and they have controlled their quivering lips to whisper, "Me for Blighty." And if that consolation is effectual in France, can you not realize how far more effectual it must be on the distant battlefields where the man had no hope of seeing his home while the war endured and even, it might be, for many months after peace returned to the earth? If you think of our men of the Territorials and the New Armies who have been in India, in Egypt, Mesopotamia and Macedonia since a few months after the war began, can you wonder that they think longingly of the hospital ships?

That is not wonderful at all. The thing which is wonderful is that, in spite of the longing, there should be such consistent and sustained efforts to avoid making that desired journey. It is and will remain wonderful that our men who are sick or wounded in those far lands should so often insist that there is nothing the matter with them and that they are perfectly well able to carry on.

---

## IN SALONICA WITH OUR ARMY

---

I remember one man, a grey-headed fellow of forty. He had been telling me of trouble in his home, of sickness and the failing health of his wife. His heart was torn with anxiety and he was in a mood to curse Macedonia, and the day that led him to the recruiting office. A week later I saw there was something wrong with him. By all the signs malaria had laid hold of him, but he stood up before me, shaken as he was with the fever, and lied to me, declaring that he was perfectly well, and it was a fortnight before weakness conquered him and he had to be taken away. And he was only one of many, of very, very many. Over and over again you may see it, out there on the far fringes of the war. I have seen it in Egypt, down on the edge of the eternal sand, I have seen it in hospitals in Alexandria, and across the length and breadth of Macedonia. "I'm all right," the story runs. "Why don't they send me back?" "See you again in a week, boys," said one of our men as they carried him away to the Field Ambulance, and we heard later that he died a

---

## THE WAY OUT OF THE LAND

---

week after the hospital ship brought him to England.

But I began this chapter with the intention of telling of the way out of Macedonia, the way of the green and white ships over which so many thousands have passed, not through any skill of the enemy but simply by reason of the malice of the land. It might be as well to carry out that original intention.

We who sat on that plateau under the shadow of Kotos used to watch the hospital ships and to make small jokes among ourselves as to when our turns for the journey would come, and what the trouble would be that would carry us out of the land. We went down to the plains and the characteristic troubles of the country began to pick and choose among us, selecting their victims with fantastic uncertainty, and those poor little jests were carried on. "Hullo, booked your passage on a green and white?" would be the question put to any one who turned up in the morning with a strikingly yellow complexion. "Give my regards to Leicester

---

## IN SALONICA WITH OUR ARMY

---

Square," would be the last words called after the ambulance as it trotted away, carrying some one who protested with violence that he was perfectly well. To one after another the summons came, and at last it was my turn and I was carried, very much surprised but very comfortable, down to a hospital on the edge of the sea.

The things which happen to the soldier who reaches one of those admirable hospitals which stand about Salonica depend altogether on the extent and nature of his trouble. Some, of course, get better in two or three weeks. They have that space of rest, of the luxury of sleeping in proper beds and of unusual food, and then they go quite cheerily back to their units. Others improve a little but not so much as might be desired, and one day a very senior medical officer comes round and declares that they must be sent to Malta. Others again are obviously so ill or so badly wounded that they will never be able to serve in Macedonia again, but they, too, are sent to Malta, for it is not the

---

## THE WAY OUT OF THE LAND

---

custom now to send people straight home to England from Salonica. Every one goes first to that island which has been turned into a tremendous hospital, where under the old shadow of the Knights of St. John the work of healing is carried out on a scale more spacious than anything of which they in their time could dream.

So there is every now and then in those hospitals a jolly day of packing and preparation. There are men who have had to lie without moving for weeks, and there are smiles on their faces while the orderlies run to and fro and baggage reappears from the stores in which it has been locked away. Others are stumbling about on crutches, and others again walk proudly if a little unsteadily up and down, saying good-bye to their companions of a little while, and collecting messages from nurses to be given to nurses in Malta. The motor ambulances are at the door and presently they roll away down the long road which leads to the quay where the green and white tender is waiting. Out

---

## IN SALONICA WITH OUR ARMY

---

in the bay the ship is ready to receive its happy passengers, and all day long the stream of feeble but smiling people is passing over the gangways.

There is one view of all these towns of exile which is fit to take its place among the loveliest views in the world—the view over the stern as the departing ship bears one away. That view of Alexandria convinced me of the splendour of the sweltering town, that view of Salonica left with me a vision of enduring loveliness. Later on that view of Valletta was to leave with me a memory of sunlit beautiful age, enduring still to serve the generations.

Salonica from the sea has a power and glory of its own. One is away from the detestable streets and the utterly alien people. It is no longer possible to be afflicted by the abominable smells or deafened by the crash and clatter of iron tyres across the primitive paving of the road. It lies, pierced by the tall fingers of the minarets, with trees breaking the monotony of the tall buildings, with

---

## THE WAY OUT OF THE LAND

---

the hills rising very nobly behind it and with the excellent beauty of Kotos standing as a banner to the east. All the unpleasant things are forgotten, and as the picture fades into the majesty of the mountains one can even think of it kindly. And to be able to think kindly of Salonica is a great miracle. Presently there is the glory of Olympus in the west and there comes a little rise and lift beneath the feet as the ship begins to feel the power of the open sea.

Those were the days before the *Britannic* and the *Braemar Castle* were sunk, before the Hun had declared to an outraged world his determination to sink hospital ships. In those days one of the green and white boats was a kind of Ark, a place of refuge where one escaped for a time from all the circumstances of war. When we went on board our revolvers and ammunition were taken from us. What became of the ammunition I do not know. It may have been sent ashore, or it may have been dropped over the side. The revolvers were locked away and we did not

---

## IN SALONICA WITH OUR ARMY

---

see them again until we reached the journey's end. The Hun tales of the abuse of hospital ships are on the same level as the rest of the lies of that mendacious race. There has never been anything of the kind ; we have played the game all through.

We went out upon the sea and the night came down and received us, and we thought of other nights when the transports went stealthily through the darkness. Through all the hours men would be standing with loaded rifles ready to act on the first sign of danger. There would be the closed and blinded portholes and the stifling air of the cabins that killed the power of sleep and drove us in desperation on to the dark and silent decks. There we would stand, peering out into the dark of perilous night, searching for the ghostly form of the little destroyer that tried the way before us.

All that was past. We went now splendid with innumerable lights, green and white still through the darkness. Through the wide-open ports there came the delicate air

---

## THE WAY OUT OF THE LAND

---

of the night to cleanse and refresh our unhappy bodies and bring them comfort. Those gleaming lights proclaimed to all who might pass the fact that we were apart from the main occupation of the peoples of the earth, that from the heart of the conflict we had come to the place of peace. In those wide, air-swept wards we slept as those may sleep whose travail is accomplished, whose strife is at an end.

It was on our second evening that the contrast between our lot and the lot of all others who went out on the waters upon their lawful occasions was most violently brought home to us. Far away as darkness fell a light became visible. When we went on deck after dinner it was flaming high, and we crowded to the rail staring at it with wondering eyes. Presently we gathered that it was a sort of a signal light—I have forgotten its official name—a thing which would float on the water and burn for many hours. It was certain that in the neighbourhood there would be people in boats, awaiting deliverance.

---

## IN SALONICA WITH OUR ARMY

---

There was, as it turned out, only one boat. The story was quite on the usual lines. A tramp steamer was working up to Salonica when the submarine found it and fired the torpedo without warning. The skipper had remained by his ship to the last in the boat which was found, while the rest of the crew had been picked up an hour after the torpedo did its work.

We swung up through the night, slowed and stopped, and there, far below us was the little boat, dancing on the easy waves while our lights fell across the pale, upturned faces. A ladder slipped down our side, and the little figures were clambering up. Last of all came the skipper, hugging all sorts of possessions under his arms, and the little boat slipped past us and away into the darkness as our engines awoke once more, for a hospital ship may perform no act of salvage, not even so much as the hoisting of a little boat out of the sea. It was left, to be a waif and a stray upon the waters—that thing which men had made so carefully, with such pride and skill

---

## THE WAY OUT OF THE LAND

---

of craftsmanship. Far below the fishes were steering to and fro above the steamer.

And above something more than the steamer. The captain was a stolid, red-faced man who spoke very little and very rarely; but once to a few of us he broke his silence. "I wouldn't have cared only they got my chief engineer," he said. "We'd been together the best part of twenty years. He was asleep in his bunk when they came along. Killed him like a dog. No warning, no chance to send him a word. The bloody swine—the bloody swine." It may be that in years to come we shall be exhorted not to hate the Germans any more, but you will never tear that hatred out of the hearts of the men who go down to the sea in ships and have seen the foul treachery of the Hun upon the deep waters.

But we at least journeyed in safety and came in due season to Malta, which has become a sort of Bournemouth to Macedonia. Green and white ships are passing in and out of the complicated harbour of Valletta all the time,

---

## IN SALONICA WITH OUR ARMY

---

bringing the invalids to be cured. In that harbour we saw one or two interesting things which must not be described, and several others which have been described to death already, and when at last we were safely on land again we found that Lord Methuen, who is Governor of the island in these days, had come to meet us. Also he had come to inform us that a new War Office order had come out stating that moustaches need not be worn any more. We were properly grateful. It is not often that you have a Field Marshal to give you directions about shaving.

Malta is a pleasing island, but I did not set out to write a book about it, and it only comes in now as a suburb of Salonica, so I need say nothing of the interesting and curious things we saw there, neither of the goats, nor of the curious hats of the native ladies, nor of those portable farms which you can pick up and carry away in a cart. The progress of the soldier who arrives at Valletta from Macedonia is that he goes first of all to a hospital and remains there till he is con-

---

## THE WAY OUT OF THE LAND

---

sidered to be well on the way to recovery. Then he is passed to a convalescent camp where he spends a few jolly weeks of comparative idleness till one fine day he is packed off to an embarkation camp where he is reminded that he is a soldier and that he knows all about forming fours and route marches and the rest. Finally he is put on to a transport—not a green and white this time—and goes back to make some more discoveries about the Seres road.

But a minority do not go back. Somehow or other they cannot contrive to get better. The clear skies, the pleasant breezes and the fine air will not accomplish the cure. The weeks pass and they are still feeble. Their wounds still trouble them, or fever still comes to shake and torment them, and at last the decision is taken. They must go home. It is not for them to remain any longer under the indescribable blue of the Mediterranean sky. It would not be good for them to see Salonica again; their time of service in that unhappy land is over. They are free to

---

## IN SALONICA WITH OUR ARMY

---

dream once more of grey skies above a grey and turbulent sea, of green hills and the depth of the secret woods and of all the dim loveliness of our own land.

So there came a day when a very happy party of us went once more to Valletta and found a hospital ship waiting for us, a ship which went in time threading the maze of the harbour, bearing us away across the open sea to a little secret bay where a green and white monster was waiting to receive us. The *Aquitania* is not rushing millionaires from one side of the Atlantic to the other in these days of war. She has something else to do, and her great halls are full of small white beds. Nine shiploads of the sick passed across the gangways from the lesser vessels which serve in the Mediterranean, and then the mighty engines were at work. A little space of days and nights and we were riding the Atlantic swell that swings through the gate of Gibraltar. Again a little while and England rose out of the sea to greet and comfort her returning sons.

## CHAPTER XVIII

“WHAT ARE WE DOING IN SALONICA?”

SINCE I returned to England there is one question which I have been asked over and over again—What are we going to do in Salonica? Occasionally the form of it is varied a little and people ask “What are we doing in Salonica?” but the spirit of it is the same. This country is vaguely aware that we have a considerable army at work in Macedonia. It has no idea of the size of that army and it is not my business to say how many divisions are at present scattered over those mountains and valleys. Of course we, the members of the Salonica Force, had a rough idea of our own numbers, but even we could not estimate the whole strength of the Allied armies in the country. We only knew that ever and again reinforcements were

---

## IN SALONICA WITH OUR ARMY

---

arriving, Russians, Italians and French troops in addition to our own, and there was of course the reconstructed Serbian army. To us among the hills came the rumours of transports creeping on tip-toe as it were into Salonica Bay, and from time to time fresh drafts would come out from home bringing altogether unreliable estimates of the movements of the forces. The number of men in the country was no concern of ours, and it was quite rightly kept from us. Our ignorance in that respect was only a part of that other ignorance which was set like a wall about all our living.

For we did not know any better than the people at home what we were doing or what we could expect to do. Through the later months of last summer there came occasional rumours, and still more occasional fragments of authentic news of the activity around Monastir. It seemed that there was really something in the way of a war going on in that area but we were not given any share in it. We were left to our own little play-

---

“ WHAT ARE WE DOING ? ”

---

grounds around Doiran and in the Struma valley, and for the rest we were permitted to make roads, dig trenches, read the papers sent out from home and wonder what the end of it all would be. The papers suggested that we were expected to do great things.

One can only write of those matters of which he has knowledge, unless he happens to be a leader writer discoursing in secure comfort on remote and perilous affairs. I have no knowledge of the Monastir district. I have never seen it, and though the map suggests that it is difficult country, I know that maps on the scale of three miles to the inch do not tell more than half of the truth, and it is always hard to discover which half they tell; it may be better or worse than it looks. I have been told by men who claim to know the area that it is difficult, but I cannot guarantee the extent of their knowledge or their right to describe the nature of country from the military point of view. It is necessary to write all this because of what follows; we who knew Doiran and the Struma

---

## IN SALONICA WITH OUR ARMY

---

clung, rightly or wrongly, to the belief that an advance from Salonica could only be made across that unknown terrain by Monastir. We knew the difficulties of our own ground, and to us they appeared insuperable. If they were, and if in spite of them an advance was still expected, then it appeared to us that it could only be made by Monastir. We could come to no other conclusion.

From the hills that rise eastward of Janes you may study the surroundings of Lake Doiran and there is nothing in the study to bring any comfort. To be sure there is a railway. There is the leisurely single line that threads its way between the low hills to Salonica, a line afflicted by unusual gradients so that trains quite commonly pause to reflect at various points on the journey. Still it is a railway, and it brings up material far more easily than it can ever be taken to the Struma. But away to the north-west there is the knotted tangle of the relentless hills that fence and conceal the lake with our observation balloon swinging listlessly above

---

“ WHAT ARE WE DOING ? ”

---

them while aeroplanes pass to and fro and the artillery is muttering through the hidden valleys as Briton and Bulgar hurl ineffectual death at each others' positions.

Running south from the cluster of hills there is the mountain wall, and another runs due east. High mountains they are, steep and utterly forbidding. The only way to reach them is across the miles of parched and desolate plain and through the brown curves of the foot-hills where the enemy, from his prepared positions, can deal at leisure with his advancing foe. When they are reached they must be crossed—and we who have marched through Macedonia know what that would mean to an army that must trail the slow length of its transport behind it and must receive its supplies day by day. There are the men who went up into Serbia in the latter months of 1915 and shared in that retreat. They were journeying back towards the base. Each day's journey brought them nearer to their supplies—and they know what they endured. I wish I

---

## IN SALONICA WITH OUR ARMY

---

were in a position to tell the story of the 10th Division, but no one who did not share their suffering should venture to do so. But I have heard over and over again stories which drive home the truth that a modern army can only move effectually among mountains if it has such control of the ground that its transport can come and go without any other hindrance than that of the nature of the ground. That in itself is an enormous difficulty. There are only mules to bring up everything, and a mule can carry so little in comparison with the needs of a battalion with its rifles, its machine guns, and its thousand hungry mouths. In the days when war was a matter of skilful single shots it was very different. Directly armies began to be trained to get off fifteen rounds in a minute the problem of transport was created.

So, as I have said, there is no comfort in the sight of those hills round Doiran. One knows the nature of the fighting that is going on among them. It consists of industrious shelling of positions whose defences are as

---

## “WHAT ARE WE DOING?”

---

nearly perfect as possible. The Bulgar of to-day understands the art of digging. He makes trenches which are as effectual a defence against shell-fire as any in the world. He sits in those trenches and listens in safety to the tumult of our battering, while his own guns are splintering the rock about our positions in a similarly harmless fashion. Occasionally of course there is a raid. Some village or redoubt is selected for attack. There is artillery preparation, and the lines of men go out. But even if the attack is successful and the enemy is driven out of his position there is rarely any attempt to hold the ground which has been gained. It would not be worth the probable cost, and the raiding party returns to its own lines. On either side a few are dead or wounded, and that is all. Except in the balance of the casualties there is neither loss nor gain, and what is it in a war of these dimensions if, two or three times in a week, you put twenty of the enemy's men out of action at the cost of losing ten of your own?

---

## IN SALONICA WITH OUR ARMY

---

And that is all that the war on the Doiran front amounts to. Occasionally of course some one is careless and pays the penalty of carelessness. Our artillery may catch a body of Bulgars on the move in the open and cut them up, or a Hun observer may see a few of our men in an exposed position and signal back the tidings to a battery so that a minor massacre follows, but there is nothing decisive about such fighting. Progress is not made on either side. There is neither advance nor retreat and the battle hangs in long-drawn indecision.

One day after lunch some of us were sitting on a high bank there by Janes looking across towards Doiran, and asking each other the everlasting questions—when should we get to the war, and when would the Salonica armies really begin to do something. There came a little silence, after we had been trying to persuade ourselves that something really might be accomplished in the direction of Doiran, and suddenly a keen-eyed member of the party pointed to a little procession

---

“ WHAT ARE WE DOING ? ”

---

that was threading out to the plain from among those distant hills. There were guns drawn by great motor lorries with other lorries dragging the limbers. “ Those are six-inch howitzers,” he said, “ and that will tell you whether there’s any hope of advancing that way. Do you suppose they would be bringing them back if there was a chance of doing anything ? ”

His assumption may have been wrong, of course. The guns may have been simply worn out, or there may have been high strategical reasons for moving them, but we could only see in that procession the doom of a dream, the shattering of a vision which we had tried to conjure up for the comforting of our hearts. It is not easy to be patient and to wait as we had waited through so many months for the chance of doing something, of accomplishing the work for which we had left our homes and all the dear circumstance of our living.

So one came to hopelessness at Doiran, and one came equally to hopelessness on the

---

## IN SALONICA WITH OUR ARMY

---

Struma. There is no need for me to tell again the story of the Seres road. I have written enough already of that unhappy highway which holds back our forces on the Struma as by a leash. But even if the Seres road were a railway up which supplies could be rushed hour after hour, what could we do in that broad valley?

It is, of course, certain that we could occupy the length and breadth of it. That is beyond all dispute. That broad, level plain offers no obstacles which could restrain the skill and valour of our troops. We could occupy all the little toy-shop villages. We could take again Seres and Demir Hissar and Fort Rupel—and then our troubles would begin all over again. Once more we should find ourselves opposed by the mountains. The wall runs north and south along the eastern side of the plain, and east and west along the top of it. Any advance through the occasional valleys would be commanded by the hills. Before anything of importance could be done it would be essential to clear the

---

## “WHAT ARE WE DOING?”

---

hills, and if the past is anything to go by, that alone would entail months of desperate, costly fighting among the hills themselves, fighting in which the enemy would have all the advantages of prepared positions on a high ground. There is no need to write of the matter in technical terms, for it must be obvious to every one that if the enemy has been preparing to hold a hillside for months, the odds are all on his side.

Sometimes when we were sent back towards the sea for a spell of that peace-time soldiering of which I have written, we used to rehearse mountain warfare with a mighty effort to persuade ourselves that at some time or another it might be necessary to have skill in fighting an advance through the hills. Mountain warfare is a fascinating game, but when it is carried out—as on active service it must be—under the burden of full equipment with the weight of ammunition and the emergency ration thrown in, it is apt to be exhausting. The essence of it, so far as movement in hilly country is concerned,

---

## IN SALONICA WITH OUR ARMY

---

is the business known as picketing the heights. Before the column—be it company, battalion or brigade—can advance, the commander must be assured that the enemy is not holding any of the high ground which controls his line of march. Accordingly parties are sent out whose business it is to occupy all the hills which line the way. It is not sufficient to be on the ridge immediately above the road. Usually the next ridge must be explored as well, and a wide stretch of ground must be occupied on either side of the road.

That entails, as may be imagined, a tremendous amount of clambering up and down the most offensive slopes. It is hard work and it is also slow work, and the men on the road below cannot advance more swiftly than those who are toiling above their heads. In hostile country a fight may be necessary at any moment, and if it should develop into a battle the attacking party has the discomfort of knowing that the defenders are thoroughly acquainted with the ground and have had time to make their dispositions. There

---

“ WHAT ARE WE DOING ? ”

---

are all the details of surprise and ambush to guard against, and that is no easy matter on broken ground in these days of long range fighting, when an unsuspected force may come into action from a point half a mile away and pour destruction into the ranks of their enemies. To be called upon to defend a position in a hilly district is a sort of Bank Holiday of warfare ; to attack such a position is the hardest and deadliest kind of work.

It calls moreover, if it is to be successful, for an immense disproportion in point of numbers. It is useless to attack among the hills if you are only equal in strength to the enemy. You must have numbers so that you can surround him, distract him by flank attacks, worry him into making mistakes. You may be very sure that he in his turn will do his best to distract and deceive you, and again the advantage is with him, for twenty rifles cunningly posted in a defensive position will usually appear to belong to a much larger body of men and attract an amount of attention out of all proportion to their importance.

---

## IN SALONICA WITH OUR ARMY

---

And it must be remembered above all that in this Macedonian warfare our men have to be brought over thousands of miles of land and sea, while the enemy are in their own country. The supplies for our men have to make as great a journey as do the men themselves, while the supplies of the enemy are close behind them. The lessons of the South African war have, surely, not been forgotten so soon? We could not advance through those hills except in vastly superior force and at great cost. And meanwhile, is there no need for our troops upon another battle-front? Even if we could civilize and harness the Seres road, if we could pour up it so great a supply of the munitions of war that we could sweep the enemy out of the Struma valley—what then?

Without doubt, given men enough, we could push on and take Fort Rupel. We could in time, and if we were prepared to pay the price, fight our way right up into Bulgaria and inflict defeat on the forces of King Ferdinand. We could kill large numbers of

---

“WHAT ARE WE DOING?”

---

Bulgars and win a sort of local victory—all these things could most certainly be done.

But it has not appeared in the course of this war that victory is to be won by killing and defeating Bulgars or Turks or any sort of men but Germans alone. We knew that quite well even while we were fuming on those hills, waiting for the fighting which was never given to us. Again and again I have heard it—“What’s the use of killing those chaps? Germany doesn’t care a rap about them. Now, if they were Huns. . . .”

So there was no more pleasure in the sight of the Struma valley than in the sight of Doiran. Now and then of course we would construct visions and dream vaingloriously, but in general we knew and our hearts admitted that there was no hope in this direction of a big advance, no hope that we might have a share in a great campaign, no hope that we should ever have anything but a hand in the dull business of bothering the Bulgar day by day. That, of course, is a job which we can and do accomplish. It is going on all

---

## IN SALONICA WITH OUR ARMY

---

the time with more or less intensity. Down on that plain there is a certain amount of fighting, more in quantity and generally more urgent in quality than in the Doiran neighbourhood. Our lines have been pushed forward and progress has been made, but it is necessary to point out that there are limits to this progress. As I have said, we can occupy the valley. What the advantage will be to us when we have got it and what we shall do next I do not know.

When the question is "What are you doing?" The only possible answer is "Bothering Bulgars." When it is "What are you going to do?" I can only imagine and suggest that it is our business in life to go on bothering Bulgars. It is not an immensely inspiring business but it is, I suppose, all a part of Armageddon. Certainly we must have kept occupied enemy forces which would have been getting into mischief elsewhere if they had not been compelled to look after us. Whether they would have done more damage elsewhere, and whether the troops composing

---

“ WHAT ARE WE DOING ? ”

---

the Salonica forces would have been more useful elsewhere are questions which I am not able to answer, since the answers must be based on greater knowledge than I possess.

It is certain however that any who consider themselves entitled to give these answers must first take into account the facts which I have mentioned in these pages. The Salonica adventure has entailed bringing troops on a great journey from their own lands. It has kept hundreds of ships busy bringing them supplies across a perilous sea. It has exposed the men to great perils of disease, and it has turned their hands from fighting to the work of making roads through a stubborn and trackless country. In return it does not appear to have made it possible to strike any vital or even very serious blow at the chief enemy of the world. There may be considerations to counterbalance these, but I do not know nor can I guess what they are. Most of us, however, who have gained an intimate knowledge of Macedonia are willing to hazard a guess that the authorities who sent

---

## IN SALONICA WITH OUR ARMY

---

us there knew very little about the country, had no idea of the damage that malaria could do to Western troops, and did not dream that the land would soak up man-power as a sponge soaks up water and give so little in return.

## CHAPTER XIX

### WHEN PEACE RETURNS

**I**T seems worth while to inquire if the Salonica expedition will always appear to have been as unprofitable an adventure as it does at present. Just now one is compelled to regard it from the military point of view. Doubtless there is, even to-day, a political aspect of the affair. One may admit that probably the politicians had what appeared to them to be excellent reasons for sending us to Macedonia, but at the time of writing they have not disclosed those reasons, so it is impossible to say whether or not they have been justified. That being the case one can only regard the military results.

These in their broad aspect are known to the world. Our troops arrived at Salonica in the autumn in 1915 in time to push up

---

## IN SALONICA WITH OUR ARMY

---

into Serbia and to take part in the retreat of the Serbian army. The following winter was employed in constructing and strengthening the actual defences of Salonica, and then with the return of fine weather the Allied forces pushed forward to the positions which they now hold. The area which they control would of course have been much greater if the Greeks had not so obligingly presented the enemy with Seres, Demir Hissar and Fort Rupel. Later in 1916 a move was made westward to Monastir. Salonica provided a base where the remnants of the Serbian army could be gathered together, reconstructed and put into the field once more as a fighting force. That recreated army was enabled late last summer to approach once more the borders of its own land, and to renew the conflict with its foes, assisted by a portion of the Allied forces. Meanwhile the remainder of those forces were engaged in very minor operations on the rest of the front, and in the making of roads and preparation of defence works.

---

## WHEN PEACE RETURNS

---

In consequence of these operations, an enemy force composed chiefly of Bulgars was compelled to remain on the defensive round the area which we occupied, and that is the only result of military importance which appears to have been achieved. Whether or not it was worth what it cost is a question which will not be answered till, when all the confusion of war is cleared away, the knowledge which is now hidden is made public and it is possible to make up the accounts of the whole business. Doubtless the presence of our armies in Macedonia has had considerable effect on the plans of the enemy. The question will need to be asked later on whether that effect would not have been the same if we had been content to occupy at far less cost in men, munitions and money, a mere ten-mile radius round Salonica instead of the wide area where our men, enlisted to fight, have been toiling so industriously as navvies for so long.

But since we have occupied so much of the country it is possible to ask whether that

---

## IN SALONICA WITH OUR ARMY

---

occupation will have any results beyond those which are merely military and temporal in their nature. This is the kind of thing which is, of course, the business of politicians. It might be argued that soldiers have suffered so much at the hands of politicians in this war that they ought to be glad of a chance to return the invasion and trespass on the politicians' domain. I have, however, no desire to do anything of the sort. I do not want to ask whether Macedonia should be returned to Greece or left in the hands of some other Power. I have no suggestions to make about boundary lines or treaties after the war. But I do want to say some things which will be in the hearts of very many thousands of our men when the time comes for them to leave that wasted land. They are things which an Englishman can scarcely keep from saying. We belong after all to a race which has been busy for centuries over the task of making the wilderness to rejoice and the desert to blossom as the rose, and it has become a habit with us.

---

## WHEN PEACE RETURNS

---

That habit is woven into the texture of our life and thought to such a degree that it is not possible to remember Macedonia without a kind of fury rising in the heart. There is a country which might be a paradise and it is practically a wilderness and that is an abominable thing. The sight of the great waste stretches of the plain is detestable, and there is never any escape from the meaning of them, for they sweep right up to the edge of the cultivated patches round the villages where the tall maize stands, bearing its crops in richest profusion. There are the vineyards on the hillsides, planted at random on slopes which are otherwise barren, but similar in all respects save that of usefulness to those harnessed and profitable patches.

Think for a moment of the contrast that is forced upon the minds of our men as they pass from Macedonia to Malta. They leave the fertile desert and come to the island shaped out of inexorable rock. They leave the land where a wretched and sullen people neglect the wealth at their doors and come

---

## IN SALONICA WITH OUR ARMY

---

to the place where, from a few cartloads of imported earth spread on a ledge of rock the farmer raises four crops in the year. They leave the country where there is nothing but silent squalor and come to the island where men and women are smiling and gaily going about the business of their lives. You cannot wonder if we who have seen that contrast are wrathful when we think of Macedonia.

I explained at the beginning of this book why it is that the land is a wilderness. It is the victim of its history. The blame lies altogether at the door of those ceaseless conflicts which have swung to and fro across its hills and plains. It is not on a battlefield that men will plant vineyards and plough the land for corn and establish flocks and herds. Before these things can be done there must be security and the comfort of peace. And I am wondering if, as a result of our visit to that land, it is to obtain rest at the last.

It must be remembered that our labours, if they have done nothing else, have stretched

---

## WHEN PEACE RETURNS

---

the framework of civilization across the country. We have made those roads. It is true that we made them for the service of war. We made them in order that we might the more easily move our guns and our shells and our grenades about the country—but the roads will remain long after we have gone, apt for the service of peace. You remember how the Romans built the lines of march of their legions across the world of their day, and you know how those roads of theirs served the labours of peace throughout the centuries and still do serve.

Of course the Macedonian of our day dislikes our roads. The bullocks which crawl along with his queer little creaking wagons go with unshod feet, and the wagons themselves have wheels with wooden tyres. For centuries his roads have consisted merely of tracks of beaten earth, soft underfoot. Our roads have their foundation of rock with their layer of broken stone, and they are too hard for his liking, for the feet of his cattle, and for his wheels. The consequence is that

---

## IN SALONICA WITH OUR ARMY

---

where our roads follow the course of a native track you will find that wherever possible the track runs beside the road, and the people of the country will go any reasonable distance out of their way to avoid using our roads.

But it is merely a matter of custom, and custom gives way rapidly enough to advantage. If the Macedonian found that it was advisable to carry his goods about at a slightly swifter rate than his present mile and a half an hour, it is not to be doubted that he would adopt iron tyres and more expeditious cattle and find the advantage of our roads. In time he would learn to keep those roads in repair and to extend them.

It is difficult, if not impossible, to disentangle cause and effect in these matters. When a certain point is reached in the development of a country, roads create traffic as surely as at an earlier stage traffic creates roads. If you have in existence a good road running through fertile country, the enterprising man comes along, sees the road and the excellence of the land, and decides to

---

## WHEN PEACE RETURNS

---

settle down.. "I can get my goods to market easily," he says to himself. "I will cultivate this land and raise great crops and grow wealthy." Naturally, since he depends so greatly on the road he takes an interest in it. He is concerned about its upkeep. By and by he enlarges his estate and contrives to get a branch road made leading to his outlying land, and so the process continues with constant action and reaction, and the highways are woven into a net over the face of the country.

So may it be in Macedonia, if only the country can be defended from war. The question which rises to the mind is whether we who have seen the land shall be sufficiently interested in its future to bestir ourselves in any way at all to secure that future. I believe that we shall.

In earlier days and in other parts of the world the mere sight of such a country has been enough to make Britons decide that here they would rest and build their homes and dwell for the remainder of their time.

---

## IN SALONICA WITH OUR ARMY

---

There are places in those valleys and on the slopes of those hills where a man might make a good life for himself. Not all of Macedonia is blasted by heat and poisoned by fever. In the heart of those hills across which the Seres road passes there are valleys of an indescribable loveliness, some with tree-clad slopes, some with deep rich turf sweeping down to the edge of unfailing streams. There is land suited for the growth of many desirable and valuable things, and land where sheep and cattle might flourish. Among those hills there is shelter from the heat and it is possible to make provision against the storms of winter. It is a country where one looks to see the roofs of great houses shining through the trees, but of the habitations of men you will find nothing but the jumble of some miserable village.

Less beautiful but even fuller of the promise of wealth are the plains. Here, of course, there is the problem of fever to be faced, but modern science has proved itself equal to the task of abolishing malaria from

---

## WHEN PEACE RETURNS

---

other lands, and the same thing could be done here. It would be quite possible to rid the country of that plague and to make it a fit habitation. Life on the plains would always be less comfortable than life among the hills simply because the extremes of climate would be more keenly felt, but with a good house and cultivation and attention to the insect pests it would be tolerable enough. The possibilities of great harvests can hardly be exaggerated, and there is a vast area waiting for cultivation.

But of course everything depends on security. Even in time of peace there would, under present conditions, be trouble with tax-gatherers and other petty officials. The administration of the land appears to be rudimentary but thoroughly Eastern in its nature. There are the usual details of tyranny and corruption with all sorts of robbery and cheating. It is quite certain that any one from a strange country who came to live in that land would be regarded as fair game, and the existing legal machinery would not

---

## IN SALONICA WITH OUR ARMY

---

give him any protection worth having, except at a ruinous price.

So there rises a question in the mind as to whether the Western nations which have seen the land and know something of its possibilities will think it worth while to keep an eye on things for the future. It seems very probable that the Balkans will be less of a sealed book in years to come. For so long the Serbs have been intimately associated with their Western allies and their children have found temporary homes in our lands. Now we have the Roumanians with us, and it is only to be expected that this alliance in time of war will lead to closer association in time of peace. Moreover, the German influence must be banished for all time from the Balkan peninsula, and that in itself will make for peace. With the passing of that influence and the expulsion of the Turk from Europe there may well open in the Near East such a period of peace as those lovely, troubled lands have never known. Set free from the burden of war, furnished with new ideas of justice and

---

## WHEN PEACE RETURNS

---

new ideals of conduct, the people of those countries may wake to a way of life in which slaughter and the blaze of burning homes will have no part.

Whether or not this will be done depends very largely on England and France. No doubt the terms of peace at the end of the war will create the circumstances favourable to this change, when the Turk is driven back to Asia and the claws of Hohenzollern and Hapsburg are cut. But there will be a need for something more. It will not be enough to define the terms of peace and 'to let them work themselves out. There will be required a keen and intelligent sympathy extending through the years, a real interest in the hearts of French and English people in the affairs of Serbia, of Roumania, and of this other land which we have sealed to ourselves with the blood of so many of our men. There has been general recognition of the fact that the Allies owe it to ravaged Belgium to lend all possible aid during the period of rebuilding and reconstruction which must

---

## IN SALONICA WITH OUR ARMY

---

follow the war ; let us not forget that we owe a similar duty to those two Balkan nations. For they, too, have suffered and continue to suffer to a degree which we have not experienced, and they are suffering because they chose to stand with us in the day of necessity.

And if the rest of you forget, then we who have known these lands must try to remind you. There will be, of course, a great many things for you to think about, things close at hand. There is Belgium on the threshold of our home ; there are all the miles of France which have been made desolate. You may have some difficulty in remembering those little nations three thousand miles away. You may even forget that the hills and valleys and plains of Macedonia hold our dead in keeping.

But we shall not forget. We have seen and known. We have watched the Serbs, those very gallant soldiers with their trim uniform and their fine, clean-cut faces. We know, too, what manner of country it is there

---

in the south-east, and how the little streams run among the hills. We shall remember Avrasil, Tahinos, Lajna and Likovan. We shall see with the clear eyes of memory the picture that spreads before you when you stand high on the hills with all the Struma valley spread before you. We shall be thinking of the vineyards that clothe the hills above Kireckoj, of the great wealth of the maize which fences the way as you ride from Ambarkoj to Salamanli, of such valleys as that secure and happy place where I found the two women and the man with the two great black pigs gambolling round them. We shall not forget that these are lands where a happy people may dwell in peace, serving their generation.

And remembering we shall speak to remind you, and you will have to forgive us if at times we seem to be a troublesome people concerned with unimportant things. For indeed they are not altogether unimportant. It is not unimportant that a fertile land should lie waste and be desolate. It is not

---

unimportant that the highways which have been made should be allowed to fall to ruin and give no return for all the labour which flung them across the hills. It is not unimportant that the graves of our men should be forgotten in the wilderness out of the way.

These things will certainly happen if we fail in our duty. There are so few people in the country and they are so depressed and poor that it is not likely that they will ever make any great effort to help themselves. If they are left unheeded the future will be very much as the past has been, even though there may be no more war in the land, no more scattering of the bones of the dead on the little hills. Seedtime and harvest will still be confined to the tiny patches round the villages. The children will still play furtively between the houses till the passing years warp them into premature and unlovely age. The great spaces of hillside and plain will still be barren and unprofitable. The floods will tear our roads from their foundations and level the mounds that cover

---

our dead, and of the little crosses there will remain no more than a few fragments of rotting wood.

It need not be like that. If we, the people of the West, decide to have it in remembrance, it will not be like that. If some of our people were encouraged to make their homes in the land, if our scientists took its problems in hand, and our Governments lent their aid and watchful supervision a new Macedonia could be created. One can imagine a process of colonization, spreading first into the hills along the roads which exist to-day, and occupying the plains when they have been cleared of disease. One can imagine the present inhabitants learning in time that after all there is comfort in cleanliness, that it is not necessary to be ugly, and that an upstanding, well-built house is a better habitation than a hovel with mud-plastered walls. One can imagine the country sending out its merchandise, its rare and delicate products to all the earth. One can even imagine Salonica clean, smiling and beautiful.

---

If these things happen it will not matter in the very least if the slight fences round those remote burial grounds of ours fall into decay, if the mounds are obliterated and the little crosses are rotted into the earth. For all the land will be there to prove that the lives of our men were as the seed which is sown ; Macedonia itself will be the sufficient memorial of their generation.

THE END.
